A PRAIRIE HOUSE.

It Is Especially Designed for a Flat Country and Costs $1,800.

Chicago, 5th, by American Press Association.

In a hilly or mountainous region like that of Switzerland, low and steep pitched roofs with wide projections of cornice, open timber work and picturesque brackets, windows, etc., seem especially suited to harmonize with the various features of the landscape. In the tropical regions steep roofs and verandas are a protection from the heat of the sun, are necessary constructive parts of a sensible design. The square house likewise seems at home with a view of being suited to the climatic requirements. A prairie country being devoid of hills, mountains or thick forests is apt to be swept by fierce wind storms and

PERSPECTIVE.

sometimes tornadoes, and the structure must be constructed so as to withstand the forces which it is liable to encounter. A fierce wind travels at the rate of about twenty-five miles an hour, a strong wind at the rate of thirty miles an hour, high wind at forty, storm at fifty, violent storm or severe hurricane at eighty, severe hurricane at a hundred miles an hour. From this it will be seen that the wind pressure is no important item which must be carefully considered and calculated in designing any important structure. In a prairie country a high building of any kind would be needed, as it offers too large a surface for the pressure of the wind, which in a storm is about eighteen pounds to each square foot of surface, neither should the buildings have wide projections of cornice for the same reason, as it would be in danger of being unroofed at any time during a storm unless some and expensive precautions have been taken in construction. It follows, then, that a low building with not slight proportions of surface is best adapted to a prairie country, as being most economical and safe.

The cottage shown in the illustrations represents a sensible, economically arranged and substantially constructed cottage or prairie farm house in the Queen Anne style of architecture. The foundations walls are of brick laid in cement mortar, plastered on the outside with cement, and the cellar has a concrete floor three inches thick. The sills are built of two pieces of plank, one, full laid flat upon the walls and firmly anchored in place by wrought iron bolts set in the brickwork, the other piece, flat, is set edgewise upon the wall and securely spiked to the flat beneath. The building is framed on the lower sill to come flush with the outside of the brick wall and sill and spiked to both pieces, thus securing the framework of the entire building from being torn from its foundations by the most violent storms.

FIRST STORY.

The framework should in be one, with tongued and grooved sheathing nailed on diagonally. In the cottage shown the sheathing was covered with waterproof building paper and clapboarded with six inch beveled siding. The roof is also sheathed and covered with waterproof paper and shingled with six inch clapboard nailed to roof in regions where are frequented by high winds, as the shingles lead under the pressure of the wind leaves the latter, and the rain or snow is driven into the building.

The building is one and one-half stories in height. The main roof over the second story chamber extends down over the front of the porch, thus forming in a most economical manner a small veranda which protects the front entrance. If desired, in the winter time this porch could be inclosed with glazed window sash as an additional protection. The staircase hall extends through the middle of the building, with a door at the rear leading to the yard. Upon the right of the staircase hall is a parlor 10x12, lighted by a window in front and rear, and two windows in the side. It is heated by a grate designed for burning soft coal—or it is so arranged that a stove can be used if desired. In the front, to the left side of the hall, is the dining room, 12x15, with windows in front and on the side. It is also provided with an open fireplace and grate for burning coal. The dining room communicates with the kitchen through the pantry. The kitchen is connected with the main hall by a door conveniently near the back entrance and

SECOND STORY.

is also finally lighted by two large windows. In addition to the pantry the kitchen is provided with a large store-room or essential feature, especially in a farmhouse. It is also fitted up with a portable range and outside door sills. In the second story are three good sized chambers, with closets for each. At the front of the hall is this story is a large close which may be used as a linen closet or trunk room.

The side walls and ceilings throughout are hard finished on two coats of brown material and lath. The steps and risers of the stairs are of pine plank, with walls and balusters of silk all other woodwork of white pine oil painted in two coats—both exterior and interior work. The building can be erected, under favorable circumstances, in a thoroughly substantial manner for $1,800. If a contractor is employed the expense, of course, would cost more than this. HAYNE H. HAYNOR.

If you get the color crazy in shortness breeding remember that fowl is now considered the true chickens color, and that hens and yellow legs are believed to be the animals that are best both for milk and beef producing.

Rabbits under which rats can harbor should not be allowed near the poultry house or yards. Rats often prove an destructive to young poultry.

HEREDITY IN HORSE BREEDING.

What Should Be Avoided in Trying for Animals Without Blemishes.

