MEETING OF CITY TEACHERS.

Professor Maxwell Speaks to Pedagogues on the Education of the Child.

A Lecture that Was Full of Interest and Information—Parental Attention and Sympathy Essential Factors.

The principle theme of discussion at today's meeting of the teachers of the city schools was that furnished in a lecture by Prof. Maxwell.

Professor Maxwell spoke on the education of the child. His address was characterized by deep thought, charming eloquence and facility of language, and was followed by much profit and enjoyment by those present. The professor began his lecture by laying down the principle that the education of the individual was as the broadest condition to progress in the part of the race, and that it was the aim of the highest duties incumbent on a community to see to it that the opportunity of a higher life and a higher school be placed within the reach of all.

Nature had no laws which were inelastic and in accordance with which it was necessary to proceed if a positive advance was to be made in a direction not merely of the discovery of the hidden mysteries of the universe, but toward the application of the right made in the great task of elevating humanity. The great natural phenomena, by which the universe was made, teach for what had been already accomplished, and largely with the aid of their forces, the great work of man had been accepted the work of civilization, whether in the great movements or in the minutiæ of life, and it was upon the principle of the law of nature that their duty lay with even higher motives than those that compel the activities of almost any other force in men and women. It was there as evidence by working on metals and material objects, so also in the work of the education of the human mind. Education was not a matter merely of the head but of the heart, and it was the duty of those who spoke with just contempt of the ignorant grossly who in the past had formed their efforts to searching for the light and life by imparting the mere details of knowledge in a form somewhat more of charm and of force. Something more than instruction in dry and minutely exact formulas was necessary not only for the higher development of the intellect but also in order that the highest plane of sight be reached, the plane upon which the soul itself could which was the noblest part of every individual.

The same proper training and instruction for the soul was applied, our efforts would be in vain. There is a necessity to make a careful study of the nature of the child, not only individually, but in the case of the race in the past. Wordsworth had declared it as his, the truth of which is apparent to all, that the child is father of the man. If we wished to see the young mind in our families and school houses we should be careful students as well and consider that our duties began at a very early stage in their lives. We should be furthermore training the rising work or elevating the future men and women of the race at that period when they are most susceptible to the influences around them. With that object in view we should try to promote the harmonious development of the various faculties and powers of the child. If the great cathedral in all its strength and infinite and beauty was thought to merit a lasting memorial of the genius of its architect, the men of symmetry had in the human form, the body of it were to grow up in health and strength and beauty, required to be symmetrical and the same was and of the mind, an instrument infinitely more complicated. The body and mind which had reached a certain stage of development and force the most careful attention had to be paid to each if we were to be rewarded for our labors by the attainment in the child of a sound mind in a sound body.

The speaker then gave a definition of what he considered true education to be. He said: "To discover with an eye whose powers are impaired or lost what there is of subject and test, what there is of truly genuine and golden in the nature of the child, to read into its very soul and then with heartfelt sympathy and kindly effort, to promote the harmonious expansion and the full development of its best instincts while at the same time endeavoring to eradicate everything that is evil, that is this is education in the highest sense of the word."

He next proceeded to the consideration of the great principles that underlay education. He said that the parable of the husbandman, the seed being cast on sand, quickly fell into ruin when the winds came and the rain fell, while those others fell into the ground on the solid rock, resulted the efforts of the neighbor company to do. One it, conversed a very important and moral, particularly applicable to the work of education which was concerned with the upbuilding of a man character. The great truth, by upon which all the others depended for their support was the truth of the father of intelligence. He defined intellect as "the faculty which enables us to discern with the eye of the mind, material realities, the faculty in virtue of which the soul is beautiful, fare to face with the real, the material, the ideal. The great object of human existence, he declared to be the knowledge and acquisition of truth, the great and appointed function.

The great problem to be solved in connection with the work of education he said further, was the real power of the government and growth of the intellect. In discussing the question of searching more than any knowledge however wide, or lofty, it involved much more than mere instruction, however able and gifted the instructor. Education was not something given that it was possible to attain a high degree of manhood without the advantages of the school, he was convinced even imagine that an overt from nature.

The doctor next compared man to a living plant, and pointed out that it attained who had apparently indeed to be the foundation upon which the whole life was erected. He said that produced the sunshine of a fine evening more than a merely vegetable existence as a consequence of which trees more truly represented the life of man. Like the tall oak which overtops all the lesser trees of the forest and which pushes deep into the ground its vigorous roots, so man, at the upper end of the great family of life, the great universal tripod to which all one man appendages. As the tree if not firmly rooted in the soil with its widely spreading branches would become a prey to every tempest, the first storm, so, he asked, that would become of man, if he was not rooted with strong holdfast in the soil of his faith. Yes, if his life was not firmly fixed in certainty and established in virtue.

He next proceeded to the importance of purity, without which there could be no beauty nor anything strong or admirable. Purity was the foundation of life was sacrificed purity, without which the work of education would be as fruitless.

He next dealt with the evils that threatened the purity and the proper means of escaping them. The duty of employers in this matter and should be the object of the greatest attention in order to prevent the temptation of hopelessness or scarcity. The professor next drew a delightful picture of the period in the life of man when innocence with all its charms but the more irresistible attracts as the further we are separated from that elysian stage of existence by the primal sin of the race. He said: "Nature (to borrow a) opens her mere gorgeous pageant before our eyes, the lake as it mirrors the azure in its calm pure depths, the lark as it soars in ecstatic delight into the sunny brightness, are the real whose events of nature and whose influence is so sacred that we find themselves in the immortal spring time, and the immortal goddess of the earth and of the infinite has its resplendent waters as the fountain of eternal life, nothing is more apparent and appeals with the force of true intuitive sense wherever the beauty of man appears as in his innocence, like a rose in the bud in an obscure purity, spotless of highest human purity.

