DESERET GOLD AND SILVER MINING COMPANY,

Salt Lake City, Utah, May 31, 1892.

"LET UTAH PEOPLE OWN UTAH MINES!"

DIRECTORS: Joseph F. Smith, Elias Morris, J. Moses Stevens, J. C. Wilson, Edwin Beaumont, Frank M. Wells, A. O. Duncan, C. H. Wilson, J. J. Lyon.

I am instructed to sell sufficient of the working capital of this company to erect on their ore ground a plant for the reduction of their ores from the BRANCH and MARY MINES. These two claims show a large body of ore estimated at One Hundred Thousand Tons, the average of which, as evidenced by six exploration openings without sorting, gives 60 oz. silver and $3.00 gold. They have a 6 foot of tunnel and shaft.

These mines are in Marysvale, Piute County, 30 miles from railroad and 250 miles from the market, but for the difficulty they would now pay dividends. The treatment of the ore at the mines will, by saving transportation, put the property on a good paying basis. Mr. H. C. Chandler and associates are now working profitably a mine but a few rods distant with the same quality and kind of ore.

It is the intent to work up 20 to 30 tons a day, and it is confidently believed that this improvement will make the stock worth $1 within a year. The first block of 20,000 shares is offered at 25 cents per share.

ARTHUR STAYNER, Agent, Hooper Building, Salt Lake City.
Promoter of Industrial Enterprises.

OFFICERS: Joseph F. Smith, President; Elias Morris, Vice President; A. M. Musser, Secretary; A. O. Duncan, Treasurer; H. G. Tate, Gen'l Mining Agt.

SHEEP PORTRAITS.

Varieties of Sheep Differ as Widely as Races of Men.

Here are two pictures of heads of sheep which are strikingly different.

The first illustration shows a Shropshire ram that took first prize at the Royal society exhibition of 1891. The Shropshire finds great favor in the west.

ENGLISH PRIZE SHROPSHIRE.

are the dairies at present because of its hardiness. In Canada it is also popular. The Shropshire's best point is probably that it yields a large quantity of good mutton. But its woolly mantle covers everything up as well. The average weight of a fleece of the improved Shropshire is seven pounds of long, not overfine wool, which pays very well.

In the second picture is a unique animal of the sheep family.

It is an illustration of a black faced mountain ram of a breed akin to the black faced Scotch sheep, the oldest breed in Scotland. The Scotch sheep

BLACK FACED MOUNTAIN RAM.

are the oldest breed known today in the world, the most unchanged and enduring. The ewes, by all accounts, do not apply to them. Their mutton is of choice flavor, and they are like goats of Mexico almost proof to the Texas ticks. The fleece weighs very long in length and rather coarse in texture.

Breeding from Crippled Horses.

In answer to a question from The Rural New Yorker on this subject J. S. Woodward writes from Southfield, Mass.:

In my fastening experiments in this state I find it quite difficult to get stock stuff horses as I need. We imported from Canada and sent directly to the Southern Rhode Island breed of trade horses, Dutch and Clydes. They had been bred in Canada and were full, intemperate and worse-stifled blooded stock. All purchased and brought here were in good condition as we with full fill Canada and had from $75 to $100 paid there. We put them in the woods at work at the heavy business of logging.

When we have used them two or three years, if they become injured so as to be lame, we send them to our farm and put them on grass until they are in perfect health, although not sufficiently strong for the heavy work in the woods. They are then put back into the stables and shoot the lame for fifty days, and second time months before finding that when they are again turned loose allowed to run upon their deep dark fields. They require no treatment except a cut at the green and a little sulphur powder as a tonic.

We have found that it is almost impossible to get acquainted with the horses to feel. It is rare to be injured in the legs or if we find fresh wounds or other injuries that prevent, far from doing hard work, she may be in just as good a shape to breed as though she did not have these wounds or injuries. It is our experience that one stallion sires on the side from perfectly sound and strongly bred stallions from the Shire or Clyde breeds any blemishes like sidebones, spavins or other troubles that ever happened. We have never had any satisfactory cure from the above-mentioned treatment of the breeding question. One is perfectly safe in breeding mares to perfectly sound stallions with properly shaped feet and leg bones. Of course the mares must not have blemishes from such causes as ringbone, sidebone, spavins or other like troubles and we would never advise breeding a mare that has the latter.

She Can Farm.

