NEWS OF THE MINES

The Holidays Interfere Somewhat With Development Work.

ACTIVITY RESUMED THIS MORNING.

Operations for the Past Week in the Tintic, Park City and Bingham Districts.

Advices from the mines were not at other today, as nearly all had been under a suspension of operations during the great Carnival and had just resumed work this morning.

Speaking of the Carnival, no man enjoys a few days' jollification better than does the miner. This is quite natural. His daily association shuts him from the outside world as it were, and consequently he is not accorded that degree of freedom that people in some other branches of occupation enjoy. Day after day, Sundays included, the miner toils, digs and picks in the bowels of the earth in quest of hidden treasure. Now and then his pick finds its way into a streak of ore carrying sometimes gold and sometimes silver. Then it is that his happiness is almost complete, for he feels within himself that the disclosure which his indispensable tool has made will bring joy to those in whose employ he is. This gives a satisfaction to the employe that urges him onward and he is led to go forth with doubled zeal and energy in the pursuit of his chosen business. This joy is a comfort to him, but his toil still goes on with no hope of abatement until a general holiday rolls round when he can rest from the monotony of his work. The miner therefore generally hails with delight the coming of a holiday, especially a holiday such as the Fourth of July generally is, for as it is a national day and is recognized by nearly everyone who has the least spark of patriotism burning in his breast, he knows that to show respect to the company is almost a foregone conclusion.

The influx of miners to a city causes the merchants thereof to wear on smiling countenances. They know the greater part of the money they spend is that of miners. He needs a suit of clothes, a pair of shoes, a new hat, and probably three or four pairs of overalls. His wife, if he is a man of family, is required to buy clothes for his companions and children and then too often he squanders the remainder of his accumulated cash in having a real, jolly good time.

Thousands of this class of men are employed in Utah's mineral kingdom, and a big majority of them spent the "Glorious Fourth" in Salt Lake, and returned to their posts of duty yesterday. They doubtless feel the effects of their jollification today and willingly do not be able to apply themselves very diligently until they have made up for lost sleep, but the results of their labors will be heard of before long, when reports of new strikes and encouraging development work begin to come in from the respective properties in which they are engaged.

THE TINTIC DISTRICT.

The Eureka Democrat's Account of Operations Thereabouts.

A survey has been ordered for the Eureka townsite, on application of the clerk of Juab county. An application for patent will be made for the townsite exclusive of the mining localities made prior to its entry.

The May Day was surveyed last Saturday by Surveyor V. P. Strange for a patent. The work goes steadily on at the tunnel with two shifts. The rock in the face is well mineralized and the hope is now expected to be encountered in a short time.

The white ordered some time ago for the Eva Mining company, near Diamond, has been put up and is now in good running order. The shaft is being sunk on what is known as the Bowers ledge. Well mineralized rock, carrying fair values of the precious metals, has been struck and everything presents a very favorable appearance.

The Eureka Hill mine and mill will start up on Monday morning. One shift will be put on to begin with, and as soon as everything is in good running order two shifts will be worked. About three hundred men will be on the pay roll when the mine and mill are running full force. This means a distribution of $22,000 each month in the camp from this company alone.

County Surveyor Jones, who recently made an underground survey of the Lower Mammoth mine, went back to Salt Lake Monday. The tunnel is now in 251 feet and it is expected the vein will be struck in a few feet more. Judge Bennett and Judge Burton recently purchased the three-eighths interest owned by Joseph Gruber and his partner and they are now sole owners.

L. C. Trout & Bro. of Salt Lake have been awarded the contract of supplying the Mammoth Mining company with a 200-horse power Heinich marine boiler and a 600-horse power Webster, Camp & Lane engine with which to equip their new hoisting plant. When completed it will be the finest plant in the west and capable of being entirely controlled by one man.

Prof. M. E. Jones recently purchased L. E. Riter's bond and lease on the Lawrence Sunbeam, and she his title to the Bonnie Sunbeam. This gives Mr. Jones the control of the group of five aggregations of the Sunbeam. A strong company has been formed in Kimberley and is seriously develop the property, $10,000 having already been put up to look the concerns. It is an assured fact that this property will soon be the list of producers inside many months.

