TERRITORIAL NEWS NOTES.

The Recent Land Craze in Southern Utah Culminating Seriously.

DAVIS COUNTY LAND JUMPERS.

The Alleged Racketer of Little Rebecca Walters of Willard Found Dead in a Slough.

The recent land craze in this end of Beaver county, has culminated in one instance at least of one man threatening another who by the way is his own brother, that he would have "his blood or his land," and after telling his brother to "feed himself," emphasizing it by coming up town and purchasing outfittings to go gunning. It seems that the oldest of the two brothers had located and, it is said, was living upon a land claim upon South creek, but somehow or other and failed to properly enter his land in the land office. In the meantime the younger brother had admitted and obtained permission to build a house and live upon an extreme portion of the claim, and it is said, commenced to also cultivate part of it. Thinking perhaps that the neglect of his elder brother would imperil his home and other improvements he made the movement legal entry in the U. S. Land office and subsequently informed his brother of that. The local declarations by the latter, that his claim had been unwarrantably jumped and that he would have his "blood or the land," has brought about a complaint to that effect before Justice of the Peace Emmett, but the officers have thus far been unable to locate their man, who now considers it wise to keep out of the way.—*Beaver Chronicle.*

ALLEGED LAND JUMPERS.

A report of sensational crimes from Davis county which may end in something thrilling.

It appears that E. E. Rich and Fred Walker, of Salt Lake, have taken possession of a portion of the public school land. They have had it fenced in, closing the public highway, and refuse to allow the oldest settlers to go in or out.

A number of armed men, acting for Rich & Walker, are guarding the premises. The survey to the lake was made thirty-four years since and has been traveled for the last twelve years.

The water of a spring along the highway which Mrs. Lund, a widow, has been using for thirty years is said to be dried up from the source to the land appropriated. The widow's son, Ras Lund, yesterday afternoon threw up a bank to force the water back on his mother's land, as matters were somewhat uncertain. William Spencer, Lund's brother-in-law, accompanied him with a shotgun. Foreman Dallmann, who represents the Salt Lake people, told his workmen to stop for awhile and he disappeared. On his return he had a shotgun and ordered his men to work again.

The Davis county court this week refused to give Rich & Walker the water right. The disorders in consequence are considerable talk in that section, and unless settled, serious trouble may result.—*Standard.*

A FIEND FOUND DEAD.

Edler is dead. The ravisher of little Rebecca Walters, of Willard, is no more.

**Last week the body of an unknown man was discovered in a slough south of the Hot Springs. No marks of violence were found on the corpse. The cause of death is yet a mystery. When the Ogden Standard received last week's *Bugler* containing an account of the Willard affair, they placed the coincidences together, inferring that the dead unknown was the much-sought Edler. A Standard reporter was dispatched to Willard and a comparison of obtained facts, found that their surmises were undoubtedly true. In age, height, weight, complexion and the loathsome disease, of which Edler talked freely while at Willard, the corpse tallied to a nicety with the description given of Edler. He must have repented of his inhuman crime, and spurred on by the tortures of disease, taken his own life.—*Brigham Bugler.*

SAM SMALL AGAIN.

Our Ogden friends have learned, and to their sorrow, that Sam Small is not the man they want at the head of their Methodist University. An evangelist galloping over the country preaching sensational sermons to curious, semi-moslem hearers is not the man for president of a great institution of learning. Sam Small, the evangelist, and Sam Small, the president, are two men. It is true and they are same man. No one man can be a sensational evangelist and a grave and dignified college president. In the role of the former Sammy is in his element, in the role of the latter Sammy is off his base. As a lover of notoriety it would appear that Sammy is a veritable success, and is winning it from his connection with the Ogden University.—*Salt Lake News.*

THE BEST CROP PROMISING.

