AN OPINION GIVEN.

Recently Mr. J. D. Thomas, of North Dakota, visited the Shenandoah Valley, Virginia, and after carefully examining the country located in Winchester, he witness Mr. V. Bierbower, Land and Immigration Agent, Baltimore & Ohio Railroad, Baltimore, Maryland, as follows: "I have been in nearly every state and territory of the United States, and am frank to say opinion that the valley surpasses all other sections in the Union. The lands are low in price, and produce profitable crops. I thank you for directing me here, and would those seeking pleasant and profitable homes to locate in this country."

Dr. Price's Cream Baking Powder
World's Fair Highest Award.

The direct line to Kansas City, St. Louis and Atlantic seaboard, is via the Missouri Pacific Railway, from Pueblo. Through sleeping and dining cars, and all connections made in Union depots in the city lines. If you are going East and care for a delightful ride through the grandest scenery of the Rocky Mountains or coast, see that your tickets read via Missouri Pacific Railway. Elegant chair cars positively free to holders of regular train tickets.

Y. M. C. A., Holmes building, 251 State street. Meeting for men only Sunday at 4 p. m. Leader, Mr. E. Smith. Subject, "Wherewithal shall a young man cleanse his way?" Psalms CXIX, 9. Singing by quartette. Free seats, warm hearts, and a cordial welcome to all men.

THE JENNIE WILSON CASE.

A Horrible Sequel to It is a Commercial Street Lodging House.

Jennie Wilson, the young woman whose attempt at suicide on Thursday night, was related in last evening's NEWS appears to be the victim of a train of most unfortunate circumstances.

Her sufferings from the deadly drug left her mind temporarily affected and yesterday afternoon she escaped from the home of Officer Busby and last night was found on the street by a couple of men who seeing her helpless condition induced her into a cheap lodging house on Commercial street where she was found unconscious at an early hour this morning, the victim, the police and Dr. Iver say, of repeated brutal outrages.

Two men were found in the room with her and placed under arrest. Later they were taken to jail where their names were given as Ernest Dowes and Fred Grolle. The woman went into frequent spasms and for hours required the constant attention of a physician.

NATIONAL GUARD PARADE.

Interesting Correspondence in Relation to the Matter.

The following letter addressed to Adjutant General George M. Ottinger is self-explanatory:

Dear Sir—Referring to our recent conversation concerning a series of military drills at the Utah Territorial Fair, in October next, by the Utah National Guard, I desire to again bring the matter to your attention. It would be a great benefit to the Fair and also a great treat for the public, and if some arrangement be made to have a great series of drills at the Exposition. It would also show the people just what is being done in this line, and also what the government has done in sending uniforms and accoutrements to the new organization.

Rather in beautiful fashion—in every particular.

Patronized by first-class people.

Go to beautiful Saltair and be happy. Round trip 50c.

Yours very truly,
GEORGE D. PYPER,
Secretary D. S. A. M. Society.

FOR GREATER SALT LAKE.

The Chamber of Commerce Sounds the Call.

To the Salt Lake Public:

The Chamber of Commerce membership fee have been reduced from $50 to $5.

The dues has been reduced from $50 per annum to $1 per month.

These sweeping reductions are justified by the belief that more can be accomplished by the Chamber of Commerce with a large membership and small payments than can be accomplished by a small membership and large payments.

The Chamber of Commerce is proud of its achievements.

To test the Utah Exposition car on its great pilgrimage.

It inaugurated and carried to a successful conclusion a movement to reduce freight rates to and from this city, thereby saving annually to our people over $100,000.

It was a strong factor in securing the location of Bowpper smelter plant, which forever settles Salt Lake's supremacy as a smelting center.

It strengthened the price of silver bullion and lead at the California Mint.

Has published and distributed many hundred thousand articles and pamphlets descriptive of our climate, resources, scenery, climate and south attractions.

It has met at all times a reliable source of information, and has answered thousands of inquiries from other states and territories.

It has rendered other services to the community of incalculable value in promoting its growth and prosperity.

With a fair or full or successful, what may not its future be if the public spirited citizens of Salt Lake will give it their aid and support?

And why is this aid and support withheld?

It cannot be because of lack of public spirit, for that has been demonstrated upon a thousand occasions.

It can therefore only be because of a total failure to appreciate the advantages of instituting in our midst an active, healthy institution, devoted to the promotion of the general welfare.

Let us throw off this indifference. Let every business man and property owner put his shoulder to the wheel, and altogether, not one at a time, push the city on its way to greatness.

Let the cry be "Greater Salt Lake!"

We are standing at the dawn of statehood. We are now a united people.

In the late financial cyclone we were not even shaken. We have recovered unbroken—a climate unrivaled, scenery incomparably attractive and most wonderful. There is no reason why, before the close of this century, we should not have a population of 100,000 souls. Are there not 500, are there not 1,000, business men and property owners in this city who can afford to pay the paltry sum of $5 each a day towards making the Chamber of Commerce a power for good?

The undersigned, the Directory of the Chamber, have determined to settle question of the people.

Application blanks will be furnished by the secretary upon application, and our business men will be called upon by a committee of the directory and urged to respond to this call.