The work of tearing down the Colorado Chief hoisting plant for removal to the Godiva has begun, the grading for the engine bed and works having been finished.

One of good grade is being taken out of the Shores camp, near the Rockeye, at the depth of 40 feet. Development work continues and a settlement will shortly be made.

The P. Gillespie, a mining and mill man of large experience well known throughout the western mining camps, who lately returned from British Columbia and is at present in Salt Lake City, will leave shortly for Silver Reef, the old silver mining camp in southern Utah, backed by several thousand dollars to reopen and work several of the old producers that have been idling idle, with the exception of a little work done by shippers, for some six or eight years. If the mines can be made to pay, Mr. Gillespie will demonstrate the fact.

From the Kingdom Bulletin.

The Provo mines, at the head of Carr fork and a property of Messrs Salisbury, is liable to come into prominence again before many weeks. A tunnel level was begun the first of April by a new outfit, which is expected to reach the ore shoot in another 100 feet, and judging from results obtained in the upper workings a rich result. The Provo people are a large one, and from the wonderful third level ore to the value of $125,000 was extracted, after which for some unaccountable cause, unless it was water, the parties then operating it became off and it was allowed to go to ruin. Even levels are now so badly caved and flooded that only a partial exploration of them can be made. An operator making from the fourth level, principally for silver, is following small streaks of grey copper, in which the vein abounds. E. W. Dewey of the present Provo company was here Sunday from Salt Lake and took away samples of the ore for assay, from which he has received returns of 41 ounces of silver, $3 gold and 15 per cent lead. This result adds much to the feeling of confidence that the Provo will soon be a good paying proposition. A force of eight men is at present employed.

A resuming of the old Dumpling lode, situated northeast of the Winnemuck on East Mountain and being operated by Roy Beach and F. A. Virtue, has just made one of the best strikes of the season. After crosscutting nearly 300 feet the vein was encountered, and a study of reports of lead covering the face of a drift and running high is reported as the present showing.

A rumor was in circulation this week that the Old Telegraph mine had been sold for an immense sum to a foreign syndicate; but Manager Lavagnino, who came in from Salt Lake Tuesday morning, did not seem to be posted, and rather put a quietus on the matter by stating that he would be doing business after the fish at the old stand. Those most intimate with the workings of the Old Telegraph assert that it is still the big mine of Utah, and it would be a great thing for Bingham if the company should continue to turn men and work in for extensive production.

On Wednesday an unexpected kick from streak of galena was discovered in the front vein of the Mary, of the Old Bullionite company's group of mines. It is considered a good find, and may lead to important results.

Plans are said to be on foot for the rebuilding of the Yosemite mill, recently destroyed by fire. At the time of its destruction the Yosemite company were just beginning to realize a handsome return from the mine and mill.

Work is about to begin on the Lone Tree, a prospect paralleling and adjoining the Dalton mine on the east. It is the property of Messrs Stephens, Quillan and Cleary, and in doing assessments gave up some high-grade mineral.

Ore is now being taken from the new strike in the Ruby-Native running from 11 to 20 per cent copper, and the indications are that there will be plenty of it. The vein is showing two to three feet of mineral, and the owners are much elated.

The Winnemuck will next week ship 150 sacks of ore which assays $500 to $800 per ton, ruby silver, taken from the small pipe discovered several weeks ago in the footwall, near the 200 level. The streak has widened steadily in the past few days, and is receiving careful attention.

IN PARK CITY

What the Record says of Mining Operations in that District.