Business seems to be livening up of late. Two new residences are underway, and several others are to be commenced shortly. Mechanics, artisans, farmers and laborers all seem to have plenty to do. This, of course, is a sign of prosperity; a broad smile is playing around the corner of the farmers' mouths on account of the late rains, which has been worth thousands of dollars to the growing crops. One of our prominent farmers was offered $15 per acre for his best crop before the rain, which he was inclined to accept, this was as they stood the purchaser offered them, of his inside, there and then; but after the rain, he told the would be buyer, that $25 would not buy the poorest acre of beets he had. This farmer has acres about fifteen acres, for the rain was worth $150 to him alone. As a rule, the rain saw to-day very well although there are places here and there that have missed, and many places where it was thought would have to be replanted, you can see them coming through the grass when the rain. All the farmers with whom it is the best and eager to farm.—*Lehi Dispatch.*

Bucklen's Arnica Salve.

The Best Salve in the world for Cuts, Bruises, Sores, Ulcers, Salt Rheum, Fever Sores, Tetter, Chapped Hands, Chilblains, Corns, and all Skin Eruptions, and positively cures Piles, or no pay required. It is guaranteed to give perfect satisfaction, or money refunded. Price 25 cents per box. For sale by A. C. Smith & Co.

MANUFACTURE OF MIRRORS.

A Trade That Has Many Closely Guarded Secret Processes Unprotected.

Probably few of those who find the silver so essential an article in the home know that its manufacture is one of the most closely guarded secrets in the industrial world. It is asserted on high authority that, simple as would seem the few processes required, even those who have worked for years on one portion of the production know nothing of the other branches. There are but few manufactories in the country, in fact, in all the great manufacturing region lying between New York and Chicago but use first produces plateglass mirrors.

So close is the secret of fine mirror making kept, it is said, that many of the most valuable processes are not even covered by patent, the procuring of which would be attended with more or less publicity, even in those cases where patent might legally be claimed, and the knowledge lives close locked in the breasts of but very few people in the whole country.

The plate glass which is used for mirrors must of course be of the choicest description, as the slightest flaw would be fatal. It is taken in the unfinished form to the factory, where it is cut, beveled, polished and silvered. The time required in the manufacture has been greatly shortened by the recent developments of the art of working, so that what only a few years ago required nearly a month in the accomplishment may now be completed within a single day.

The bevels are cut first by the action of sand and water, followed by the emery wheel, which is the last stage open to public inspection till the polishing, through several additional processes, has been completed. But it is in the silvering that the most delicate and important steps are taken, as the most carefully prepared glass is valueless if the silvering be anywhere defective. Formerly the back of the glass was coated with mercury or quicksilver, from which the name of the process was derived, but the name is now even more true, since the backs of fine mirrors are generally coated with sheets of pure silver—or it would be more proper to say that they are backed with a plate of silver. This is a great improvement in many ways, to say nothing of the economy in the use of quicksilver.

Not a few good housewives will recall how provoking it has been to find that a patch of the coating had peeled from the mirror in the "spare room," the has not being discovered till a valued and perhaps slightly critical guest was expected as an occupant for that very room, and when there was no time, and perhaps not the means, to replace the now worthless looking glass. This cannot happen, of course, when the backing is a solid sheet of metal. Another advantage is in the greater reflective powers of the pure silver as now prepared. Formerly a reflection of two-thirds the light received was a very flattering result, and as low as 60 per cent. was satisfactory; now at least 85 per cent. of the light is reflected from first class glasses.—Newton Norton in Good Housekeeping.

While the Electric Lights Were Out.

A story comes to me from Athens which is almost too good to be true, but quite too good to be withheld. The privy council had a meeting in the room set apart for them in the glaring, white stucoed palace. It was evening, and the president had just risen to address his colleagues, laying, according to custom, his gold watch on the table in front of him, so that he might mark time. Suddenly the electric light went out, but after a short interval returned. Then the president discovered that his watch, which was a present from his royal master, was missing. He lamented, and invited his colleagues to replace the watch, but there was no response.

