BUSINESS AND MINES

Feeling that the Financial Situation is Better, if Anything.

MILL EMPLOYES' ARRANGEMENT.

Pacific Bank Depositors.—Land Office Items.—Rising and Miscellaneous Items.

Much stronger hopes are expressed today than were given voice to a week since for an improvement in the financial situation. The change in the current is believed to be close at hand, at least to sufficient positivity to enable most of those who fell victims at the beginning of last week to tide over and get squarely on their feet. A leading banker remarked today, "Things are getting brighter, or at least we are getting in better shape to deal with them. Where a short time ago there was an inclination to crowd debtors in an eager move for self protection, creditors have come to the conclusion that the wisest policy is to mingle business with a good deal of patience, especially where parties show an inclination and ability to settle within reasonable time. The credit system is on one way being driven to the wall. The former custom of giving credit to everybody is no longer indulged in by any great extent, while reliable customers are allowed to make purchases on a more extended time, with a specific understanding that care is to be exercised in collecting payments. Generally speaking the situation is improving, the feeling easier for this being that the people have made up their minds to retrench in unnecessary expenses and to face the issue of hard times squarely even before it is on us."

ARGYLE ARRANGEMENT.

The Provo Woolen Mills management and employes have reached an agreement by which the mills will go on, and the contract with the California people, which was to a considerable dependent on this arrangement, was today finally closed. On motion of Mr. Cannon, at Provo, the case was plainly put before the employes, to whom two propositions were made. One was to wait for a portion of their wages until such time as the mills could realize cash from the sale of their goods, the rest to receive two-thirds of their pay as they went along. The latter was to take all of their pay together, one-half in cloth and one-half in groceries at market rates. The employes held a consultation, and came to the conclusion that the last named proposition was the most suitable to their circumstances. The mills, therefore, started today on a three months' continuous run.

LOST WITH THE PACIFIC BANK.

A full list of the depositors with the recently collapsed Pacific Bank of San Francisco, with the amount of cash which the bank was owing at the time it was closed as a result of reckless mismanagement, has been published in the San Francisco papers. In the list appear two Salt Lake banking houses, R. H. Schettler, who had $787.29 deposited with the Pacific, and the Utah Commercial and Savings bank, the amount of whose deposit is given as $2,013.74.

LOCAL LAND OFFICE.

Charles Mayberry of Bingham has filed an amended application for the letter here in the West Mountain mining district, near the Amelia lode.

Henry L. Thomas of Coalville has made application for patent on a coal claim, comprising the south half of the southeast quarter and the northeast quarter of the southeast quarter and the southwest quarter of the southeast quarter of section 16, township 2 south, range 8 east.

Joseph Motior of Sanpete county has filed a homestead application covering the west half of the southeast quarter of section 34 and southwest quarter of the southeast quarter and southeast quarter of the southwest quarter of section 27, township 17 south, range 1 west.

Thomas P. Tidwell of Nephi has filed a homestead application covering the west half of the southwest quarter of section 29, township 12 south, range 1 east.

Nora C. Eskheen of Salem, Utah county, has filed a homestead application covering the northeast quarter of the northeast quarter of section 24, township 6 south, range 2 east, and lot 4, section 18, township 6 south, range 3 east.

PARK "BEYOND" ITEMS.

Two or three prospecting parties have left town this week to follow up the McGuire outfit which left some weeks since to locate the rich gold find that was brought in at that time. The case of the delinquent stock of the West End mining company took place at the office of the secretary, Dr. Allen, Thursday. There were a number of brokers present and the stock of 40 readily sold at twenty cents a share, 20,000 shares of the stock.

Wednesday of this week the Ontario company put a force of men at work on No. 2 shaft drifting to connect with the main tunnel, and the work will be pushed right along from now on until the force meet, unless some unforeseen difficulty intervenes. In the drift from the shaft to the main tunnel the work is being done from that direction.

The work on the new reducing plant for the Ontario company is going forward rapidly. The frame of the main building is all up and that of the balance of the frame-work is almost completed and being put in position as expeditiously as possible. It is thought to make a fine addition to the upper mining town and will be an immense benefit.

Wm. McDonald, who is operating on some claims in the mountains south of Morgan city, on the U. P. Extension, has some fine samples of ore from his property. It carries about 18 ounces silver, from 20 to 30 per cent copper and a showing of gold. There are a number of fine prospects in that vicinity and they will no doubt attract considerable attention as soon as their merits are brought before the general public.

THE HIGH SILVER.

The High Silver mine, while it is far below being worked up to full tonnage, is still carrying on a fair amount of business, and is making regular shipments. There are about eighty men regularly employed at the mine.

BINGHAM "BULLETS" SCORE.