I cannot, as a veterinary surgeon, being this hastily thrown together, and to myself for from satisfactory, paper to a determination without endeavoring to impress upon you the above, how necessary for a proper direction of breeding from animals, either male or female, affected with disease of a hereditary nature. The Royal College of Veterinary Surgeons, at the request of the Royal Agricultural society, lately took this subject in hand, and after careful, deliberate and mature consideration, furnished them with the following list of diseases which, by a remarkably unanimous consensus of opinion, were declared to be undoubtedly hereditary: Blasting, in-kneeing, wheezing, side bone, navicular disease, curb, bone spavin, bog spavin, grease, shivering and cataract, and, under certain circumstances, splint, string halt, contracted feet, weak feet and tendon enlargements, such as thoroughpin and windgalls. You will do well, therefore, gentlemen, to look out for these maladies, and refrain from breeding from animals of either sex affected with them, or also from parents of faulty conformation or delicate constitution, there being quite enough misshapen and unsound horses in the world without your deliberately adding to the number.

A sad unfrequent cause of variation in type is traceable to the impression produced on the nervous system of the female at her first copulation, giving rise to the emerging of her subsequent progeny with one or more of the striking characteristics of her first mate. Many interesting cases of this natural phenomenon are on record, both in the equine species and in other animals, one of the most remarkable being that of a mare, which being bred in the first place to a quagga, invariably thereafter produced foals more or less striped.

While in Indiana and Kentucky I have frequently noticed horses on the street which at the distance of a block or two were hard to distinguish from mules, and on tracing them up when possible I found that the dams of such animals had in almost every instance been first bred to a jackass. I find this sort of variation frequently ignored entirely by the breeder for perhaps very indifferent and insufficient reasons, but when breeding to a type it should be by no means lost sight of.—Exchange.

Selling Spoiled for Cows.

The great object in combining cattle in summer and feeding them green crops is to save expense, and to obtain more profit from each acre on the farm. Pasturing is nearly always a wasteful practice, and a farmer cannot afford to carry it on where his land is valued at more than twenty-five dollars an acre. The average number of acres to pasture a cow through the summer is six, but if this same amount of land is carefully tilled it will produce sufficient food for three or four cows, not simply through summer, but through the winter as well.

There is some land which is not fit for tilling. The first crop that will be fed is rye cut green, which, if sown in August or November, may be fed to the cows early in the spring up to the first of June. After the rye the clover and orchard grass are ready, and then the corn and peas come in succession, keeping the cows supplied with succulent green food right through the spring, summer and fall. The silo should also be brought into use for preserving some of the green food for winter use, and the dairyman can then keep up the milk flow by supplying the animals with the very essential food for milk making.

In selling the land for the cows some good system should be adopted which will save all the time and labor possible. The feeding racks should be so near the center of the field as convenient, and the whole land divided up in sections. One section then should be planted with early grass, another hard corn, and others with summer hard corn, and peas, so that new crops will be coming into maturity as one is fed to the animals. The disadvantages of the selling system are greater labor and time, but the advantages are economy in feed and an increased amount of fodder, and a saving of all old manure.—E. P. Smith in American Cultivator.

Fattening Pigs.

Now I have learned by experience that it is not profitable to pasture hogs on land that will produce twenty-five bushels of wheat per acre, and that it is not necessary that hogs should get to the ground if properly fed, which means that they should get the thing a hog's appetite craves. That there is profit in hogs I can prove. Most of my hogs have never had their feet on the ground, because I have so had cheap enough to pasture them except the stubble fields. I usually get quite a fine growth on the pigs while on them. Corn here is worth twenty-five cents per bushel, and toddlings eighteen dollars per ton. I usually give the young pigs middlings at the start. From grinding corn and soft together I save ten pounds of corn meal on every bushel.—Cor. Rural New Yorker.

Points of Interest.

In entering on the business of horse raising, decide first what breed you will chiefly produce, and then it is well to stick to that as the main branch of your business, if you find you have hit it. In deciding between draft horses and coach horses, this is to be remembered—there is more profit in coach horses than in draft horses, but they are more trouble to train.

Remember to cull out the inferior from your flock of sheep at least twice a year and feed them and sell them. Furthermore never raise any lambs from weak and scrubby ewes.

Cattle may be fattened successfully any time of year enough to fly time. The saw is the best tool for performing the operation. The horns of calves may be killed when the animals are two or three months old and then all further operations avoided. In time, horns could be bred off cattle altogether.

We Each Draw Some In.

Even in ordinary life contact with better natures arouses the feeling of moral power and quickens the conscious sense of responsibility; and when union with the Son of Man is the basis of our religion, all those natural influences produce the highest conceivable effect. We each draw from fellowship with the perfect life that which is our little lifeupwhere for its existence and growth.—Canon Westcott.