He reminded them that the door was locked and that the watch must be in the possession of one of them. He next put each member on his word of honor to say that he had not it, which little performance was promptly got through. The president then remarked that the situation had become embarrassing; but as he wished to make things easy for the culprit, who had doubtless yielded to temptation in a moment of weakness, he would order the lights to be again extinguished in order to give him an opportunity of restitution.

This was done, and when the lights were turned on the president found that not only had he his watch, but that he had also lost his silver inkstand!—Vanity Fair.

A new pianoforte keyboard, having six rows of keys, has recently been invented in Manchester, England. An octave is formed by six keys in two sections lower. All the keys are on the same level, and each note is separated from the next by an interval of two semitones.

Experiments with Corn.

From the Purdue university station, Lafayette, Ind., comes a statement concerning experiments with thirty varieties of corn. From this report it appears that: 1. The later varieties generally produced a greater aggregate yield of grain and stalk. 2. The earlier maturing varieties generally produced a larger proportion of ears and a smaller proportion of pure corn. 3. The drought hastened maturity and reduced the proportion of grain, especially of the later varieties, whose stalks were beginning to form when the drought was most severe. 4. The large per cent. of suckers and minor varieties is definite relation to time of maturing.

Professor Latta holds that the prevalent idiotic and expensive plan of treating the ears and wasting or only half utilizing the stalk must give place to more economical methods of husbandry and utilizing the corn crop. Instead of repeating and exhausting the grain and straw, as is now commonly done, superior fodders generally will grow varieties that in point of earliness, yield and proportion of grain and stalk are suited to their needs, and they will feed our stalk and grain together, as silo men almost universally now do at the present day.

It Will Be the Deepest Hole in the World.

One of the most important scientific explorations into the depths of the earth ever undertaken will be carried out near Wheeling under the joint auspices of the United States government and the city of Wheeling.

Some months ago the Wheeling Development company began drilling a well in search of oil or gas. It was determined to bore as far as possible. The hole has already reached the depth of 4,700 feet, within 500 feet of the deepest well in the world. In this distance a dozen of thick veins of coal have been passed, oil and gas both struck, but not in paying quantities, and gold quartz, iron and many other minerals found. The hole is eight inches in diameter and the largest in diameter of any deep well in the world.

Professor White, state geologist, has arrived from Washington, where he succeeded in getting the government geological survey officers interested in the exploration, and the result is that the hole will be drilled to a depth of one mile. Then the government will take up the work under the direction of two expert officers of the geological survey and drill into the earth as far as human skill can penetrate.

The idea is to take the temperature and magnetic conditions as far as possible, and by means of an instrument constructed for the purpose a complete record of the progress and all discoveries made will be kept.—Cor. Philadelphia Press.

Quick Work by an Old Time Clipper.

The old tea clipper Oberon blew in from Yokohama after the fastest passage on record, being out but twenty-four days, which is phenomenal to steamship time. The Oberon is a teakwood vessel, built years ago for the tea trade. Captain Fulton reports head winds for the first twelve days after leaving Yokohama. Then they struck a favoring breeze, and the old clipper reeled off 315 miles in the first twenty-four hours, following this up with a 300 mile run the next day, and from that time until she sailed into the Columbia she has been making from twelve to fourteen miles per hour night and day.

The vessel is a homely looking old craft, but it is doubtful if her performance will soon be equaled.—Astoria Cor. Portland Oregonian.

Horse Radish for the Grip.

A week or two ago a lady of this city wrote a note to The Tribune commending the use of horse radish as a means of alleviating the grip, if not affecting a thorough cure. Several instances in which this suggestion was acted upon with strikingly favorable results have come to the knowledge of The Tribune. Ordinary grated horse radish, eaten at frequent intervals during the day and in connection with food at the table, if food is eaten at all, has been found remarkably effective in holding the distressing cough that frequently lingers after all the other symptoms of the grip have gone. It can do no harm to try it at all events. The humble but pungent horse radish must have been made for some good use.—Chicago Tribune.