The Zelnora is working again and the operators have struck a fine seam of rich ore. This property is located at the head of Carr Fork proper, just above the Prince and near the Julia B.

The ore bodies on the No. Ten and Chicago properties, which are being operated by A. L. Heaston, M. Kuppenheimer and partners, are improving both in extent and quality with each day's work.

Harry Cameron and partners are driving the tunnel forward on the Aspen lode, at the head of Collins Wood gulch, with the expectation of soon encountering the rich ore body known to exist on that ground.

The tunnel on the Julia B. is now in 350 feet and is cutting through streaks of galena ore which carries 50 per cent lead and 250 ounces silver. The owners expect to have a permanent body of this ore when they reach a cross lodge.

You can now see here and there all up and down the main canyon, men sinking new shafts for retrack and cleaning out many of the old shafts that have been abandoned for years. It is a well known fact that Bingham gulch is rich in gold, and those who are going after it with vim and determination as we know to be hard-working miners.

SILVER AND SO ON.

Operations in the Utah Consolidated at Virginia City, Nevada, were suspended on Saturday. Explorations at that mine have been in progress for the past twenty years, and during that time assessments have been levied on the property aggregating $400,000. Latterly only two men have been employed to undertake work. The failure of the shareholders to pay the last assessment is the cause of the shutdown. Experienced miners have always contended that the Utah is not on the Comstock lode, which, they assert, swings sharply to the eastward some distance south of the southern boundary of that mine, and the failure to find ore in paying quantities after thoroughly exploring the ground about the water level indicates that their opinion is correct.

NOTES.

The election of a recorder for the Uintah mining district, at Park City, takes place today.

Forty-three bars of bullion were shipped from the Ontario at Park City yesterday. They contained 28,372.8 fine ounces of silver.

Valuable deposits of oxide of aluminum have been discovered fourteen miles south of Lorenzo, Wyoming. The deposits are claimed to be sixty per cent pure.

Lead Farmer: A number of miners are located on the creek in the north fork of the West canyon and are panning out gold. They intend putting in sluices.

Insurance companies are withdrawing business from parts of Colorado, claiming that for the past three years nearly every company has operated at a loss.

The Bingham *Bulletin* has been compelled by the hard times to come out as a two-page paper. Even at that size, it announces, and with no more patronage than it receives now, it is going to be a hard scratch to pay expenses.

SALT LAKE CLEARING HOUSE.

Today's clearing house exchanges amounted to $98,734.

TODAY'S QUOTATIONS.

New York—Silver, 72½c, bar, $1.30. London—Silver, 35½.

ORE AND BULLION.

Wells Fargo & Co. received today: Mingo bullion, $700.

T. R. Jones & Co. received today: Dane bullion, $200.

McCornick & Co. received today: Hammer bullion, $400.

W. A. Hooper had in today for assay, 56 tons of Utah ore, 300 tons of Bullion-Beck ore, and six other contacts.

LOGAN.

LOGAN, UTAH, AUG. 13, 1893.

A Glee Club's Pleasant Jaunt.

The Sage Brush Glee club returned from their trip to Bear Lake, fairly elongated with the hospitality of the people of there. The concert to which they went to participate, going up for the purpose of helping to pay for the organ recently purchased for the Stake Tabernacle, was a great success, over $100 being added to the fund. The singing of the club, under the leadership of Prof. Engelberg, was highly appreciated by the audience. An encore was treated on after each number. The boys were taken to Fish River on Monday, the trip being taken under the auspices of the Stake presidency, the choir and brass band. J. C. Rich sent his sail boat, the Ann Allen, over from the south end of the lake for their benefit. It holds sixteen persons. While on the lake the club sang several songs. The beauty of the melody floating over the water enchanted the throng left on the shore. The boys made many friends and will have many fond recollections of their trip to Bear Lake.

A Harvester and Other Accidents.

A young man named Oliver Hansen, of Myrtle, got his arm caught in the knives of a self-binding harvester a few days ago. He immediately called "whoa" to his team and they stopped instantly, or the arm would have been taken off. As it was it was not badly lacerated.

John Rees cut his hand with a pocket knife the other day, severing one of the arteries. Dr. Parkinson sewed up the wound.

Nevertheless, the injuries sustained by little George Painter, it is now believed that he will recover. If he does, it will never strengthen the intersection, as his skull was fractured all the way round, from one temple to the other, and on the left side was badly depressed.

Notes and Personals.

Messrs. Joseph Kimball, T. B. Cardon, John Squires and John McAllister returned last Thursday evening from a visit to Bear Lake and the Bothwellsville mine. They are well pleased with the mine, which they intend to develop next season.

W. S. Tabernacle on Friday evening exhibited a scope of the "Wonders of the World" here, with about thirty members.

Mr. S. Porter, an oiling engineer of the new waterworks system, has been in Logan for about a week. The water was turned into the pipes on Thursday, and they seemed to stand the test admirably. The gauge indicated a pressure of 130 pounds, and even then the full pressure was not on.

