NOW FOR CANAIGRE.

Words of Commendation From a Practical Tanner.

He Sends a Sample of Canaigre-Tanned Leather and Gives Interesting Facts Concerning the Plant.

EL PASO, TEXAS, August 17 1895.

Editor Deseret News:

Having noticed in the Salt Lake City papers at different times articles upon the culture of canaigre for the encouragement of its growth in Utah, I beg to give this information to those who may be interested in this valuable plant.

The first consideration in producing an article is a market. Canaigre is not an article of food for either man or beast. Every pound produced must be sold for cash; and the Utah get-the-factory to use the crop when it is ready, is entirely out. If not, it is now time to think about it. There is no better advantagement to the producer than to furnish him a market for his product. The writer is informed that there has been planted in Utah considerable canaigre. Such being the case, the next proper thing would be to erect a small tannery, say one capable of tanning not less than sides of leather per week. Such a plant put in operating order until it would pay its way would cost about $17,000. A tanner who understands the use of canaigre, of which there are very few in the world, can make leather in one-half the time that it takes to tan with oak bark. I enclose sample of sole leather tanned with canaigre in forty-eight days, which I will warrant to wear as long as any leather on the market. Try it.

There is a tendency to cultivate this crop in California, Colorado, Kansas, Texas, and even Florida; and small shipments have been made to other states and foreign countries. But the high altitudes of western Texas, northern Mexico, New Mexico, Arizona, and Utah, seem to be the natural habitation of the plant, and the section where the growth is most prolific and the yield of tannic largest. There are strong natural reasons for these conditions. It is well known that starch is convertible into sugar, sugar into alcohol, and alcohol into acids. The intense sunlight of the above regions is extremely favorable to these changes—in fact essential to the results. The same great crown both in high and low altitudes will be found to yield more sugar and less acid in low altitudes and more acid and less sugar in high altitudes.

In canaigre, high yields of tannic acid are essential to permanent success. Therefore it may safely be inferred that this crop grown near the sea coast will in the course of a few years change its character entirely and become unfit for the purpose originally intended, and that such regions can never compete with such countries as Utah for the uniform high quality of its product.

It is quite common to note in articles written about canaigre the words: "Barks are getting scarce and canaigre will be needed to take their place." While this is true, the writer can safely say that canaigre is more than a substitute for any of the barks. It makes an entirely different quality of leather. Upper leather made with canaigre is softer and more pliable and stronger than that made with bark. Sole leather made with this root appears to be soft but it becomes hard and glassy when worn for a few days.

A crop of canaigre will not figure on paper like crops of oranges, lemons strawberries, etc., and then prove a flat failure for want of a profitable market at the critical moment of maturity. This crop figures more like a four per cent United States bond; principal and interest always available, with no chance for loss of either.

It differs from all other crops in being the only one where you get your seed back with the increase of growth. The seed root does not decay, but frequently increases in size and weight, if the crop does not receive water during its period of rest, say from June to September. Canaigre needs very little water. Frosts, heat, floods, drouth, insects, and disease have no terrors for this crop. It may be left in the ground safely for five or six years, and will constantly increase in weight without cost for storage or insurance. It need not be dug until a market has been secured, and in this respect is unlike any other crop which must be harvested when ripe, and then has to meet an unprofitable market or be stored under expense. If a market is at hand the crop need not remain in the ground more than two years.

Yours very truly,

J. W. BROWN,
General manager El Paso Tanning Co.

Weather and Crops.

Idaho State Weather Service for the week ending Monday, Aug. 19, 1895.

The past week has given cool nights and warm days, with an abundance of sunshine. High winds were frequent over the southern section, occurring nearly every afternoon; they have caused grain to shrink somewhat in places where moisture was deficient. Frost occurred in the extreme northern section on the 14th and injured potatoes, but it is not thought that the crop is seriously affected; in a few places in the eastern section local reports on the 13th and 14th damaging tender garden stuff, but not to a great extent. Late reports of frosts of the week previous indicate that, in some instances, crops were not damaged as which at first reported.