Directors.

B. Y. A. Summer School at Provo.

PROVO, Thursday afternoon, Aug. 9.—At 4 p. m. Dr. Rusdale resumed discussion of the art of teaching, taking up the subject where he left it yesterday:

I was engaged when the hour closed in considering which was the better way of presenting certain subjects, inductively or deductively. Figures were considered except geometry. Should this be taught inductively or deductively? Is it a deductive or inductive study? We cannot impose any arbitrary methods on a study that we please. Geometry is a deductive study. We begin with definitions and axioms, self-evident mathematical truths. We take simple truths and axioms and build a theory. The great value of geometry as a disciplinary study is its deductive methods. I am speaking of the Greek geometry, such as is usually presented in text books. There is such a thing as inductive geometry. It is a sort of outlandish experimental geometry. Spencer's little book on this subject is called inventional geometry. This is being introduced into the school room to good advantage, I think. It has many inductive elements, for the pupil must fall back on previous knowledge and observations. It is an admirable preparation for geometry proper, and can be applied directly in affairs of life, and I believe it this were taught instead of some other branches it would be better. There are many samples of the applicational percentage that should be left out. Teach the doctrine of percentage and let after life supply the application. Cube root is an almost useless study in the common schools, since only a limited number of studies can be taught, take those of the most educational value. German may be taught inductively and in some of its features taught deductively. A primary class is to be taught inductive grammar. I write "horse," "dog," and other words with which the child is familiar, and I call their attention to the fact that all these words are alike in being names of objects. I tell them they are nouns, and that the definition of the word noun is "name." Now the deductive mode would reverse the method or presuming I could teach them inductively or deductively. Now in your opinion how should it be taught? Most of you prefer induction. I don't think it is very important which method is used.

There are certain rules of etymology we will consider. The possessive case is not written like the nominative. I wish to teach children how to write it. Shall I give them rules, or spread out the pages of a book and let them discover for themselves that the nominative and "s" follow the noun. The science of grammar is inductive. The oldest Greek grammar we have of Dionysius Thrax, was written only about two hundred years before Christ. We teach language by imitation. No child would ever learn to talk if it were required to wait till it had been presented with grammar rules. Languages is an art. You all agreed that the noun would be best taught inductively, now how about the possessive, assuming that the pupil knows nothing from his study of English; would you teach it inductively. Some of you I see have not yet made up your minds. Well, I think in this case the rule first would be better than sending the child to hunt for examples. It, however, depends upon the age and previous instruction the child has received in language.

SYNTAX.—The nominative case governs the verb. This was not invented, but discovered. I am to teach it. Shall I write examples and let them go through the process of the original discoverers, or shall I give them a rule as a truth established and let them prove it inductively. The educational value of grammar is very different from what most people suppose. Is it an art or a science? Lindley Murray said it was the art of using the English language. It is not. It is a science fundamentally considered, and a very metaphysical one. Difficult subjects I consider make a very great mistake in the capacity of their pupils for mere physical strength, and often it is regretted the teachers and sometimes I think it is not understood by the scholars themselves.

Metaphysics—Shall the pupils be sent to the laboratory to investigate for themselves, or given the law? How were these principles originally made? Will it be necessary for each human being to follow the laboratory method, or shall we advance to the point now occupied by the human race, and go forward from there? Suppose the pupil comes to the study of metaphysics at the age of sixteen, he already knows many things about the properties of physical things. He may assume that they are able to study deductively. I would use the laboratory as necessary to the critical teaching. The text and lecture first, and the process by the laboratory experiment afterward.

There are a good many indagogical maxims in circulation, some of them sensibleness, but some they are only half truths. One is "Never tell a child anything it can find out for itself." (What an absurdity! It will find out a poker lifted hot if you let it alone, but it may be at the expense perhaps of a singed head. Or perhaps he will learn what hot water is by drinking a pint, and if you think his knowledge would be improved you can hold him and pour it down him. When I came to Salt Lake, I naturally wanted to know how far it was to Provo; following up this maxim—no one must tell me, so in order to find out I must take a surveyor's chain and measure it. This maxim does convey a great truth, but I think you will all agree with me that it needs modifying.

FRIDAY, AUGUST 10TH.

After usual opening exercises, and the adjustment of some minor details, Dr. Rusdale resumed the Science of Teaching, briefly reviewing the last lecture of yesterday, placing on the blackboard the elements of the science of teaching, as stated yesterday.

The educational ideal is deduced by the condition of the mind modified by our environments. All societies are gradually teaching the same things, and are in the same general stage of civilization, were it entirely otherwise—for instance, the condition of ancient Peoria or a very savage people We would be different. Peoria's idea was and to be that young men were to be taught to ride a horse, use a bow, and tell the truth, and while that was very good for that time and people, it would hardly serve us today.