NOW THAT RAILWAY.

Promise to Run Trains into Salt Lake City by December 1st.

THE NEW YORK PROPOSITION.

Fifty Million Dollars Behind It.—Details to be Given the Chamber of Commerce.

The gentleman who wrote to the Chamber of Commerce regarding the proposed railway from Clear Creek to this city and on to the West, had an interview today with President W. E. Hulburd and Secretary L. A. Benton, to which he gave a general outline of the plan of the proposed road. For the past seven months, he said, a corps of engineers have been going over the intended route, and have completed their labors. The projectors of the road are now ready to build.

The gentleman is a representative of a New York company, he states, but does not wish to figure with his name in the newspapers until the project, which he believes to be sound, comes direct from the promoters of the scheme, who are behind by fifty millions of capital which they are ready to put into the road. A proposal is to be made to Salt Lake for right-of-way, ties, rails, etc., which, if satisfactory, will bring the road here. The papers were made out but a suggestion from New York requires a slight change, and when that is made, the whole matter will be laid before the Chamber of Commerce.

The road is to be built from this city to Clear Creek and the coal mines, coming down through Parley's canyon, and leaving a depot at the foot of State street. From there it will go west to the west line of Utah, about twenty miles north of the present proposed line of Deep Creek. From Central Nevada it will bear southwest to Los Angeles. It is to be the western connection of a great eastern trunk line which the gentleman declined to name at present.

Said he: "If we can make arrangements, the road from Salt Lake to Clear Creek will be completed and trains running by December 1. The western division will be pushed over the Desert in the winter. Our company means business."

To this Mr. Hulburd responded "Make us a straight, solid proposition, and we will guarantee that Salt Lake will be on the road in suitable form."

It is the understanding that another conference to deal with the final proposal will be held on Saturday.

THE SUMMER SCHOOL.

Increased Attendance and Enthusiasm.—Program of Exercises Today.

The devotional exercises today at the opening session of the second week of the Utah Summer school were conducted by Dr. White.

The subject of United States history was taken up as the first branch to be discussed. The class in history took up first a brief examination of the leading features of the Declaration of Independence, as follows:

1—Inalienable rights, life, liberty and the pursuit of happiness.

2—Governments, instituted among men, should derive their powers from the consent of the governed. (This principle stands in striking contrast with the governments of the old world.)

3—The charges of the indictment against the king of Great Britain. (Read each charge and then ask the history to convert to common fact.)

4—The manner and spirit in which repeated petitions were presented to the throne. (How were they received and treated by the king?)

5—Absolutely to all allegiance to the British crown.

6—That the "United Colonies" are, and of right ought to be, "free and independent states."

7—They have full power to levy war, conclude peace, etc., etc.

8—Lives, fortunes, and sacred honor pledged in the support of the Declaration of American Independence.

Principles of teaching were next elaborated by Dr. White, who said the first element of thinking is generalization. Generalization is a better word than generalization. By the process of comparison we form a generalization. By comparison we look out common qualities of objects and then synthesize these into general concepts. Comparison is the basis of classification. In this way we get wisdom. The natural element of thinking is [illegible] of judgment. Just as long as thinking consists in [illegible] it is [illegible]. The element of judgment is a thought. The expression of a thought is a sentence. Hence by judging we get sentences. Little children perform these mental acts. Some teachers make a mistake in teaching too soon, although they do not think. The child must not be kept on mere particulars. When we go beyond the objects within our experience to similar objects everywhere we form a definition or reason. When we find that a given quality is necessary we have a reason and ever affirm it of similar objects. This is more than a judgment—it is a reason or definition. Primary teachers have definitions upon teachers when they should have instructions simply. Leading definitions we state in things beyond the reach of the senses and our experience. "This is how I know there is a God." The speaker merely touched upon the subject of definitions. The subject of definition is to be taken up later.

Prof. Norman began a series of lessons this morning on mathematics and physical geography. After pointing out the different methods of teaching the subject, the speaker illustrated, was carefully considered, the earth is a planet among the other planets, their names and a descriptive sketch giving a clear bird's-eye view of the earth. The relations of a book (lesson) were taken up and discussed by the class.

Work in kindergarten by Prof. Boldenfeld, Butler—Francis.

Steps—(1) The new method of the idea of [illegible] (2) The selection of materials to meet and stimulate activity (3) the combination of materials serving different purposes. Children, he said, fail to gain a mastery of this subject not because they like to do so. It is for the short, but because the fundamental principles involved are overlooked. Simplicity is the most element of success in teaching numbers.

