UNIVERSITY MELANGE.

Institution's Athletic Team Proud Over Its Victory at Provo.

VARSITY MUSCLE MUCH IN EVIDENCE.

High School Boys to Spring Another Historical Show on the Public—Red and Black Pitchers of Poetry.

Proud are the Varsity students over their football boys. The good practice work and thorough training under Coach Wilson are converting the crude though excellent material of the team into a good, strong team worthy of taking its stand proudly on the Utah gridiron.

• • •

Though the boys in the game on Thursday with Provo went to the name of the Salt Lake Athletic team, it was practically the University team, as there were only two outside players among them. It is an honored rule of the University Athletic association that none except Varsity students can play on the University team. Because of this rule of long standing, which dates back to the days when Brigham Young, Sr., was president, no matter how often taking temporarily a couple of players outside of the school.

• • •

The boys are confident that this season's outcome begins an epoch in athletics, and gloriously.

• • •

The superiority of Varsity muscle over High school muscle was clearly demonstrated in the game between the junior teams of the two schools. The No. 2 High school team was somewhat heavier and had three players on it from the first team, the Varsity 2 team depending for their weight and their muscles of iron and irresistible spirits.

• • •

The Chronicle social of last Wednesday evening will be remembered as one of the most pleasant social gatherings of the students. A large number were present and enjoyed the listening and dainty refreshments prepared by the college women. Probably demanded lectures were arranged on each side of the large art room, where dainty and delicious wares were offered for sale and drank. The door receipts will go to the Chronicle fund.

• • •

The Christmas holidays of this year have been changed from two weeks, which was to be the length, to one week. This change has brought much disappointment among the students, especially among those who are outside of the city. A petition in favor of being granted another by energetic students, taking from the extra week Henry student in the University will undoubtedly sign the petition.

• • •

During the last few days heavy drays have been passing between the station and the University main building. The large mineral exhibit, held at the Omaha exposition, is being returned to its place in the museum room.

• • •

The University Chronicle has always been a paper of the students, and by the students, and it has always been the Professors of the American press in all matters. In one case some the students were reminded of this fact, and were invited to contribute their opinions on any subject of general interest to the student body.

• • •

Bishop Whitney spoke to the large gathering of students at chapel exercises last week. His subject on Wednesday morning was on praise and thanksgiving.

• • •

Dr. Talmage and Miss Babcock took part in the thanksgiving exercises at Sugar House ward yesterday forenoon.

• • •

From Sergeant Russell, a former student now at Manila, it is learned that Miss Ruth Kirkpatrick, also a former University student, had arrived at Cavite from Hongkong, and was getting up a sailing party to go over to the Philippines to see some of the soldier boys of her acquaintance.

• • •

The pen-name assumed by contributors to the Chronicle is Ande Yarro, meaning, Two very suggestive words appearing this year for the first time, are Philippine and Dewey. Ande Yarro, the pen-name assumed by contributors, is made up of the initials of the two football players, but more trading of Edna Carey, Ada Rudy, Ada Scrabble and Mrs. Handscomb appeared constantly last year as pen-names of Isaac Russell.

• • •

During the week the parents of the children of the first grade spent a day at the training school. After some very interesting exercises of the pupils, Prof. Stewart and Prof. McKnight spoke a few words to which they emphasized the desirability of close relations between parents and teachers.

• • •

Mr. Horace Cummings spent yesterday and today at Marysvale county. Last evening he addressed the people of that place. Sunday afternoon he spoke to the teachers on the subject of nature study in the common schools.

• • •

Miss Hoff, the kindergartner of the Normal school, visited the kindergarten department and the training school this week. She was very much pleased with the modern methods of education practice in the training school.

• • •

Bishop O. F. Whitney was a visitor of the training school and of several classes of the University last Wednesday.

HIGH SCHOOL NOTES.

The committee of decorating the assembly room with portraits of great men has resolved to the formation of a committee to consider ways of carrying out the suggestion. Contests will probably be given, for which an admission price will be charged in order to purchase pictures.

• • •

The great success of the High School boys in their minstrel show of last year has not yet lost its influence. The boys are now working on a new entertainment, which, they say, will be a great deal better than their last one. The last, it will be remembered, was given at the Grand.