The mental activities are three in number: 1, knowing; 2, feeling; 3, willing. Will has two forms, volition and choice. Every activity of the mind can be classified under these heads, which one, can only be determined by analysis. There are other words in express these same ideas but these will suffice. This classification is important. All these forms of activity are carried on at the same time. They all enter in to any full state of mental activity. Take your mental state at any given time and all these faculties are blended together. This is a fact, but in the beginning the initial point is a previous knowledge. Dr. Harly, in his illustrations of psychology, says: "A boy goes into an orchard. He sees fruit, he knows it. He experiences a desire for it by a previous knowledge of its pleasant taste. He sees, he desires, he determines to have it. This last is an act of will-choice, the fact of stretching out his hand and taking it is an act of executive will. A girl in a raincoro determines to go in the house, and that is an act of will, by choice, with only the condition of agreeableness substituted for those which are disagreeable." These examples show that the point from which the stream starts is knowledge or cognition. All these faculties blend, as the stream flows through life, or persons. There are states of mind we denominate as feeling states, willing states, knowing states of mind, but we do not mean that all others are excluded, but only that one predominates. One element is emphasized, giving color to the state of mind we call by name. Sometimes two are prominent and one subordinate. While all are present they are very apt to be unequal in force. An act of cognition gives to the initial point of action, but as soon as active is started all the elements are present. I must know something before I can wither think, will or feel. I cannot make a choice unless there are two things open for me to choose from. Feeling begins to react as soon as the stream of action is started to the point of knowledge. These things are interdependent, and inseparable.

Suppose you give a ball to a child who has never seen a ball before. He recognizes it in a general way and he experience it is a general way and he experiences it is excited. He accidentally touches it. It rings; that gives him knowledge, and further interests him. He wills to examine it in all its parts. He chooses to see if it will ring again, or in some other position. He uses his executive powers to investigate. The first was an act of knowledge, the second interest which energized will, and brought into play all those faculties of the mind.

CHILD STUDY.

The class in child study held its last regular session this morning at 7:45. The subject was the "Development of the Intellect." The mind was carefully followed by Instructor Cluff. The growing intellect, from the time the child can distinguish facts and localize sound, was traced to the period when the fully awakened consciousness of all faculties.

The line of investigation indicated for the immediate investigation was "Development of Language." They were told to note carefully the obstacles the child has overcome by the child in learning to speak, distinguishing the location of these difficulties, whether they be in the ear proper, the association of sounds with the gangles centers, or the muscles involved.

SLOYD.

J. L. Tomsheni.—Paper work was the subject of the morning's lesson. The materials used are common paper, colored paper, tissue, card board, paste, glue, mucilage, twine and slates. The tools are needle, scissors and knives; also aids in the way of drawings, patterns and books. The lesson embraced the construction of all geometrical solids.

SOYED.

Mr. Oldham, sub-of superintendent of Carbon county, is taking the lectures of the B. Y. Academy. He will remain for the official institute.

The official institute will convene on Monday next. The counties interested are Salt Lake, Utah, Wasatch, Millard, Emery, Uintah, Piute and Sevier.

A musical and literary entertainment will be given on Wednesday evening, August 15th. All the prominent musical people of our county and those sojourning with us will take part in the excellent program.

Quite a number of persons were allowed a peep at the moon through the Academy telescope last night. The night was beautifully clear, and an unusually good view obtained.

There are several important departments of the Academy of which no adequate idea can be given in a report. Notably the language classes, under Prof. Whitely, Mr. Miller and Mr. Dana. Also the higher branches of mathematics, differential calculus, and trigonometry, taught by Mr. Jensen.

Highest of all in Leavening Power.—Latest U. S. Gov't Report.

Royal Baking Powder
ABSOLUTELY PURE

Kind Always Leads.

The Great Soap Company securing the second prize at the Worlds' Fair, is a hundred victory for their Ivo Flake Soap. The company seems determined if quality and variety will prevent our people from using impaired soaps, that they will supply the demand. They are now adding to their already extensive plant, machinery for manufacturing milled or settled soap and will in a few days place on the market a full line of these goods, which they guarantee will be equal, if not superior to any in the market. They will also manufacture a superior quality of white floating soap.

Grant's Silver Dust Washing Powder also is coming into great favor and the public will do well to support such a worthy institution. We predict a great future for the Grant Soap Company.

Keep your cards and other valuables, including money, in a safety deposit box at Zion's Savings Bank & Trust Co. Rent of the vaults very moderate be a few cents per month. Ladies specially invited to call and see vaults.

EXCURSION NORTH, VIA UNION PACIFIC.

Thursday, August 16th.

Thursday, August 16th, is the date of the annual low rate excursion via the Union Pacific, to all points north as follows:

STATIONS.	RATE.	LIMIT.
Brigham,	$1.50,	15 days.
Logan,	$2.50,	15 days.
Franklin,	$3.25,	15 days.
Preston,	$3.50,	15 days.
Oxford,	$3.50,	15 days.
Pocatello,	$4.50,	15 days.
Idaho Falls,	$5.00,	15 days.
Market Lake,	$5.00,	15 days.
Soda Springs,	$5.50,	15 days.
Montpelier,	$5.00,	15 days.
Bloomington,	$6.00,	15 days.
Bailey,	$6.00,	15 days.

This will be the only excursion of the season to northern points. Train for Cache Valley points will leave at 2:40 p. m. For all other points at 8:30 p. m.
