AGRICULTURAL EXHIBITION.

What Utah Will Show in This Line at the World's Fair.

To the Citizens of Utah:

By request at the Utah World's Fair commission I shall collect the agricultural exhibit for the territory. The interest of no State or Territory will be so well served by a good exhibit as that of Utah, and every citizen should feel a personal interest in making the exhibit of Utah's resources and industries complete.

I solicit the advice and assistance of any citizen who can aid in securing rare specimens, or in securing material along the following lines that we will represent in the division of agriculture.

This department will collect and represent the agricultural fertilizers, such as gypsum, nitrate of soda, and any other material suitable for plant food, together with river waters and analyses of the same.

It will exhibit its irrigation system by photographs, drawings and otherwise, including dams, reservoirs, canal scenes and irrigation scenes.

It will collect the typical soils of the Territory and show them in a column as they stand in the soil.

It will collect the farm machinery, models of farm machinery, and early appliances of either; the farm or the household that have been invented or made in the Territory. I particularly desire that the early farm appliances and models of new inventions may be gathered.

A large painting showing the unique village farm system of Utah with surrounding country, will be exhibited, together with views of some of the farm homes and farm methods of Utah, by means of paintings and drawings, or photographs.

Probably no other stock will be shown but sheep, yet photographs of some of our best animals will be gathered.

The fibres, both animal and vegetable, will be collected; viz.: wool of sheep and goats, with their skins, and cotton and vegetable fibres.

All classes of crops, with their products, will be shown, and in the flora of the Territory will be included the weeds and a collection of our most distinctive flowering plants. It is desired that the farmers having specially fine samples of any economic plant growing in Utah will notify me of the same, and, on request, forward the samples. Our principal root crops will be surveyed in jars for preservation.

A case of rare birds, and probably a few of our four-footed wild beasts, may be shown, such as the Rocky Mountain sheep and Rocky Mountain goat, perhaps a buffalo. I would be pleased to secure a Rocky Mountain sheep and Rocky Mountain goat, as they belong to classes of domesticated animals.

A display of the Agricultural College and its technical features will be made.

Maps showing the agricultural resources of the Territory will be shown.

Our dairy produce will be exhibited.

A complete exhibit of horticultural products will be made in a preserving liquid. This exhibit we wish to make inclusive, to take in all kinds of our fruits, from the figs of southern Utah through the entire list of fruits grown from southern to northern Utah. Probably the fresh fruits in their season will also be exhibited.

Samples of the soils of the Territory will be collected.

The exhibit will be accompanied by printed statements and maps giving information in regard to each part of the display, much of which will be accompanied by analyses of the products shown.

If any citizen can suggest any desirable feature to be added, of any other article or product to be exhibited, or can render assistance as to the method of exhibit, or the collection of materials, or in any other direction, I shall be glad to hear from him, in most that advice and assistance will be freely rendered. Address

J. W. SANBORN,
Agricultural College, Logan, Utah.

FIRST AND ONLY MEN.

EXTRAORDINARY INSTANCES OF PRIORITY IN INVENTION AND ACTION.

Every age and generation since man began to live on the earth has produced one or more record breakers. The first person to do a thing, from that very fact becomes a notoriety to individual and sets up a standard by which the achievements of all his successors may be measured. He may be again remain by reason of his propriety the most distinguished performer of that particular action of achievement. History is full of these pioneers in human effort; their names have become household words. Every school boy is taught that Aeronautics discovered the lever, Gutenberg was the first printer, Cadmus the first inventor of written characters, Fulton the first to apply steam to locomotion on water, Watts the originator of steam as an agent in locomotion by land, Montgolfier the first aeronaut—at least the first well authenticated navigator of the air. Morse the first telegrapher. And the list is a much longer one. The probabilities are that the majority of these record makers in human history were not conscious by their neighbors and friends or by their contemporaries of any actions on their part of so who had performed anything particularly wonderful or worthy of human gratitude or remembrance. In the same way the "first" may be to-day in many instances and in some localities at least, be living and telling without raising a ripple on the human current to the publicity which would discover the name and fame of many who would even now, were they known, be entered record breakers in the last decade of the nineteenth century.

As Adam was the first man all sorts of memorious hypotheses have ascribed to him the first performance of many interesting and, perhaps, highly imaginative deeds.

Seleph Arkwright, one of the new friends at the warrior of modern Rome, a general, a whole and a statesman besides, is said to have been the

FIRST CLEAN-SHAVEN MORAN.

No wonder he was popular with all young men; were there no other reason he is the name would no doubt figure in history. For to the days a the early Roman civilization the hair was a badge, if not exactly of servitude, at least of something approaching bondage. Just as the attendants to the best accoutered places of public resort today are required to wear clean shaven faces so the slaves in the days of Ralph were accoutered to wear beards and it has within a short time become in that extent a mark of degradation.