The rainfall during the week was very light and confined to a few isolated showers, and a severe hailstorm which occurred on the 8th, which was in Blaine county, destroying the grain in several sections. The ground is very dry and many fields of grain are drying up prematurely. Water of irrigating streams is being used to a great extent in some parts of the state. In Blaine county it is estimated that crops will be from 15 to 25 percent owing to continued dry and windy weather.

Grain has ripened rapidly and indications point to an average crop with the exception of the late sown, which will be light. Harvesting is generally over in the south, and in the western portion threshing is in progress and nearly completed. In the extreme northern section much of the late wheat has been threshed and the harvesting of other grains is progressing. Cutting alfalfa has begun in portions of the northern section.

Potatoes are generally doing well where properly irrigated. Beets have suffered from the dry spell and, as a rule, will not be a large yield. In the northern portion of the state some of the early planted have opened prematurely, but the late ones are green and growing vigorously. Corn is doing well, but in places has been slightly injured by cool nights. The oats are in an excellent condition, promising a very sufficient harvest. The hops in the southern section have now begun to form and a fair yield is promised. Quite a number of farmers in Lewis county tried the experiment this season with good results. In the county adjoining—Idaho—hops are not ready for market. Considerable are being made of the acreage in Lewis and Idaho counties.

The apple crop is about a generally well and very extensive one this year, though some apples have fallen off in quality in portions of Nampa and Payette valleys, the white fly and the codling moth being in some other parts of the state quite numerous, but not to any material extent. Peaches are ripening fairly well.

Fruit is generally in a thriving condition. In the northern section early apples and plums are heavier and cheap.

D. P. SHOALTER, Director.

Central Office, Boise City, Idaho, August 19, 1895.

JULY REVIEW.

The month opened with clear and unusually warm weather prevailing in all sections of the state; showers were general on the 3rd, 4th and 5th, followed by a long period of dry weather, broken in only a few places by thunderstorms accompanied by showers which were poorly distributed and too light to be of material benefit to crops. Light rains were reported over a large portion of the state from the 24th to 27th. Frosts occurred in portions of the southern section on the 6th, 7th, 8th, 18th and 29th, the first two dates being the coolest days of the month; the warmest were the 23rd and 24th.

Temperature—The monthly mean temperature for the state was 68.2 degrees, an excess of 3.6 degrees from July of last year. The highest monthly mean temperature was 73.4 degrees at Lewiston, and the lowest, 56.2, at Lake. The highest temperature recorded in the state during the month was 105 degrees at Payette on the 25th and at Lewiston and Gibbons on the 22nd; the lowest was 23 at St. Anthony on the 8th, making an absolute temperature range of 82 degrees for the month. The greatest local monthly range of temperature was 31 degrees at St. Anthony, and the least, 40, at Dairy.

Precipitation—The average monthly precipitation for the state was 0.61 inch, an excess of 0.67 inch over July, 1894. The greatest amount was at Warren, 1.60 inches, at the least, 0, at Carrthon. The greatest amount in any twenty-four hour period was 1.50 inches at Fresno on the 5th. There was an average of three days with precipitation during the month.

Weather—Average number of clear days 20, partly cloudy 8, and cloudy 3.

Wind—Prevailing direction, west; average hourly velocity (from records at Grangeville and Idaho Falls), 7.8 miles; maximum velocity (at Idaho Falls), 38 miles per hour from the southwest, on the 5th.

Miscellaneous phenomena—Frost—Gibbonsville, 18th and 20th; Hailey, 18th; Idaho Falls, 6th and 15th; Paris, 6th, 7th, 8th, 18th and 20th; St. Anthony, 6th, 8th and 9th; Salmon, 18th and 19th; Soldier 18 and 19; Swan Valley, 6th, 7th, 8th, 9th, 11th, 12th, 18th, 29th.

Hail—Dairy, 31st; Fraser, 30th; Marble, 30th; St. Anthony, 8th; Salmon, 8th; Warren 5th and 31st.

Solar Halos—Salmon, 1st, 11th and 28th; Swan Valley, 19th.

