BRIGHAM YOUNG COLLEGE

Pioneer Institution of Higher Education in Northern Utah—Twenty-second Academic Year Begins September 18th—Courses of Instruction, Facilities, Etc.

The twenty-second academic year of the Brigham Young College begins Monday, September 18. The following courses are offered: (1) Course in General Science. Four years. (2) Course in Arts. Four years. (3) Academic Course. Four years. (4) Normal Course. Four years. (5) Sub-Academic Course. One year. (6) Normal Improvement Special Course. (7) Sunday School Normal Course. The courses in

GENERAL SCIENCE AND ARTS

correspond to the usual courses of the higher American colleges, and lead to the baccalaureate degrees B. S. and B. A. respectively. These courses are designed to furnish a liberal and thoroughly effective undergraduate training in science, embracing the natural sciences, mathematics, history, languages, and literature. The new series work in historical and literary subjects is the distinguishing feature of the course in Arts, while scientific subjects characterize the work in that course. All of the subjects of these courses during the freshman year are prescribed, the students being individually free as opportunity to observe the regular work, and later to select in part from the elective subjects offered under the principles of suggestion given in the catalogue. The work in physics, chemistry, and biology is conducted in modern laboratories, with extensive equipments, and about the buildings is the experience of the students in exploration and observation. The time thus devoted to teaching under the supervision of specialists is exceptionally valuable, many teachers lose years of unaided experience.

The completion of the Normal Course insures thorough preparation in all the subjects required for Class Certification and State Diplomas. The

SUB-ACADEMIC COURSE

is designed to prepare young men and women of mature years who have been deprived of educational opportunities, for admission to the Normal, Academic and Scientific courses. Those who are prepared to all but one or two of the studies required for entrance upon these courses may be admitted conditionally, and allowed to take the work in which they are deficient in the Sub-Academic Course. The

MUTUAL IMPROVEMENT NORMAL COURSE

is especially adapted to the needs of young men and women of mature years, who have been deprived of educational opportunities, and who desire to prepare for Normal and Academic courses. Those who are prepared to all but one or two of the studies required for entrance upon these courses may be admitted conditionally, and allowed to take the work in which they are deficient in the Sub-Academic Course. The

SUNDAY SCHOOL NORMAL COURSE

is designed to prepare students to enter the College courses in General Science and Arts, and to furnish to those who can attend school but a few years a good general secondary education. Those who complete this course are prepared for the best success and usefulness of the country. The general aim is the

NORMAL COURSE

to be useful to students for the profession of teaching. The regular normal work is so combined with music and religious instruction, and with literary, industrial, and scientific work, and so adapted to be home and school improvement for teachers, as to be practical, but comprehensive enough for persons to carry on years in back. There is a great demand for well qualified teachers, principals, and superintendents. As a whole, lawyers, engineers, physicians, and others need their professional training or course before entering successfully upon the work of their respective professions. In the modern progressive society, most lawyers a thorough and extensive course in a well equipped school before undertaking successfully the study of the profession and study the work of the school.

Beginning with the elementary course of the third year, the preparatory work in the Normal Course extends through two years, and includes a thorough review in the principles and practice of teaching, school organization, and school management, the fundamental laws of mind development with reference to their application in teaching, with the history and principles of education. In course, 9

NORMAL TRAINING SCHOOL,

is organized for the College. In this school each grade is in charge of an experienced critic teacher, chosen with special reference to her fitness for the work of her grade. Here the Normal students have an opportunity to observe the regular work, and later to teach in the school. Model teaching lessons are given, and the principles of suggestion are illustrated. Special attention is given to the management of children, and the application of the principles of pedagogy is illustrated in the management. This teaching is supervised daily by critic teachers and normal supervisors, who assist the students in the preparation of their work and criticise their exercises and methods. The time thus devoted to teaching under the supervision of specialists is exceptionally valuable, many teachers lose years of unaided experience.

The completion of the Normal Course insures thorough preparation in all the subjects required for State Certification and State Diplomas. The