THE FIRST MAN TO MAKE SHOT

was named Wells, though there is no evidence that he was in any way related to the inventor of the celebrated gun. The curious part of the story is the discovery of the method now in use of making perfectly globular missiles of lead in that one evening, after having spent several hours at a social gathering where his companions, at least, drank too much wine, he managed to find his way home and immediately fell into a deep sleep. In the course of which he dreamed that he was again out in the street with his late companions and that it was raining, not rain, drops, but spheres of molten lead. In the morning he began to wonder what shape molten lead would take if dropped through the air and he hastily climbed to the top of the steeple of the church of St. Mary at Redcliff, Bristol, and had a kettle of lead and threw it to the great be low. When he came down and gathered the particles from the bottom of the cask, some were quite shallow, he found that his dream had come true. And hence the shot-tower.

THE FIRST AUTHOR TO BE UNKNOWN.

The first professional author to receive what is generally styled the honor of knighthood was Ancestus Harlin, not only so some, are the memory of the Henry Lane dwarfs in London and often spoken of as "Augustus Dinrlinstein." Queen Victoria conferred his title upon him in the summer of 1881.

The first sea captain to take a whaleback steamer across the ocean from Duluth through the Soo to Sarnia was Charles W. Saunders, the well known Great Lakes captain and his vessel was the Charles W. Wetmore. Capt. Saunders made his first voyage in 1861 and since then has died on his ship in Liverpool from heart disease, supposed to have been aggravated by his bodily rescue of a cask way the day before.

The first English owner of racehorses to make entries for American races and to already to participate in what is the most widely patronized sport in this country is Col. North, the "nitrate king" of England. He has entered some of his most famous thoroughbreds for the American derby, the Queen Isabella and the Sheridan stakes in Chicago in 1893.

THE FIRST PANSIES DUG

was a doctor of medicine in Tuscany, who put three golden pills about his throat for a year of arms. This was something over 500 years ago. His descendants called themselves Medici, which means the descendants of the doctor.

The first discoveries of America are supposed to have been Buddhist monks from China, who landed on the west coast in the summer of 458 A.D.

Lieutenant Meigs, U. S. A., son of General Meigs, is declared to have first used the armored railway car in warfare, in 1863 on the B. & O. railroad.

Walter Abbott Wood, of Hoosick Falls, N. Y., made in 1862 the first reap and string self-binding harvesting machine.

William Ramsey invented the sidewheel boat. A "side-wheel free-boat" built by him attracted a great deal of attention at Fort Pitt (Pittsburg) in 1791. There were treadels for the feet.

In 1850 Mendenhall's Liberty Bell made the first protest against negro slavery.

Col. Edmund Dick Taylor, a cousin of Zachary Taylor, was spoken of by Abraham Lincoln as the "Father of the Greenback."

James Lorrie, a Scotchman, set up the first Brussels carpet loom in the United States.

HINTS FOR SHEEP BREEDERS.

Food and Treatment That Will Bring in the Greatest Returns.

Old, experienced flockmasters are usually guided by certain golden maxims, one being that variety in the feeding of sheep is undoubtedly healthy. Many of our most successful sheep raisers are those who adopt the largest series of fodder crops, not because success rests on kind to answer when another fails, but owing to sheep having their likes and dislikes no less than human beings.

Instead of depending wholly on hay, turnip or other, as some do, the capacious and experienced flockmasters add to that cabbage, kohl-rabi, thousand headed kale, rape, vetches or whatever is suited to the climate and location. There are many sheep growing districts in America where one and all of these fodder plants can be grown to the greatest advantage, but farmers show in having the old rule. Rape can be cultivated almost anywhere, and I wonder flockmasters can resist the temptation of giving it a trial.

Hurry up, shepherds, and buy rape seed in the fall, and, ye lads for those charming Downs that you are importing and breeding so much money on. Your stubbles will soon be hazy, so to with the plows and on with the seed drill, and you will see a change come through your sheep that you never dreamed of. The sheep and lambs I kept per acre on rape in Oregon seem sometimes to be incredible. What was the sheep grazed, and what did they were to be found in the form of folds?

Crow folding is now very commonly practiced among the leading Dishmen in Britain. The advantages of crow folding are those which are generally practiced on very great. It is most remarkably practiced in those districts where Down sheep are kept, and where the arable land is adapted to the growth of fodder crops, such as turnips, rape, rye-cake, winter barley, vetches, etc. Crow those instead of folding, or allowing the ground to be bare. Immediately after the crop is carted plow into land and sow one or all of these seeds and you will not only have abundant food for all varieties of stock as well as for sheep, but you will at the same time be greatly enriching your land. The course is certainly followed not in England, why not in America?

Change of food is one of the great secrets of successful sheep feeding. When in Britain I had full observed that among the celebrated breeds of sheep were being constantly almost daily, moved from pasture to pasture, always getting fresh keep and never allowed to remain in one inclosure till they had to be removed, which is the sound of all management. Others, again, were allowed only as much space on grass or rape, etc., as they could eat off clean, never grow a fresh patch daily, simply by shearing the hurdles or wire netting. In this manner the land folded from is manured and nothing wasted. Wherever this present is carried out at least one change is made in the sheep pastures every day by taking them from fresh primary portions to rape or rye-cake. Again, abundant food is the permanent pasture for the night.