Connecticut farmers, who continually bemoan that the old state is used up for farming, may learn something to their advantage by consulting pretty Miss Bertha E. Wood, who makes money tilling a rough little farm in the town of North Canton. Miss Wood experimentes all the operations on her place, is up with the sun every day, raises stock, sells milk and butter and has a big barn full of some of the best tools in the state. What is still more wonderful, she has learned how to make money in the risky business of raising spring chickens for market. She makes a small fortune yearly selling eggs. Some of them are extraordinarily large. She presented a couple of them to the editor of the Hartford Courant the week. They weighed half a pound apiece, and are the largest hens' eggs reported in the state this season.—New York Sun.

Cigarettes.

If there were some small shed, bar and lattered cigarettes sold to the market people would buy them. Not every one stops to buy a half of tea or twelve pounds weight. And it is said that the few cigars that are raised in New Kent land are usually smaller than the Philadelphia cigars, being more fragrant, made from the smaller leaves. Also they are expensive, it costs no more to grow or fatten than any other plant, but the sell at twice per piece, because the market is not well supplied with them.—American Cultivator.

Bottle is the one great city that has solved the problem of utilizing sewage. The sewage is spread upon extensive farms belonging to the city. The sewage is distributed to the land by means of underground cast iron pipes. A system of irrigation has been adopted that is perfect, at the same time the economical substances which the land must waste are fed to it. The demand for the sewage fertilizer has become setting private farms. Tramps and vagrants are made to do the work on the municipal sewage farms.

If you want to help humanity and leave something to show that you deserved to live, look about and see what you can lend to be your circumstances in the line of aid, not charity. Charity is no help. The lord is with before you, decide and the one or two have shown which you can work to some purpose, and stick to them. Follow them as long as you live, and do not let yourself be drawn away. Do what you have an undertaking commencing if good to the rest, and not either your power away on a dozen different directions. Concentrate in some, play and lose nothing.

Worship were nothing, unconverted and unless temperate and regular habits are most valuable rule to successful life and happy. Do not, says the London Lancet. The Lancet instances as an illustration of this a young Highlander, Hugh Macleod, who lived to the age of 105. He has always lived in active outdoor life, working regularly, but not excessively. He confesses who working for his relatives till age. He remains chiefly on fish and oatmeal porridge, with occasionally a little cake. He food has always been very simple. Gladstone also has learned that simple food, and not too much of it, is the thing.

Mysterious Nickel Mines.

Some time ago a mining prospector sent to the United States geological survey some specimens of nickel ore that he had found in Oregon, but where does not appear. The pieces of ore seem like half rounded pebbles washed down and ground together by the action of water. They had the appearance of being a kind of nickel ore, and the specimens were found to be of very considerable value. But it was found that they were scattered in great quantities over the bed where the prospector had discovered them. More specimens were found and found to be 40 per cent. pure nickel, the rest being iron, enough to pay cost, at many places.

Afterward a government mining engineer visited the bed where the specimens had been taken. Nickel is found to exist rather in the Lake Brown and Superior region, also in several localities in Pennsylvania, in Cornwall, England, and in Spain. There are the main sources whence the world's supply is drawn. The impression conveyed to the geologists who canvassed the nickel field in Oregon was that the pebbles lots of ore had been broken off from some great mass or vein of nickel rock and washed down by torrents and over out into the bed in which the prospector found them. But where is this mass of nickel bearing ore? That is the quest of some future prospector.

Polonia.

The word has a better sound than much, but much it is that is the foundation of it. The American in Europe has observed that he Dolly must bothered dishes are made from canned in a way that is quite new to him. The canned is boiled. Generally, just as we make meat, but after it is boiled it is seasoned with tomatoes, chopped onions fried in oil, a pinch of cinnamon, etc., all the taste of it is a revelation of the possibilities of canned.

Here is one way in which the Italian chef prepares a dish of macaroni.

Make a few of olives and onions and to it tomatoes or preserved tomatoes, that is much water to dry and necessary, and when for your it is ready to serve. Continue boil it until it boils and very deep in canned, let the dish and cook in oil. Take the pan out of it with a wire, so that it does not burn, keep. For a quart of water a quarter of a pound of beef with salt. Add to the tomatoes the pulp is cooked, and it is red wine with canned tomatoes.

