

building agencies, other fissure sys-tems were opened, deep-seated in their origin and admitting the ore-bearing solutions, by means of which the limestone was caten away in certain spec-ially favorable localities, perhaps es-pecially deposited in its place. I think this action was largely metasomatic in its character—that is, it was a process of replacement or substitution of quartz and metallic minerals for the limestone -little by little, and not that large caves or openings were first eaten out to be afterwards filled by deposition of minerals in mass.

He thought that the cave like open-ings with horizontal bedded filling found in some of the workings was the work of secondary action, which he exed as the oxidation of the original sulphide ores, which was common to the Tintle mining district.

Of these fissure systems, which served as avenues for the mineralization, there are three opened in Tintic-to a certain extent parallel. One on the east, extending irregularly from north to south through nearly the whole exposed body of limestone; another on the west, shorter in extent, in which are located the Bullion-Beck, Centennial-Eureka and others, and a third between the two, comprising the mines from the Eagle & Blue Bell on the north to the Agax on the south, in which latter are situated the Grand Central and Mammoth mines. There is a gap be-tween the first mentioned and the Grand Central. Having in view the fact

Point-May Day is Again Active. The stock exchange this morning was again active though the amount of stocks dealt in was not near as great

as the two days previous, though in the neighborhood of 36,000 shares changed hands. The market may be said to be stationary, some stocks gaining while others were softer.

Today.

Daiy - West Reaches Its Highest

Daly-West opened the ball recording a sale of 5 shares at \$27 per share flat being the highest figure this stock has yet reached. Grand Central was likety. wise stronger and 100 shares changed hands at \$5.50. Lower Mammoth was again one of the features of the morn ing. This stock broke on the curb last night and sold down to \$1.15 per share, but had recovered during the night and sold up to \$1.30 per share, 7,200 shares being dealt in betwen that figure and \$1.27. May Day a one time favorite on the board gained some of its old time reconcists and was readed in to the av the board gained some of its old time popularity and was traded in to the ex-tent of \$,500 shares at stronger figures than yesterday's offiers, bringing as high as 45 cents per share. Rocco-Homestika still holds, its and 200 Homestake still holds its own, 200 shares entering the trading at figures around \$4 cents. Star Consolidated 1s weaker and sold down as low as 78 the office of the company, 86½ West Second South, at 8 o'clock this evening cents, but gained at the close of the call, and 80% was bid, the stock being to perfect their organization and elecheld a cent above that figure. Yankee Consolidated sold at the old figures, 6,their officers prior to filing their letters of incorporation. The company owns the Dewey group of claims in the Bing-ham mining district and the local own-500 being dealt in at about 121/2 cents. Among the non-sellers Ajax was weak-60 cents being offered at the close of the call. Dexter has also failen a few points, and was bid for at \$1.12½, but was held firmly at \$1.35. Silver King received a bid of \$68 without a share being offered. The other stocks were about at the old figures. The market at the olses was as follows: ers have succeeded in getting severa eastern capitalists interested in the property and will go to work at one to develop. Sig Simon is at the head of the company and will, beyond a doubt, be the president. at the close was as follows: Bid. Asked Work will be resumed on the Morn Ajax -63 58 ing Glory mine near Diamond in the 3734 40 has been file for some time but the management have determined to start 1.00 a winter campaign and development work will be pushed from now on. 4,00 Bullion-Beck 1% 15% Con. Prices-Speculation Quiet-Bonds Were frregular. New York, Dec. 13 .- Business was less active at the opening today than on any

Business Less Active Than on Any Previous

Day of the Present Week.

previous day of the week. The market was irregular but was inclined to move up after the opening under the leadership of Brooklyn Transit and the steel stocks. Later selling of Tennessee Coal and Iron lowered it almost 2 points and general weakness developed in the specialties, sugar. Federal steel, steel and wire and Brooklyn Transit reacting sharply. Hallroad stocks fell quite gen-erally below last night's prices, outside of Erle stocks, the first preferred of which advanced to the record price of 49%. At 11 o'clock the market showed improvement in spots but the main tendency was lower. A sharp rally in the steel stocks in the second hour showed better tone through the entire market but the resulting improvements were pretty generally wiped out when rubber preferred was forced down 3%, Met-ropolitan street railway 2% and augar 2%. Speculation then became quiet but