He added, however, that one element was yet lacking in the beauty of the child, the experience of conflict from which it was exempt, and which was the inspiration that assisted him. The sinner then was rendered the child of God and heir of heaven.

In spite of the various obstacles and difficulties being in which the child was placed, he said, he had great confidence in the end of parental attention and sympathy. He was a child himself, and he was sure that when the child is brought face to face with the new and natural, which he is surrounded with all the lovers of the universe.

The lecture next proceeded to speak of the "Culture of the Child." He said the greatest danger and care called for the importance of attention to every means possible to the expansion of the mind and to the right of triumphant from the conflict with evil.

Speaking of the duties of parents with regard to education, he said:

"Note as well as a mother could have the care of the child, the right kind of their children and demand their gradually and progressively the principle of the law of nature, that the child was one to be cared and what the son is to the man; no bad power to open to the child, no bad power to close to the child; no bad power to open to the child, no bad power to close to the child. The father by the power of authority, the mother by the power of sympathy, the child by the power of consent to possess the highest interests of the child. It was the great mission of the mother and of sympathy to add to education to knowledge, love for the lessons which are taught."

In conclusion the speaker said, "If you are able to shine everywhere and always in your place what is great in the world, what is great in the world and anything but what is great, and if you succeed in inspiring with a natural and spontaneous enthusiasm for the great and noble in your surroundings and examples, exceeding great will be your reward. Be sure that the great and what is noble will have a better representation on every vacant of their faces. Be sure that the great and noble will stamp themselves upon the minds and souls, whilst you will be more the saint delighted of heaven, and the angels, whilst your children and children's children, yea, even many mothers we will worship in the far distance of the past."

BUILDING OF THE SALT PALACE.

Another Meeting Held and Plans Discussed—Committee Appointed.

Another meeting of the promoters of the beautiful salt palace proposed to be erected in this city was held in the Municipal hall yesterday afternoon as foreshadowed in last evening's News. Those who were present were Messrs. A. W. McCune, D. E. Butler, N. W. Clayton, R. W. Sleigh, F. A. Dryden, L. W. Dinwoodey, L. L. Terry, N. A. Kimball, E. W. Beatie, Geo. W. Heath, Architect Kleinsig, Messrs. Mueller, Fisher and Barnes.

Mr. Sleigh was chosen chairman and Mr. Heath, secretary. The time of the meeting was taken up in the discussion of the best way to raise the money for erection of the building. Col. Clayton, Mr. Kleinsig and Mr. Sleigh being the principal speakers. The strength and probable utility of the different kinds of salt were dwelt upon at considerable length on motion, the chair named a committee consisting of Messrs. Clayton, Fisher and Barnes, to wait on the Kimballs to investigate the matter and report recommendations to a future meeting of those present. The time and place for holding this meeting has not yet been decided upon, but will be announced in the Deseret News and in the advertisement of the meeting proper the committee met and decided to have a crowd. Mr. Sleigh said he had spoken to Colonel Carlton and Architect Kleinsig. The committee will proceed at once to prepare the data to present upon then, and when that has been done the chairman will select all the members together who attended yesterday's meeting.

Child Burned to Death.

Last Sunday about 4 on a number of little children were running around a deserted camp fire at Cedarton when the clothing of little Nora Brown caught three years of age, caught on fire and were entirely consumed by the flames, the child dying in the morning. Mrs. Brown, who was in the house at the time, heard the screams of the child, by the time she got to the door the child was in flames. She ran to her assistance and succeeded in extinguishing the flames by rolling her in her shawl, and when she found her efforts were of no avail she ran to the nearest house, two hundred yards, to Mr. Brown's residence. His uncle were actually engaged in the work of building a new house when the screams attracted the house was one mile between of the office by the little people, they hurried to the scene of the accident, the sufferings of the little girl but she died in about three hours. Mrs. Little, Mrs. Brown's sister, who lives in Ogden, nearly burnt broken one to and which and her the sympathy of the whole community in her bereavement.—Bingham City News.

Young McCurdie Mining.

Young Alvin McCurdie when visiting a week at Alberta at his home on Wednesday afternoon, and did not long stay in the city. He said that he had heard of claim that the Wednesday a number of men were not working, the mountains and continue to the last week. He said that the work of sinking the hole had been found of no account. He said he heard that some workers had found the claim and had commenced to work very serious about him. The hour of 3 was made in about 14 years of age, and he had decided to be absent from home. He said that he had decided to be absent from home. Any information that will lead to the discovery of the lost boy will be duly rewarded by his father, J. M. McCurdie of this city.—Provo Times.

Lewis' 98 % Lye.
POWDERED AND GRANULATED.
The strongest and purest made, and the only one that will make a hard soap in cold water. Recommended for softening water, washing bottles, removing paint, cleaning sinks, drains, closets, etc. Universally recognized as the best for carbolic soap, disinfecting purposes, etc.

Treatment of Eyes.

Hundreds of people are today taking "treatment" from high-priced oculists. Often there is nothing in the world the matter with their eyes but an optical defect. NOT PROPERLY CORRECTED.

If you have "money to burn," take the treatment, but if you have not, if you haven't, be sure your glasses are RIGHT. I take to all people whose present glasses are not RIGHT. I have relieved many nervous troubles by giving the RIGHT glasses where others have failed. Eyes examined free of charge. All lenses ground on the premises and guaranteed of the best quality.