Here and There.

The prices gained by high grade or pure breed horses in Chicago, compared with the prices for scrubs, are decidedly encouraging to breeders and growers of the former.

Indiana has a new road law which forbids hauling more than a ton on narrow tired wagons or more than 2,500 pounds on broad tired ones while the roads are soft, under a penalty of from five to fifty dollars.

Judging from the varying opinions expressed about scheming cattle, it would appear that the first thing to be done is to settle whether or not the practice is really to the advantage of the cattle, and whether the operation is cruel.

The California Fruit Grower says that sorrel can be eradicated by an application of twenty-five pounds of slaked lime to the square rod, applied broadcast. Digging and cultivating seems only to spread and encourage the pest to make renewed efforts.

J. A. Woodward asks in The Rural New Yorker: "Is it not a good idea for all the potato growers of a community to grow one sort, so that a carload, or half a dozen of them, may be sent at any time to fill any order? A dozen carloads of any good sort may be sold more quickly and easily than one load of a dozen sorts."

Napoleon VI.

Prince Victor Napoleon, eldest son of the late Prince Napoleon, has been already dubbed by his partisans Napoleon VI, his father being considered as Napoleon V, the poor young Prince Imperial having been styled Napoleon IV. He will be thirty years of age next July. He is a fine looking man, with something of the grandiose cast of features of the great emperor, though resembling far less the Napoleon of Sedan than did his father. He is by no means a promising pretender, having inherited the vices of the late prince without his active and powerful intellect.

Covering Bee Hives with Cloth.

Some styles of bee hives are so large that the sections must be made of more than one piece. To prevent leakage they have been covered with tin. This is expensive, and some beekeepers have been trying heavy cotton cloth instead of tin. A piece is first painted, then the cloth laid on and another coat of paint put on over the cloth, explains The Beekeepers' Review.

Williams' Anti-Pain Pills.

If you are Yellow, Bilious, constipated with Headache, bad breath, dizzy, no appetite, sick and your Liver is out of order. One box of these Pills will drive all the trouble away and make a new being of you. Price 25 cents. Elias Comp. Mar. Inst. Drug Dept., Agent. 5 4s

Scrofula

Is the most ancient and most general of all diseases. Scarcely a family is entirely free from it, while thousands everywhere are its suffering victims. Hood's Sarsaparilla has had remarkable success in curing every form of scrofula. The most severe and painful running sores, swellings on the neck, or goitre, tumor in the eyes, causing partial or total blindness, have yielded to the powerful effects of this medicine. It thoroughly removes every trace of impurity from the blood and builds up the weakened system.

The Worst Type.

"My son was afflicted with the worst type of scrofula, and as his recommendation of my Sarsaparilla I gave him Hood's Sarsaparilla. Today he is sound and well, unhesitatingly do it we said that we not enough believe in Illinois to effect a cure." J. CHRISTIAN, Ellwoods, Ill.

Scrofula

It more especially than any other afflicting disease, and for this reason many, Attribute from impure and vitiated blood, the disease locates itself in the lymphatics, which are composed of white tissue. Here is a period of fatal life when the whole body seems to be composed of white tissue, and therefore the unhappy child is especially susceptible to this dreadful disease. But there is a potent remedy for scrofula, whether hereditary or acquired. It is Hood's Sarsaparilla, which expels every trace of the disease and gives to the blood the quality and color of health. Get Hood's.

Hood's Sarsaparilla

"When my boy was two years old he was attacked and suffered a long time with scrofula. The physician at length told us to give him Hood's Sarsaparilla, which we did. Two bottles cured him. He is now 10 years old and has not had any sign of scrofula since. We recommend Hood's Sarsaparilla to all our friends." Mrs. R. C. CLIFTON, 8 Kinsman St., Cleveland, O.

Hood's Sarsaparilla

Sold by all druggists. $1; six for $5. Prepared only by C. I. HOOD & CO., Apothecaries, Lowell, Mass.