According to promise the Record's mining reporter this week visited the Dahlgren-Urian strike in what is called Colorado canyon, and had the pleasure of examining one of the most promising looking prospects it has been his good fortune to see for several years. The ore is something new for this section, the usual run of it being largely composed of copper, thus making it more desirable and of greater market value. Messrs. Dahlgren, Urian, Olsen, Johnson and Hendrickson own two groups of claims, twenty-one in number, covering the territory at the head of Red Pine canyon, one foot of Bald mountain and a portion of the range south towards Dutch canyon. The vein they have uncovered is a contact between lime and porphyry, and the ore carries gold, silver and copper—the first-mentioned even at the present slight depth showing an average of over $20 in the native metals, while the second class, of which there is in sight nearly a 3-foot breast, stores 15 ounces silver, $3 in gold and 9 per cent copper. At the outcrop of the vein, about 300 feet above the present works, and just below the lime, the boys run a 75-foot winze on the ledge, much good ore being exposed. A tunnel was then started some 300 feet further down the hill to tap the vein at greater depth; and after driving 120 feet the vein was reached, being fully 20 feet wide where encountered, but apparently split into two sections a-6 having as yet no real defined course or dip. After developing both branches of the vein for some feet, the boys cut out a large station and are now sinking a winze to get more depth and establish the strike and dip of the vein, and as soon as that is proven up a long tunnel will be run from the gulch below to tap the vein at a depth of about 250 feet and afford an easy outlet for the product.

There is a strip of country lying between Ontario No. 5 shaft and Dutch canyon, belonging to Bald mountain, that, in the estimation of many of the Park's oldest and best posted miners—men who have made a study of the camp's ore bodies and its formation—has the making of several mines just as big and rich as any in Ontario. This ground is all owned by men who have not the means at hand to develop their Bald mountain holdings as they well know they should be developed, hence are forced to plod along year after year doing the best they can with their limited time and means. The developments made in the Valdis group by Moses, Dahlgren, Urian and others serve to show that this strip of country contains wonderful ore and that all that is needed to make it rank and prosperous is the magic touch of wealth. A neighbor before that should be an independent to realize that the claims included along this belt of country have extraordinary prospects, many of them indicating as high as twenty odd ounces in silver and a good percentage of copper. It is certain that there is no reason that more not greater and more extensive improvements for the investment of capital than the strip of country above mentioned, and the day is not far distant when this section will be proven to the satisfaction of the world. Now is the time to get a foothold and go up with the great mountain that old Bald and adjacent territory will yet add to the honest money of the world, through a steady stream of silver, gold, copper and lead.

Work on the Park mill is being pushed right along and a large portion of the frame is up while a big force of workmen are rapidly putting the white structure in shape. The Union Pacific has got its siding running to the mill and will under way and will soon have it completed. Lumber and other supplies needed in the structure arrives daily, some twenty cars of lumber having already been unloaded on the ground while one or more cars arrive each day. The machinery, as the writer is informed, will arrive by the time the foundations are ready to receive it. The Record has already had the privilege of once saying "we told you so," and from what we learned yesterday will soon be able to repeat the saying in connection with the new lumber plant. The size of the structure is exciting much comment and the critics are just beginning to realize the size of the enterprise and what it means for Park City, though the real benefits have not yet begun to materialize. Mr. Jones expects to begin the reduction of ores early in September, and is already investigating the resources of the camp as regards the class of ore required, while several prospectors are preparing to begin active operations in the near future.

The Daly West closed down Wednesday morning, the entire underground force being laid off. Active operations were at once commenced in laying the foundations for the new hoisting engine, and the work will be pushed as rapidly as possible in order that it may be completed by the time the machinery arrives, which is expected shortly after the 15th of the month.

The last lot of shipping ore sent out by the Ontario company returned a wonderfully fine average, going over $100 per ton, and Foreman Connelly says the old Ontario is still the biggest mine not only in the Park but in the West. This shipment proves that as the mine goes in the deep its ores are just as plentiful and richer than at the surface.

The first consignment of machinery for the Mammoth's new hoisting works arrived Saturday afternoon last and it is now nearly all in the Union Pacific freight yards and will be taken to the mine early next week by James Pollock & Co. The machinery was built at Zanesville, Ohio, and when in place the Morgan will have one of the best equipped plants in the camp, and its new shaft will be sunk down as rapidly as possible.