Everywhere Intermission.

Billy Florence, the actor, when in Chicago related with no little mirth the following tale:

"It occurred to me a number of years ago," he said. "I was on my way with my company from New York. On the train I had struck up an acquaintance with a pretty little lady who was traveling by herself, and it was not long before we became fast friends, although neither of us knew the other's name.

"Just before we rolled into Chicago I caught her looking very intently at me, and I asked her what she was thinking about. She blushed as if detected in a guilty act, but upon my repeating the question she said hesitatingly:

"'Nothing very much, sir. I was only thinking how much you looked like somebody.'

"'Who is it?' I asked.

"'Oh, I don't like to tell you,' she replied. I again asked her to tell me the reason.

"'Because,' she replied, 'he is not a nice man. He is only an actor, and his name is Billy Florence.'"—Chicago Post.

A SHAMELESS SWINDLE.

Positively No Cross Can as Will Exhibit Here in August.

To the Editor.—The announcement "(Neither Early in August," means, by the so-called Forepaugh show, or what is left of it since at Adam Forepaugh's death, it passed into the greedy hands of the late Barnum Bailey—the McGinnis-Bailey, is a swindling lie, deliberately and maliciously published for the sake of cheating and robbing the residents of Salt Lake City and vicinity. The actual, absolute, undeniable fact is that the so-called Forepaugh corker of the Barnum-McGinnis Trust Octopus, is coming from the East, is now called for Cheyenne, Friday, August 21, and then goes West over the Union Pacific Railroad, exhibiting at Butte, Montana, August 28, and at Portland, Oregon, September 12.

Any schoolboy can see that it is an utter impossibility, even if it intended coming to Salt Lake City at all, for it to reach here in August, as falsely advertised, or before about October 1, when it would be a five-cent visitation, full of danger, disappointment and unpleasantness.

This problem forces itself upon popular consideration:

HOW CAN A SHOW EXHIBIT IN OREGON AND UTAH AT THE SAME TIME?

If the so-called Forepaugh concern, or what is left of it since Adam Forepaugh's death, cannot promptly, plainly and satisfactorily answer this fair and pertinent question—and under the circumstances there is no alternative but for it to openly and honestly declare the precise date in Salt Lake City, if it had one—is it not proof positive that either it wantonly lies about coming in August, or else it is a divided show, offering you a mere fractional fragment in place of a rounded feast?

Furthermore, is it not UNCHARITABLE SHOPKEEPING to thus juggle with and betray the public, who are fraudulently importuned to perpetrate the extreme folly of foregoing a delightful visit to a much greater show, the only great one that ever has or ever will exhibit in this section; universally known and acknowledged as such; whose reputation for grandeur, elegance and honesty is as firmly established as the foundation of the Rockies, and which you know will positively exhibit at Salt Lake City, on Wednesday and Thursday, July 15th and 16th, in every respect just as advertised?

Finally, is anybody fool enough to believe that with our positive date staring it squarely in the face, the dead Adam Forepaugh so-called show, or what fragment of it may succeed in wallowing here through the snow drifts, would not publish the August date if it had one? Adam Forepaugh is dead, and it is a dead skin.

Respectfully yours,
HELLER BROTHERS.

ANNUAL STATEMENT

For the year ending December 31st, 1890, of the Condition of the

Equitable Life Assurance Society
OF THE UNITED STATES,

Made to the Insurance Department of Utah, in pursuance of an Act entitling to Life Insurance Companies, approved March 7th, 1885.

Name of company and location.
The Equitable Life Assurance Society of the United States, 120 Broadway, New York City.

The amount of its Assets is $120,862,702 16
The amount of its Liabilities is 20,062,127 16
The business done all in the Life Insurance Department is as follows:
Amount of Policies issued and taken for the Territory of Utah, comprehending the number of persons in any joint accident insurance policy counted as one person $1,204,000 00
Amount of Policies in force in the Territory of Utah 6,204,000 00
Amount of premiums received in the Territory of Utah 20,000 00
Amount of losses paid in the Territory of Utah 0
The amount of its outstanding assets in the Territory of Utah, consisting of cash in the hands of agents, cash in course of transmission, and premium notes and loans secured by policies in force 20,000 00
The amount of its assets in the United States 25,000,000 00
The amount of its liabilities in the United States 20,000,000 00

STATE OF NEW YORK, }
County of New York, } ss.

