DESERET EVENING NEWS.

THURSDAY, JANUARY 18, 1894.

FRAGMENTS.

The Eighth quorum of Seventies met in the vestry of the Twelfth ward meeting house tomorrow (Friday) evening, at 7:30 o'clock.

The charge against John H. Rice of stealing pulleys from the Nelson and Lake Manufacturing works has been dismissed by Commissioner Glassmann.

The Hon. W. H. Smith, of Ogden, will deliver an address before the students of the University of Utah tomorrow evening. Subject: The Legal Profession: its Past Achievements, its Present Duties.

Railway Officers.

The Great Salt Lake & Hot Springs railway directors have elected the following officers to serve for the ensuing year: President, J. G. Woolmans; vice-president, J. J. Daly; general manager, Simon Bamberger; secretary, Charles E. Pearce; auditor, A. C. Manion; treasurer, Frank Knox.

In the Land Office.

The register and receiver of the land office have given a decision in the case of the Central Pacific railway vs. Alphonso H. Lawrence, for a desert entry of forty acres in section 13, township 8 north, range 6 west. The contest was based on an allegation that the ground has been abandoned. The entryman failing to put in an appearance, and no proofs of the land has been improved.

John A. Aiken, of Castle Dale, Emery county, has filed an application for a desert entry of 240 acres in sections 25, township 16 south, range 5 east.

THE CHAMBER OBJECTS.

Resolutions Passed Condemnatory of the Bill Providing for the Taxation of Debts.

The following self-explanatory resolutions have been passed by the Chamber of Commerce:

Whereas, There is now pending in the lower house of the Territorial Legislature a bill providing for the taxation of debts secured by mortgages and trust deeds upon real and personal property, and

Whereas, The burden of such taxation would be borne, not by the loan capitalists and money loaners, but by the borrowing classes, the workingman who borrows sufficient funds wherewith to build a home, and the enterprising citizen who is interested in the progress, development and upbuilding of our Territory, and

Whereas, The enactment of such a bill would be unjust to our citizens, and injurious to Utah's interests, and would place the capital necessary to the development of our resources beyond the reach of our people, thereby prostrating our industries, and retarding our growth and prosperity, therefore, be it

Resolved, That the board of directors of the Salt Lake Chamber of Commerce in behalf of the members of said chamber, enter our earnest protest against the passage of said bill, and be it further

Resolved, That a copy of these resolutions be forwarded to his Excellency, Caleb W. West, Governor of Utah, and to the honorable members of the Territorial Legislature.

WORKING A COAL MINE.

Suggestions as to the Best Way for Alma District.

Cost of Operation and Probable Yield.

—A Hint to Theoretical Engineers.

—The Legislators' Last Report.

Correspondence Deseret News.

There are three main systems in working stratified mines. The pillar and stall, square work and long wall all of which can be conducted in such fashions suited to the general state and condition of the measures. In opening mines the agent should make a careful examination of the seam, so far as it has been proved; the angle of inclination; the state of the overlying measures, and the methods that should be adopted to work the mine.

As aforesaid, the Alma coal is a very contractible measure, and requires great care and attention to keep it in good working order.

We have bats No. 1 and No. 4 shut down for fire, and No. 1 and No. 3 because they cost a little more a ton for working than the company cared to pay. As from all appearance it would seem that they will remain shut down for some time to come. No. 1 has to reopen on the south side of a light coal but we calculate that but No. 4, for fifteen No. 4 and its 3 in the most permanent way would cost about ten hundred thousand dollars at least.

From the large number of fires we have had in the coal measure of this valley, it seems to me as if the pillar and stall method, the principle upon which these mines are worked, is not suited to the conditions of the measures in this district. We cannot monitor that the system of working a mine is right where only one-third or one-half and in some cases only one-fifth of the coal is got from the openings of the mine. This fact in itself is sufficient to convince every intelligent person that there is something wrong in this manner. Under present existing circumstances the question is, What can be done to change this state of affairs? I answer, Work the mines on the square block principle, and clean out not only one-third or one-half, but the whole quantity of coal within the measures, by the square work system you can do this, but by the pillar and stall principle you cannot do it in this valley.

Objections to this method can and will most likely be made, on the ground that the company would have to long to wait for a return on the capital invested in the mine. I am aware, Mr. Editor, that this is a fashionable cry. The operating society of various firms to become millionaires is so prominent for speedy, safe working. That a fair return upon the capital invested in mines should be expected and obtained within a reasonable time, no person would question, but to expect the miner at every stroke of the pick to fall into cut lumps, is far too aerial a theory to be sustained. The writer is fully cognizant of the fact that office mine-engineers can do much with the pen and paper in the office, but to the mine, as a rule, they are at sea and the general tone is that their absence is worth more than their presence with the everlasting gong on their tips, "cut down the expense, cut down the expense." Ah, shall your destroy both life and property, and then so a reward consider the responsibility.

In opening a mine in this valley on the square block principle with good management and with the streams free from large faults, the production can, and ought to be, 300 tons per day—in twelve months from the start.

RED CANYON, Uinta Co., Wyo., January 15th, 1894.

LECTURE ON MAGNETISM.

Dr. Talmage Instructs a Studious and Select Audience on That Subject at the Church University.

The first lecture of a regular series by Dr. Talmage at the Church University on natural philosophy was delivered before a select and very studious audience last night beginning promptly at 7 o'clock. Magnetism was directly dealt with, the discovery of the property in glance of white of iron near Magnesia, an ancient city in Asia Minor, was referred to and its marvelous powers under certain conditions were clearly shown.