• • •

The second number of Red and Black was issued during the week. It contains one or two illustrations by Harry Pitts also some by Mr. Lovey. In the first issue the lack of poetry was complained of by some. But in this issue the young poets of the school have fairly monopolized the pages. Anyone who would think that spring were with us instead of the cold November days.

Bettie W. Tate, Will McCrea and Hermione Polson, all High School boys, and Ada James A. Garfield Lewis, boys, are now studying law at Cornell University.

He Protests.

Coalville, Nov. 22, 1898.

To the Editor:

I noticed in your paper issued yesterday an account of the Storing Coal company having brought twenty-seven Japanese to work in their coal mines, and according to the Sanpete Democrat which you copy, it appears they could not get good miners in the State, and they had been suffering for want of miners for the past six months. Now, we know many good miners have been looking for work during the past six months and some have left their families and traveled many miles to get work. The fact is they could have got their number of miners in Utah during the past six months, and many more, good and miners in this State, if they had been willing to pay miners what they are worth. Some good miners think it is right to make the miner compete in his labor with the Chinaman or Japanese or stand aside and let them do the work. This, I think, is wrong. Protection should protect labor. Protection should protect labor. This may apply to the Storing Coal company, but it does to companies in general that seek cheap labor.

JOHN ROBINSON.

SCIENTIFIC MISCELLANY

Autumn's Harbinger—The Carbon Dioxide Motor—Mania as Insect Parasite—An Improved Barrier Water Purification by Electricity—A Land Without Forests—Nitride of Calcium—A Curious Source of Poisoning—Inflammable Breath.

It is not to the calendar that we should go to find out the exact date of autumn's beginning, says Ave. There is no need of any such thing. Nature speaks to the birds and the spiders, who indicate the varying time with infallible precision. He was no winter prophet, however, is the caterpillar of the Gypsy Moth—a huge, evil-looking creature of reddish-brown hue, with a broad chocolate stripe running down its back. For three long years these obnoxious creatures infested the trunks of willow trees, feeding on the leaves, and making a light but sufficient coral on the wood which they left behind them. During this period they increase some 72,000 times in bodily weight—a rate of increase which would convert the 10-pound human baby into a monster of about 2115 tons. And then, always in the first week in autumn, they leave the tree forever, and wander hither and thither in search of a secluded nook wherein to turn to chrysalids.

Probably the most compact heat engine ever attempted is that driven by carbon dioxide. A horseless buggy of this kind exhibited by Mr. W. F. Roberts to the Franklin Institute had a boiler 24 by 14 inches in size, and a total weight of only 85 pounds. Yet it was claimed that the engine could develop a horse power with a gas pressure of 1,200 pounds per square inch. The carbon dioxide was contained in liquefied form in steel cylinders, and was heated on its way to the engine in a small coil of copper pipe.

• • •

The later researches of Surgeon Ross, of the British army, have not only proved that mosquitoes do not be derived from a mosquito site, but that the malaria parasite is mostly one of insects and only an occasional visitor in man. Particular species of malaria parasites were demand particular species of mosquitoes—a fact at least partly explaining apparent vagaries in the distribution of varieties of malaria. When all is known, Europeans may be able to live in climates now made deadly by this pest.

• • •

The new primary battery of O'Keenan, claimed to be a cheaper source of electric energy than any other primary battery yet devised, has a negative plate of zinc, and a positive plate of spongy lead, like the negative of a lead accumulator. The lead plates are prepared for use by oxidizing in the air and charging with sulphate of lead in dilute sulphuric acid. The necessary acid for electrolytic action is contained in the positive plate in the form of inert sulphate of lead, and in a fluid of water containing a little sulphate of zinc (there is no action on open circuit, the sulphate of lead being insoluble) but when the circuit is closed, the positive plate acts as a depolarizer, and the zinc dissolved in the sulphuric acid to form sulphate of zinc. The resulting cells are rechargeable by means of timed jous, and these are produced from the original cells by reversing the gas pipes on them. The battery resembles the Daniell cell in constancy.