Thunderstorms—Birch Creek, 30th; Dairy, 30th and 31st; Fort Sherman, 4th, 20th, 28th and 30th; Fraser, 3rd, 4th, 5th, 8th, 22nd; Grangeville, 4th, 5th, 6th and 30th; Hailey, 31st; Idaho City, 31st; Idaho Falls, 28th; Kootenai, 3rd, 5th, 8th, 15th, 17th, 18th, 30th; Lewiston, 4th and 30th; Marion, 30th; Murray, 27th; Nampa, 31st; Salmon, 8th, 28th and 30th; Soldier, 31st; Swan Valley, 4th, 7th, 8th, 9th, 28th, 30th and 29th; Warren, 31st.

[illegible]

A little girl lately asked her mother how to pronounce Cæsar's famous in conic utterance. "I really don't know what to tell you," was the answer. "When I studied Latin, we said 'Veni, vidi, vici,' exactly as it is spelled. A few years later they began to use what was called the continental pronunciation and said 'Veeni, veedee, veetee.' Now I hear college students would tell us that it was 'Wayne, waydee, waytee.' The enigmas was appealed to accordingly and announced: 'No; there is a later way still. We say, 'Wainee, weedee, waitee,' for the very latest.' As Lowell complained in his old age, who can pretend to keep up with the giddy rate into which the chanson is being turned by modern masters of them?—Philadelphia Press.

A Means of Disinfecting Wells.

Every year we get a considerable crop of wells and spread disease. Since Dr. Frank has brought under the notice of the Polytechnic society of Berlin a means of disinfecting wells, which he employs with success. It consists in suspending in the mouth of the well an earthenware jar containing 50 to 100 grams of quicklime, which, being reducible to air forms a dense vapor that fills the well, and is absorbed by the water, which disinfects it. The water is at first less straight tasted immediately after lime, but is whole [illegible]

Beecham's pills are for biliousness, bilious headache, dyspepsia, heartburn, torpid liver, dizziness, sick headache, bad taste in the mouth, coated tongue, loss of appetite, sallow skin, etc., when caused by constipation; and constipation is the most frequent cause of all of them.

Go by the book. Pills not and yet a box. Book free at your druggist's or write B. F. Allen Co., 365 Canal Street, New York.

Pure Blood

In the source of the restoration to health which Hood's Sarsaparilla gives.

"It gives me pleasure to recommend Hood's Sarsaparilla. It has cured me of many complaints, and purified my blood. I was troubled with my blood, had big disease and other troubles which kept me from doing of my duties. For a long time I had to walk with a cane. For several years I was very rheumatic, broken down. I had the grip in a severe form. I procured six bottles of Hood's Sarsaparilla and I built me up. In my early years I was a consumptive. All my ailments have gone and I feel the new power. I sing with enthusiasm the praises of Hood's Sarsaparilla." Mrs. A. A. CLARK, Hollywood, Cal.

Hood's Sarsaparilla

Is the only true blood purifier prominently in the public eye today. Try it.

Hood's Pills

You Can't take too much of HIRES' Rootbeer

It quenches your thirst. That's the best of it. Improves your health. That's the rest of it.

A 5-cent package makes 5 gallons. Sold everywhere. Insist on having HIRES'. Take no other. Prepared only by Charles E. Hires & Co., Philadelphia.

WHY?

CARTWRIGHT & HUMELBAUGH,

302 Progress Bldg, 149 Main, OPPOSITE AUERBACH'S,

are expected to be the leading tailors of Salt Lake City, and guarantee lower work than anyone.

BECAUSE skill and workmanship are necessary, all of which they possess.

BECAUSE fashion plates are not enough, pleasing and accommodating manners are necessary. They have them.

BECAUSE experience and success are necessary. They have the same.

BECAUSE business methods are necessary, they have adopted cash for work.

PRICES—Yes, they will up to date also. Note them.

Lined suits for one-third. Gent's fine suits, $20 to $40, ever heard of—cold filling, 25 cents; amalgam, silver, cement and gutta percha fillings, 50 cents; crown and bridge work, separately for the tooth, at 1 per tooth. The only cure fillers set of teeth, at $5. All work warranted.