As magnetic metals, iron, nickel and cobalt were mentioned. As diamagnetic metals bismuth, antimony and zinc were named. The former class would attract and the latter would repel. There was an known neutral metal. One body charged with magnetism had the power to induce that condition in other bodies. It was a strange phenomena, however, that a magnetic body always induced a magnetism of an opposite character. Interesting experiments were also given of how one body strongly charged with magnetism could communicate the same power to another without coming in contact with the same. Its power to operate through wood, glass, leather and other substances were plainly shown.

The speaker said the difference between a magnet and a magnetic body was that the latter would attract indiscriminately while the former did but possess that power. Poles were explained to mean the points where magnetic forces centralize, or was also the fact that unlike poles always attract each other. This led to French physicists to speak of the earth's existence as the north and the south poles. On this question there was a great deal of speculation. Sir Edward Thompson offered to one as the plus and the other as the minus pole. That was to avoid apparent technical and really contradiction. But the subject preferred that neither of these be accepted by the class, and he advised that one be called the north seeking pole and that the other be spoken of as the south seeking pole.

The wonderful power of electro magnets was then shown by a number of experiments which amused and interested the audience immensely. In conclusion the speaker stated that it was not too much to claim that from magnetism had come more than the discoveries of lawful used in steam. It had proven itself one of the greatest agencies of man. It had made it possible for him to send messages from continent to continent and to traverse the trackless ocean with speed and safety by giving him the mariner's compass whereas such an undertaking in ancient times was uncertain and hazardous in the extreme.

The next lecture at the Church University will be given tomorrow night and the subject will be the Sun, Moon and Stars.

WORKINGMEN'S CLUB.

Such an Organization was Effected by by the Republicans Last Night.

—Mr. Pigman Rebuked.

A Republican Workingmen's club was organized in the Seventh hall in the Harmon block last night. The officers chosen were as follows:

President, Adam Peck; vice president, John G. Robinson; secretary John Jones; assistant secretary, William Dancy Jr.

The following gentlemen were named as an executive committee:

At Large—J. J. Thomas.
First Ward—A. L. Rambila.
Second Ward—George Green.
Third Ward—R. F. Jenkins.
Fourth Ward—A. B. Sibley.
Fifth Ward—J. D. Foster.
Sixth Ward—Ezra Hoyleman.
Seventh Ward—J. L. Frank.
Eighth Ward—C. J. Mitchell.
Ninth Ward—James Austin.
Tenth Ward—Sol Crown.
Eleventh Ward—W. A. Clovis.
Twelfth Ward—To be appointed later by the president.
Thirteenth Ward—A. S. Pott.
Fourteenth Ward—John Chalmers.
Fifteenth Ward—Richard Beynon.
Sixteenth Ward—Wm. Sagers.
Seventeenth Ward—J. J. Williams.
Eighteenth Ward—L. W. Pearson.
Nineteenth Ward—E. B. Treat.
Twentieth Ward—C. J. Higgin.
Twenty-first Ward—R. M. Pardier.
Twenty-second Ward—J. J. Spencer.
Twenty-third Ward—J. C. Sanders.
Center Ward—J. D. Wright.

A committee of twelve, two from each precinct of the city and two at large whose duty it shall be to confer with the city central committee, was then elected as follows:

First Precinct—H. G. Green and James Cracroft.
Second Precinct—Wm. Dancy Sr., and George Sandrin.
Third Precinct—J. L. Hoke and J. E. Malin.
Fourth Precinct—J. G. Robinson and E. J. Milnes.
Fifth Precinct—S. R. Weaver and R. F. Campbell.
At Large—Frank McDonald and Wm. H. Lewington.

After the transaction of some other business of a more unimportant character a resolution was unanimously passed condemning the Pigman Barber bill. The meeting then adjourned.

Basalt Items.

Special Correspondence of the News.

BASALT, Jan. 14, 1894.—During the past week the weather has been most delightful, owing to the absence of our Idaho friend, the wind blower, but today, Sunday, it has taken a great change, with a south blizzard, accompanied by snow and rain. Notwithstanding the storm the young ones came through it and our Sunday school and our Mutual were well attended.

Sister Sylvia Cuddle, a promising young lady of 18 years, is a victim of typhoid fever, but is in fair way of recovery. We trust her health will soon be restored as her services are most useful as a prompter in the Sunday school and a faithful member in the Y. L. M. I. A.

Mark Lobean is around again from some severe sickness of typhoid fever. A gentleman informs the writer that the son of one Mr. Marker, of Idaho Falls, is very sick and two doctors of that place attending him are perplexed to know what to prescribe for him as also concerning the cause and nature of the disease.

The folks here at Basalt and all over the valley have had a sore relapse from a week going and counting the days he is said to be traveling south for purchasers to lay up his last. Folks, keep your weather eye open and look out for squalls for men will get money of their cash.

The Union Pacific railroad officials mean business this year, as there are thousands of fine unloaded ties at Basalt, ready to be laid in the room of rotten ones—not before it is wanted, for the preservation of lives of those going on by that line. And the men who labor in that occupation in the heat of the burning sun are looking out for the wages they used to have, and that is two dollars per day on the track, and none the much pay for any laboring man, as an old saying, "Live and let live."

All the children of Mr. L. Frith are around from the measles and attending school next day. Two active boys at this place in the names of Charlie Crinkle and Willard Crofts, got up a dance for their companions the boys and girls, and a unique time was enjoyed by all. None of the other members were present to witness the dance and were much pleased with the young on's success. The dance so enjoyed the little girls that they intend to get up a dance for the boys to enjoy.

On Sunday evening, about 8 p.m., the store of Clark & Faustino at Idaho Falls was turned to the ground. The loss will be heavy.