Following are the ore shipments from the Mollntosh sampler for the present week: Silver King, 800,000; Silver King concentrates, 220,170; Daly West concentrates, 261,000; Creek jig gings, 81,300. Total, 1,362,570.

Dips and Spurs.

The Utah Commercial and Savings bank paid its 2 per cent quarterly dividend today.

The Deseret Savings bank of this city and the First National bank of Ogden paid dividends of 2 and 3 per cent respectively, today.

Bingham's ore shipments for the month ending June 30 amounted to 6,018 tons, while for the six months of the present year they aggregated 37,[illegible] tons.

It is intimated that the copper plant will be the near future be put in operation, although nothing authentic is given out by those in a position to know.

The Park Record came out on the Fourth with patriotism oozing from every page. It was printed in red and blue ink with the white paper as a background making up the national colors. The Record is an enterprising, newsy sheet.

From Scandinavia.

Elder Peter Sundwall of Fairview, Sanpete county, Utah, reached this city at 3:30 a. m. yesterday on his return from a mission to Scandinavia. He left Utah in March, 1894, and went direct to the Copenhagen office, where he assumed the duties of president of the Scandinavian mission. The work of the Gospel in that part of the world has spread and increased steadily during the last two years, and at present it is in a very flourishing and satisfactory condition. During the last six months the number of baptisms has been 40 per cent greater than for the same period last year, or the year before. Openings for preaching are specially numerous and favorable in Norway and Sweden, and the prospects in Christiania and Stockholm conferences are specially favorable. Elder Sundwall returns in excellent health.

Elder Heber C. Christensen of Richfield, Sevier county, accompanied Elder Sundwall on the journey to Scandinavia, and also on the return journey home. He labored in Tromsoe, in the extreme northern part of Norway, the first eighteen months of his mission, and in Aalborg, Denmark, during the remainder. Tromsoe is within the arctic circle where they have sixty-three days without the sun, and sixty-three days of continuous shine, each year. The Aalborg conference has yielded many thousands of converts to the truth in the dispensation and the work is in a very encouraging condition there now. Tromsoe is a new field but the Elders laboring there are well received generally. There is a branch of nine members there. These two Elders will leave this city for home today or tomorrow.

These also arrived with these Elders the following returning missionaries: Elders John C. Wilcox, Anthon Petersen, who have been laboring in Scandinavia, and the following, who have been laboring in Great Britain: Alvin L. Beach, Orson M. Allen, Talbot of this city, Wesley L. Wood of Ogden, and James W. Sandford, Mill Creek.

There were also thirty-nine emigrating Saints with the company.

LITERARY NOTES.

The most thorough and authentic story of William McKinley's career and career that has yet appeared in periodical literature is contained in the July Review of Reviews by Mr. E. V. Smalley, the well known journalist, who has intimate knowledge of Republican party politics and has acquaintance with the public men. Ohio render him peculiarly competent for such a task. Mr. Smalley writes from Washington and from the "Mecca Reserve," only forty miles from McKinley's Poland home, and he writes with full personal knowledge of the subject, fully entertained. The article is well illustrated.

The Declaration of Independence in the Light of Modern Criticism, by Moses Coit Tyler, professor of History in Cornell University, presents a well considered timeliness as the opening article in the North American Review for July. Professor Tyler discusses the Venezuela and Nicaragua statements of Richard Olney from many standpoints, but always in a legal and patriotic spirit.

Table Talk for July is full of useful and helpful suggestions for the home. Its seasonable recipes and menus are of great value to the housekeeper, while many topics of interest to the home maker are treated upon. Outline of the regular departments of the article on Household Remedies, Vacationing, A Spring Blossom Tea, The Modern Christening, The Office Closets of the Useless, Summer Days at the Lakeside, and The Wearing of Name of Wives.

John Trescher, janitor of the Fourth ward school, at Virginia, Nev., dropped dead in the hall of the building Monday morning while conversing with one of the teachers. Heart disease caused his death. He was a Mexican war veteran and served in the civil war.