We all know that careful shepherding, plenty of change, liberal allowance of concentrated foods and a good feed in pasture, are the chief points required in order to secure success. I am a great advocate for feeding young sheep on concentrated foods. When shepherds with good percentage of all are used in conjunction with some kind of food there is much left for profit to the farmer's feed and after the improvement of the land upon which the cake and rape is consumed. So important is the subject of improvement of land by means of sheep feeding that it occupies a very prominent place in sheep management.

You must feed your sheep from the day the lambs are drop to take and rem, and it must be a good feed, and the sooner that makes them. The old theory that pitiful mutton can only be had from fatted a year old wethers has been exploded. Indeed Southdowns are now becoming rare. Nothing is more certain than that the age at which sheep are to be fattened is being constantly lessened. It is thoroughly ascertained that a sheep from its birth till 1 year old, if well fed, will make as good mutton as any sheep, provided the sheep be fed carefully, plentifully and methodically, and that there shall be no short cuts, no ups and downs.

Economy of food is seen as well as the high requires to have abundant food and fresh pastures all through the nursing season. The maternal strains are very heavy, especially where the one is suckling double. The drain of a healthy and highly growing lamb upon the ewe is so great that in many cases it entirely checks the growth of the wool.—William Watson in Breeder's Gazette.

Live Stock Points.

Common horses will become more and more a drug on the market as fast as the cities begin to use electricity and other motive power in place of horses for street cars. This they are doing rapidly. Within a few months 1,000 horses will be for sale from the street car stables of New York city alone.

Mr. Bode, American minister to Persia, has secured some specimens of dogs sent at Washington sixteen valuable Astrakhan sheep. It will be worth while to see how they thrive in this country. Perhaps we may at length get the world in the production of fine wool.

The poultry and dairy shows that have been held in connection with the fat stock and horse shows at Chicago will be omitted this year. There will be a Dairy show, and a great one, in every state in the Union each year.

Be sure and have green stuff for the poultry all the summer through, if you have them yarded. Either rye, oats or grass will make a good feed, and careful poultrymen will plant one or all of these to glean in early season to come in at the right time.

Laborers in Alaska.

The workingman need not complain in Alaska. Wages are dollars a day, with board and lodging provided by his employers, are miner's wages. Indian workmen in the mines receive two dollars a day and "find" themselves. The cost of provisions adds a dollar a day for each white employee to the expenses of the mining company, and with these items in the operating expenses, any fractions of dividends sufficiently prove the richness of the mines. Hydraulic mining begins in May and lasts until October, and unless they are situated in moonlighted canyons, difficult of access, the quartz mills run all the year round. The Treadwell and Treadwell mill on Douglas island thrashes night and day, winter and summer, grinding out in twelve months $700,000—sufficient answer to all that has been said against Alaska's being or becoming a great mining country.—Harper's Weekly.

Wages of New York Waiters.

Eighteen or twenty years ago waiters in down town luncheon houses were paid sixteen dollars a week. Now the receipts are no less, but the wages paid by the proprietors are only four or five dollars a week. The public makes up the difference.

This illustrates the growth of the tipping system. When sixteen dollars was the waiters' wage there were no tips. In those days when you ate luncheon you paid for it. Now you pay the waiter as much as you pay the bill. It is an old fact that while the prices on the bills of fare have not materially decreased and the restaurant keeper has been relieved by his customers of a large item in his expenses, the business is no more profitable than it used to be, probably because of the increase of rents.—New York Herald.

America's Largest Snake.

The largest American serpent is the anaconda which may attain a length of thirty feet. It inhabits tropical America, and is the most dangerous animal with dark round spots scattered over its whole body on a groundwork of rich brown. It is very fond of water and haunts the banks of rivers, lakes and streams, there lying in wait for any deer or cattle which may come to the margin of the water to drink.—Quarrelsy Review.

Delicate Compliments.

Charlie—I pity you, Jack, when I see your mother-in-law visiting you. That is a double I to you.

Jack—No. You probably never had any credit at all.—Kate Field's Washington.

Newark, N. J., has a loan and building association composed entirely of colored people. The whole income of the loan and building association in New Jersey amounts to considerably less than ½ of 1 per cent.

NOTICE.

NOTICE IS HEREBY GIVEN THAT THE regular annual meeting of the stockholders of the Bank State of Utah, of Salt Lake City, will be held at the bank, corner of West and South Temple streets in that city, on Tuesday, July 12, 1892, at 10 o'clock a. m., for the purpose of electing trustees to serve for the ensuing year, and for such other business as may properly come before the meeting.

HERMAN G. PARK, Cashier.

NOTICE.