Moral training was next discussed by Dr. White, who said that the foundation is made [illegible] conscience is natural. Rewards to excite a spirit of emulation by giving prizes, badges, honor seats, etc., are wrong in spirit, because they appeal to the minds of those who do not need the stimulation, and do not reach those who do. The desire to excel is so strong that emulation takes over to freely motives, which is unknown. The immoralities and privileges usually given should be discontinued. Time the pupils to recite by class association to study.

Normal methods will be considered tomorrow.

NOTES.

Hilton Corey, of the *Salt Lake Tribune*, will have a very complete report of the proceedings of the Normal for the Sunday issue of his excellent paper.

Prof. Angelberg will give a chalk talk on Thursday evening of this week. It will certainly be an enjoyable exhibit.

Prof. Andrews will deliver a lecture tomorrow evening in the Fellows' hall, Subject, "Our Public Schools: Their Debt to the People."

Prof. W. T. Eddington is winning many friends by his pleasing and efficient management of the Normal.

Quite a large number of the teachers who were enrolled this morning, and the two hundred mark will soon be reached.

THE PROVO SCHOOL.

Teachers Have an Enjoyable Time at the Lake.—Dr. Babbitt's Lecture Yesterday.

According to previous arrangement the Teachers' excursion left the U. P. depot at Provo at 8 a. m. on Saturday, August 12th, returning in the evening. Several hundred teachers were on board, and many citizens took advantage of the cheap rate to have a trip to the briny lake. After a week of hard work, they were like a lot of school children turned loose for a holiday. In strict conformity with psychological instructions they were concentrating their attention on the business in hand.

Dr. Baldwin was of course the guest of the occasion. Principal R. Lindsay and wife, Supt. E. A. Wilcox, Prof. George H. Brimhall, Superintendents Worlen, Greenwood, Shirley and others, and Mrs. Davis, wife of Prof. Davis, were of the immortal party. Dr. Baldwin stopped at Salt Lake City for a few hours, during which he had upon President Woodruff, his circumstances and proposal.

Dr. Baldwin states to a News reporter that he had never enjoyed a bath so much in his life as in the Great Salt Lake. "If we only had the sea in Texas!" he exclaimed, "It is glorious!" He expressed himself charmed with Utah and its people, and in speaking of educational matters said that judging by the strides made in the past few years in his profession now we would not have to send our young people abroad to gain knowledge, as Utah would have as fine educational institutions as the United States could boast of. Though sixty-five years of age, Dr. Baldwin is mentally and physically sound and vigorous, and speaks quite sanguinely of coming back to see if the glorious promises of the present are kept a decade hence, when we will be in the twentieth century.

The announcement has been made in several of the Sunday schools and also at the session of the Normal school held in the L. D. S. academy, that Dr. Baldwin, of Texas, would address the Lehi ward Tabernacle at 2 o'clock on Sunday, August 13th, and at the appointed hour a very large congregation was gathered together to listen to his remarks. His subject was the "Psychology of Hypnotism." He took his text from the Sermon on the Mount, referring to those whom the Savior said were the blessed. In answering the question, "What is happiness?" he stated that it was obedience to the divine law. He was listened to with great interest.

More's the Pity.

Three of the convicts who broke away from the jail Monday period by cutting week are still cooling in the county county cooler.

Eastern Utah Asphalt, Uinta Mesa Peat & Elaterite, of the Utah Asphaltum Co., of Ogden, were in Provo last evening on their way home. They informed us that they had been down to Springville making a car of sand asphaltum. They will test this sand asphaltum, and if it proves good material for paving they will use it in paving the streets of Ogden. They expressed great confidence in these deposits being as good as the California product. If the asphaltum proves of good quality about fifteen cars will be shipped to Ogden this fall. The Gilson Asphaltum Co. have temporarily closed down their mines. This will be felt very severely in this county, as these mines afforded more employment for labor than any one industry in the county. It is not the object to view in despair up their resources here in Utah, and as soon as that is accomplished they will resume operations.

WITHIN OUR GATES.

Miss Pauline Amer of Birmingham, Alabama, is visiting her brother, Mr. J. S. Amer, at 56 East Third South. She remembers very inviting season of the year.

* * *

W. W. Wood, for many years the popular and efficient agent of the Union Pacific railway at Logan, is here on a visit, accompanied by his wife and sister. They are at the Lemp place.

* * *

Phil Margetts and wife are off on a Bear Lake trip in the buggy. They will visit Paris and Mr. Margetts will show Mrs. Margetts the first house he ever paid rent for in Paris.

* * *

Howard J. Rey, general Western passenger agent of the Rock Island, and Mr. Phil P. Harris, of the passenger department of the same great line, are spending a few days in Salt Lake. The gentlemen are at the Knutsford.

SAVINGS BANK.

THE SECURITY SAVINGS BANK