WESTERN ARMS & departure. Funeral services will be held Friday, December 14th, at 2 p.m., from Twenty-first, ward meeting house. Remains can be viewed from 12:30 to 1:30 p. m. at the residence of her mother, Mrs. SPORTING GOODS CO., Browning Bros.' Old Stand, 115 Main.

hat so far as I have observed, the inineral deposits are not confined to any particular beds of limestone or da mite, but cut across the bedding in dir and strike, only being locally, roughly parallel in position, to them: I am myself satisfied that only fissuring, such as I have outlined, can explain the origin of these main ore channels.

Although apparently irregular when onsidered in detail-with outlying considered wings apparently following for a dis tance, some subordinate cross-fissure, as in the Butterfly stope, for a distance of 150 feet or more, the ore channel under consideration, when consid-ered as a whole, and elminating the apparent bend, possibly due to a fault-ing movement of much later origin later origin. forms a fairly regular lode.

I should call it myself an ore de-posit, formed in and along and by the agency of a fissure, and hence to be classified as a fissure vein; although I find no definition of one which would precisely cover this particular occurrence. It might be designated a "pipe vein," so far as the present developed ore body is concerned, with an ore stem or pipe reaching to the depths, at the Mammoth shaft, and another as-cending pipe at the Peterson winze in the Grand Central workings, 1,200 feet or more to the northward, with awinding pipe connecting the two.

It is my opinion, however, that other ore bodies will be found later on the general line connecting the two as deeper workings are made.

A governing fisure, if it may be so called, is not easy to trace. In the great ore bodies all evidence of ore has disappeared through the original de-struction of the rock in the first deposition, and the subsequent secondary alteration

In the Grand Central 700 and 800, however, and in some parts of the 600 outside of the main ore body, an ap-parently regular fissure tein formation is found which here the formation is found, which may be a relic of the original fissure.

At places, two in the Mamm oth, the strike is found as in the west branch of the 400 north between stations 402 and 406 and on the 500 between stations 523 and 517b. A similar formation is seen in what has been called the "back vein" here, which I consider an offshoot or spur from the main ore channel.

The country rock, limestone or dolo mite, has an inherent power of healing up the fractures or cracks in its substance, in the process of circulating waters by the deposits of calcite, and the closer parts of the fissure zone may have been so closed and obliterated certain channels remaining open for the circulation of mineral solutions, special reason for the selection of which we cannot now

There has been muc . shattering and fisuring of the country at a date sub-sequent to the mineralization, no doubt, for the fissures are mineralized,

and in many cases are mineralized, and in many cases are still open, point-ing to a very recent formation. Mr. Tyler, continuing, said that the ore in dispute was between two barron crosscuts, shown to extend or strike northwest and northens between them northwest and northeast between them. The strike at that point was coincident with the general course or thereabouts

REVIEW OF WOOL MARKET.

Boston, Dec, 12 .-- The American Wool and Cotton Reporter will say tomorrow: "There is some improvement to be not-ed in the wool market, although prices cannot as yet be quoted higher. The demand has increased somewhat and the business has been more diversified. The sales are more generally distribut-ed in the trade, and the number of mananufacturers who have been buying is larger, but they are operating very carefully. Manufacturers are talking more hopefully in several instances and feel encouraged as to the outlook for the heavy-weight season. The colder wea-

It is of the greatest importance that parents feed their growing children, during study, on the most nourishing food possible to obtain, and there is no

house Slippers for man, Woman or child for the money than any A WINNING BOY. other thing on earth.

A Vicksburg, Miss., boy, J. B. Smith,

and

"I was determined to go through this examination, but felt so sick all the time that I didn't know how to accom-plish it. Well, mother saw the Grape-Nuts food advertised, so she bought some and gave it to me for breakfast

average that was the highest mark in the room. I am also able to take part at the military drill tomorrow night at the exhibition and will try for the gold

"I began to get well at once and grow hearty and fat, in spite of my hard work. Above all that I did beat my room at examination, making a general

every morning, and you just ought to see what this food did for me.