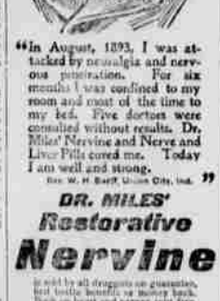
• • •

The pure water distributed to the inhabitants of Washington is that of Potomac, which is purified by filtration through beds of sand and the sedimenting ingredients by an electric current at a pressure of 100 volts. Nearly all the microbes are destroyed. The electrical plant has a capacity of about 15 horse power, and actually delivers 1,000 gallons of water per day are treated in summer and 15,000 in winter.

• • •

Cape Colony is almost treeless, its forests covering only 315,200 acres, or a little more than a quarter of one per cent of the total area. Sweden and Russia and Sweden each have 42 per cent; France, 16 per cent; and Great Britain, 4 per cent, per cent. The cost of Cape Colony is emphasized by the heavy importation of wood, and the conservator of forests urges that trees

Doctors Failed.



"In August, 1893, I was attacked by neuralgia and nervous prostration. For six months I was confined to my room and most of the time to my bed. Five doctors were consulted without results. Dr. Miles' Nervine and Nerve and Liver Pills cured me. Today I am well and strong.
Geo. W. H. Ball, Union City, Ind."

DR. MILES' Restorative Nervine

is sold by all druggists on guarantee, first bottle benefits or money back. Book on heart and nerves sent free. Dr. Miles Medical Company, Elkhart, Ind.

plantations be formed wherever the annual rainfall exceeds 25 inches.

• • •

Guinol, a mixture of gelatine with formaldehyde, is being used for substitute goggles to protect the eyes of workmen exposed to flying particles of stone, metal or glass.

• • •

French violin makers report that stradivarius, when used for stringed instruments, produces a richer sound than wood, especially with the higher notes, and the experiments with the new material have been entirely successful.

• • •

One of the products of the new chemistry opened up by the electric furnace is pure metallic calcium; M. Henri Moissan finds that on gently heating this in an atmosphere of nitrogen, the two combine, the reaction becoming so violent as a dark red heat that the whole mass is raised to incandescence. The resulting nitride of calcium is another remarkable new substance. It decomposes with water, giving off ammonia; it burns in oxygen, its specific gravity is 2.65, and it melts at about 2500 deg. C. A surface coating of it is found to give the yellow color usually described as belonging to the metallic calcium, the pure metal being quite colorless. The most remarkable property of the nitride is its reaction with water, which results in the production of ammonia, in exactly the same manner that acetylene is formed from calcium carbide. This reaction, M. Moissan believes, may become industrially important when the isolation of nitrogen from calcium in the electric furnace is sufficiently cheapened.

• • •

A problem for scientific men and mechanics has been raised by a British committee on dangerous trades. The cases of death or bad health due to lead is a frequent cause of lead-poisoning, and not less than seventy-four cases have been reported in one district during the last three years. A substitute for lead as a rest for the fiber in hand-cutting is what is wanted. Paper has been used in Germany for years, and clay and flint sand enclosed in canvas, wood, copper, vulcanite and various compositions have been tried, and quite a dozen have been tried and discarded; and zinc and pewter are too hard.

• • •

A curious experience is related by a physician of Meudon, France. To examine the throat of one of his children, he took a pocket knife from his open mouth and placed the handle of a spoon on the base of the tongue, when there was a sudden flash of blue smoke from the spoon, and the doctor's slightly burned. It is explained that the spoon probably produced a slight electric shock, which brought into inflammable gas from the stomach.

• • •

Common threads for incandescent electric lamps, giving a very brilliant light, have been patented in Germany. The threads are hollow, the cellulose being coated on a thin copper wire, which is evaporated at a bright temperature.

TAILOR'S
Art Cutting Class.
ACME SYSTEM.
Evening Classes.
Cutting and Fitting thoroughly taught by practical teachers; taught either in twenty-five every experience. Patterns: Measures, coats, vests, pants, ladies' jackets, out of Model patterns, reasoning in cutting materials, trimming, making up and finishing. An expert fitter will be in attendance. Call at the store. Terms moderate. Apply No. 9 Clawson House, No. 3 Third East.