Some of the Italian cooks put equal parts of macaroni and wheat flour into the polenta, smoothing it in the highly spiced very dear to the son of Italy. Perhaps, however, one of the best methods of preparing a grand dish out of the humble macaroni is that into which a good boiling onions. Here is such a dish:

Fill two ounces of either meat or ham in three quarts of cold water in a little stock of salt. Then the onions in half cooked, season it from the fire, and add six ounces of meat well boiled, with a piece of pickled sliced onion. Add twelve ounces of macaroni and half an ounce of mustard cracked. Work the mass into a paste, put it into a buttered dish and bake in a hot oven, and it is in the table hot before a golden crust, and it is on the table.

Pass the polenta.

The Crowded Type.

Dorothy, the goddess of reason and children, who is known to have killed two of his wives and four of his own children, is claimed by phrenologists to belong to the distinctly crowded type. He was born enough when it was a question of assignment to be born, but he was born. Like a wise he was not wanted and think for a long time, but when it came all was born to go. It will be interesting to know the final result of the energy of his brother whether it was distinct from other men.

Children are divided by the phrenologists into three classes—the born criminal, the crowded type and the normal type. The born criminal has a receding forehead, a large jaw and head narrower than behind, and a face and head which always has some or two in shape and sign of criminality. If normal early learned people are will be criminals. These types have been established. Then the doctors, apparently having nothing else to do, have discovered another group, the "crowded type." Phrenologists say that "the commission with the foundation of crowded." and the "crowded" portion. Phrenologists say that the face has a crowded look and appearance, being more compact than the normal type. Dorothy, though it was a kind of double head, seemed to be shaped short off.

What Implied Has Done For Farmers.

The German Union says:

[illegible]

Truth is a good thing, but it can be used to excess, says Bill Nye.

In 4,000,000 years we shall see the eight tailed comet again, provided we are about here at that time.

When a young man and woman coming the tribes on the Orinoco wish to marry, all they have to do is to set up housekeeping together. An aerial bed of bother is saved here.

Of articles which Guatemala will admit free of duty from the United States under the reciprocity act the principal are railroad and electric lighting machinery and materials, livestock of all kinds, corn, agricultural machinery and wire fencing.

Mastiff Plug Cut, always mellow, cool, sweet and full of that rich comforting flavor, only obtainable from the highest grades of Virginia leaf tobacco.

"German Syrup"

J. C. Davis, Rector of St. James' Episcopal Church, Eufaula, Ala.: "My son has been badly afflicted with a fearful and throbbing cough for several months, and after trying several prescriptions from physicians which failed to relieve him, he has been perfectly restored by the use of two bottles of Boschee's German Syrup. I can recommend it without hesitation."—Clergymen, deep-seated coughs like this are as severe as a bereavement, and are to be neglected. It is for these long standing cases that Boschee's German Syrup is made a specialty. Many others afflicted in this fashion will do well to take a note of this.

J. F. Arnold, Montevideo, Minn., writes: I always use German Syrup for a Cold on the Lungs. I have never found an equal to it—for has a superior.

G. G. GREEN, Sole Mfr'r, Woodbury, N.J.

"CLUB MEN" Say THERE IS NOTHING TO Compare With A Pipe of Mastiff — PLUG CUT.

Packed in Patent Cloth Pouches and in Foil.

HIGHLAND Evaporated Cream.

PURE, UNSWEETENED.

FOR TABLE USE, COOKING AND AT FAMT FOUNTAIN.

For Sale by Grocers and Druggists.

Southern White Lead Works

ST. LOUIS.

Manufacturers of

STRICTLY PURE WHITE LEAD

RED LEAD. LITHARGE.

SOUTHERN COMPANY WHITE LEAD ST. LOUIS & CHICAGO

THE SOUTHERN WHITE LEAD is manufactured entirely from the best refined Pig Lead and is ground in Pure Linseed Oil, and as the company manufacture only STRICTLY PURE, parties buying White Lead bearing "Southern Company" are absolutely sure of obtaining a PERFECTLY PURE ARTICLE.

For Sale by All Dealers in White Lead.

UNDERTAKERS.

ESTABLISHED 1853.

Joseph E. Taylor,

Pioneer Undertaker of Utah.

Manufacturer and Dealer in all Kinds of Metallic and Wood Caskets.

COFFINS AND CASKETS.

Full Line of Cloths Trimmings Always constantly on hand.

Telephone and Telegraph Orders promptly filled. Entire generosity in their Funeral Furnishing, without extra charge.

OPEN DAY AND NIGHT.

Factory and Warerooms: No. 153 E. First South, Nearest door to Tabernacle.

TELEPHONE No. 76.
