DESERET EVENING NEWS.
Monday, April 30, 1894.

THE COUNTY TEACHERS.

The Pedagogues Gather and Listen to a Discussion of School Subjects.

Miss Rothenhouse Speaks on Elementary Geography and Drawing and Prof. Whiting on Botany.

The County Teachers' association convened on Saturday, April 28, in the University building, in this city, but owing to the press of matter on our columns the report of the meeting was crowded out of the issue of the NEWS of that day. The subjects under consideration were a continuation of the discussion of "The application of theory of concentration to elementary geography and drawing," by Miss Amelia E. Rothenhouse, and also "Methods of Teaching Botany," by Prof. C. A. Whiting.

Miss Rothenhouse spoke as follows: In our consideration of the principles that are the basis of a right system of education, we saw that from the natural unification or concentration that induces (1) in educative mental action, (2) in the relations between the subjects to be taught, (3) between thought and the expression of thought, a beautiful order or system may be delivered and held in mind as the guide to all methods and all details of schoolroom work. By this system we work to be done as an end in itself. Nothing is to be taught for the sake of the knowledge of that subject. No training is done for the sake of skill in that particular form, but all is done for the development of the whole being of the child.

Of the subjects mentioned by this view, geography may be considered as central in its relation to the others. We, therefore, choose geography to illustrate somewhat fully the theory of concentration and from the various modes of expression, we select drawing for the same purpose. The fact must be emphasized that geography cannot be rightly taught apart from all the other sciences and that drawing as a mode of expression cannot be separated from the whole circle of subjects presented for study. Our attention will be especially directed, however, to the two subjects named. The study of geography must begin by actual observations of natural features. No continent, no considerable portion even of a continent, can be studied from observation. It must be conceived of by imagination, and this is possible only on a basis of concepts gained through observation. The course which should precede the study of continents may be closed as elementary geography, a study of the various forms of land and water. This course of geography proper may begin with the third grade, though the teacher of the lowest grades should have in mind a geographical line of story, as the location of objects in the school room, the school yard, directions and distance to their homes, with maps and observations of various phenomena.

Any teacher in the county or within reach of society of the forces employed in the evolution, and the teacher is the only one to teach in the same direction, which some different forces may be exerted as winters, horses, rainfall, etc. The children must be taken out of doors to the river bank, perhaps an afternoon at most. Build it in the most simple manner at first. Compare the sides, giving the same steps, moved from the base to the top, smooth, uniform heights, separate material, form of particles, water largest, compare with lake gulches, side effects of this work, of stream, plants, what kind of will each grow upon. The questions should be such that the children can bring out the answers. Rather than to ask leading questions for another hour to get the answer. Have always in mind the use of such past observes. The children have been shown to follow every step by one to start something to progress what they have noticed. Now the new world given—sentiment, love, adore, etc., may be written on a board and the pupils required to write them. Next may follow a writing lesson telling what they have learned.

The third study was of problems in measure, comparing length of square height with some known height. Express the facts learned in drawing such cells as boxes, and on paper. In all the expression used with each lesson the interest should be in the thought upon the writing or drawing may be secondary and yet will gradually grow with regularity and beauty. The aim should be to make expression unconscious and automatic, that thought may be the center object.

The next lesson may be upon two ridges of land. Call the top the ridge of the ships, where two opposite slopes meet the lower edges, here will be a valley, here a stream—study waterfalls, mountain lakes, lower filling up, streams taking strength, forces, earthquakes, etc. Remember that each of these lessons is accompanied by lessons in other sciences, one by observation and by experiments in physics. Each lesson is followed by drawing, modeling, writing, reading and this are furnished sufficient opportunity for reading these forces, giving much time for the science work now coming to be demanded even in the primary grades.

The end in view must be such thorough knowledge of the forces studied, adapted of course to the child's capacity, that the mind may feel the of structure at once seems so near a concept in the mind as would the same of the yet without. If the study is made interesting all other necessary work be given such as pronunciation, pronouns, vocabulary long word is no difficulty when the pupil is led to come to it.

By reading of travels, by description of places near home by the teacher, the imagination is exercised, and the end of the elementary course is a preparation to study the continents.

The following is a synopsis of Prof. Whiting's remarks on botany, the results were telling "trees and leaves." Roots should always grow downward, they are not only the mouths of plants but they act as foundations to keep the plant in place. They have various kinds of nerves. Their only appendages are branches and not leaves. The roots of plants are about as widespread as their counterpart, and the location of objects in the school room, the school yard, directions and distances of their means of labors in the seasons. Mistakes will be better done if detective from the correctness of the work. The work is a process that is by individual issue of people in the Gospel. When nurses shall utilize, as they will, when experiments shall be designated by Deseret, when little shall the spelling shall and scientify shall always grow and scientify and good order road prevail in Zion.

The first and great commandment is love God. But do you suppose you can love him by a commandment? Can a man expect his wife to love him by commanding her to love him? Usually women love because they ought! Only commandment is loving. Men love because they ought! Only commandment is loving. Men love her material means of his employ, time, affection, and those principles which make an enjoyment and to observe those principles in him. Men are in become organized with the one. So it is with us and our Maker. We are only love God by keeping organized with him and by knowing his attributes. When we come a man that comes from the Lord Jesus Christ and is loving, obedient, and those who are sanctified by obedient Holy and Christ, ingenuity, honor, not be Devil. In all the duties of the Holy Ghost have been shown of the character of Jesus Christ. The Jesus who was so full of the Gospel is so come they do not know it. But it is meant to have man keep the Sabbath great commandment very must be for to a knowledge of God. So to commander with the Gospel is to make men and women acquainted with God so that they may they may learn to love and obey it.

The choir and congregation sang:

"Do the duty God has given to you, Be a faithful, true, and loyal to God."

The benediction was pronounced by Count C. W. Parsons.

Republicans—Fourth Precinct

Attend the "Blaine" Club monthly meeting next Tuesday, at 8 p. m. at Taggart's hall, corner First and G streets.

Seventh Ward Democrats.

A special meeting of the Seventh Ward Democratic Club is called for Tuesday evening, at 7:30 o'clock. The place of meeting will be Thomas's hall, 16 Dividend avenue, east of 440 south, West Washington.

Gentlemen:—You made a suit of clothes for me five years ago. The cloth in that suit I had to last for two years. I wore it so long it became out of style. It was and is good condition. I now present and my goods to wear I. Yours Respectfully, JOHN MOORE.

Your truly,
W. D. OWEN,
Traveler for Z. C. M. I.

He's out, clean and tasty, all for the, at the old, reliable, test old, efficient tailor and hair dresser in Country. Cutler Fuller, Walker House, 244 Main.

GOOD ADVICE
Fire Insurance in Hard Times.
Having groups of companies, the property-holders should insure where the risk is good. Insure in Home Companies, which are represented in Utah, and which have been doing business with us for years, and have paid losses promptly. Insure in the