John A. McCall, Comptroller, and William Alexander, secretary of the Equitable Life Assurance Society, being duly sworn, depose and say that they are the above mentioned officers of said company, and that the foregoing statement of the general condition of said company on the thirty-first day of December, is correct, according to the best of their information, knowledge and belief, respectively.

JOHN A. MCCALL,
WILLIAM ALEXANDER.

Subscribed and sworn to before me, this eleventh day of February, A. D. 1891.
(SEAL.) JOHN A. WEECHSLER,
Commissioner for Utah in the State of New York.

TERRITORY OF UTAH, }
Secretary's Office, } ss.

I, Edgar Snow, Secretary of the Territory of Utah, do hereby certify that the above and foregoing is a full, true and correct copy of the annual statement of the general condition of the Equitable Life Assurance Society of the United States, filed in my office on the 20th day of February, 1891, in compliance with the laws of said Territory, relating to Life Insurance Companies, approved March 7, 1885.

In witness whereof I have hereunto set my hand and affixed the great seal of the Territory of Utah, this 1st day of April, 1891.

(SEAL.) EDGAR SNOW,
Secretary of Utah Territory.

Scrofula
is more especially than any other a hereditary disease, and for this simple reason: Arising from impure and troublesome blood, the disease insinuates itself in the lymphatics, which are composed of white tissue; there is a period of faint life when the whole body consists of white tissue, and therefore the unborn child is especially susceptible to this scrofulous disease. But there is a potent remedy for scrofula, whether hereditary or acquired. It is Hood's Sarsaparilla, which expels every trace of the disease and gives to the blood the quality and sense of health. Get Hood's.
"When my boy was two years old he was attacked and suffered a long time with scrofula sores. The physician of length said he gave him Hood's Sarsaparilla, which we did. Two bottles cured him. He has not been sick and has not had any sign of scrofula since. We recommend Hood's Sarsaparilla to all our friends." MRS. E. C. COFFIN, 2 Eddy St., Cleveland, O.
Hood's Sarsaparilla
Sold by all druggists. Five for $5. Prepared only by C. I. HOOD & CO., Apothecaries, Lowell, Mass.

DR. R. C. WEST'S NERVE AND BRAIN TREATMENT, a guaranteed specific for Hysteria, Dizziness, Convulsions, Fits, Nervous Neuralgia, Headache, Nervous Prostration caused by the use of Alcohol or Tobacco, Wakefulness, Nervous Weakness, Sleeplessness, Mental Depression, Softening of the Brain, resulting in Insanity and leading to misery, decay and death, Premature Old Age, Barrenness (Impotency), Loss of Power in either sex, Each box contains one month's treatment. $1.00 a box, or six boxes for $5.00, sent by mail prepaid on receipt of price.
WE GUARANTEE SIX BOXES
To cure any case. With each order received for six box orders, accompanied with $5.00, we will send the purchaser our written guarantee to refund the money if the treatment does not effect a cure. Guarantees issued by JOHNSON, TRAFT & CO., Druggists, Sole Agents, 48 Main Street, Salt Lake City, Utah.

WHAT IS A GUARANTEE?

Many merchants and salesmen are in the habit of indiscriminately "guaranteeing" their wares with no thought of being called upon to make the "guarantee" good. It is a pernicious and foolish custom more respected in the honest than in the observance.

A guarantee, to have any value, should be made with knowledge of the meaning of the word and a set purpose to carry out the terms of the guarantee. On fine tools the makers instruct us to warrant, and we replace any tool found imperfect in use.

We have used our best judgment, acquired by a considerable experience, in selecting the following items for our stock and sell them to our customers with an absolute guarantee that if they do not prove to be all that we represent them, we will refund the purchase money in full.

"Jewel" Steel Range. A finished article, perfectly proportioned, made of the best material. Don't fail to see it. It will pay you.

"Quick Meal" No Generator, Evaporating. Light it as you do your gas burner. No smell. No danger. No complication. Every objection to the use of a Gasoline Stove done away with. Think of the discomfort caused in Summer by avoiding the heat of a big Kitchen Range.

"Superior" Cooks and Ranges. Superior as bakers. Superior in economy of fuel. Superior in design. Superior in construction. Superior in everything that goes to make a perfect cooking apparatus.

The "Foote Refrigerators." An Ice saver. A Health promoter. Cellular stone lined. What is that? Investigate it. It will more than repay you.

Our stock of Builders' Hardware, House Furnishings, Garden Hose, Lawn Sprinklers, Lawn Mowers, etc., is complete in every detail.
