CHEAP STABLE.

It Can Be Built for $300—General Talk on an Important Subject.

It costs a relatively large sum of money to build a really good stable. The ideal stable, if carried out, involves large expenditures. However, with an ordinary house which has a stable on the back end of the lot, the stable is generally very cheap. It costs from $250 to $300. The sketch here given is for a stable of moderate cost, and involves the use of a small sum of money, say $300 or less.

In the ideal stable the foundation would be of stone until it was above grade. The walls would be of brick of the ordinary kind on the outside, and those on the inside would be of enameled brick. The carriage floor would be of concrete, and stall room and stalls of an impervious asphalt. The carriage room and stall rooms would either be detached or have an air tight separation. It would be better to have them detached and only connected by a covered way. Thus the carriages and harness would not be injured by the ammonia exhalations from the natural offal of a stall room. There are those who will say that a wood floor is superior to one of asphalt, clay or other material.

FRONT ELEVATION OF STABLE.

I cannot think that any material for a floor is healthful which may become saturated with the natural impurities of such a place. A wood floor is not only saturated, but the ground under it becomes foul, and such a condition has to a certain extent the same effect upon a horse that it has upon a human being. The odor from such a stable is well known; it is common and is only tolerated because it comes from a stable. People who have large sums of money invested in horses are so careful of the manner in which their horses live as they are of the quarters in which they live themselves. Those whose business it is to handle expensive horses are aware that they are subject to malarial and typhoid fevers and other diseases which are due to local causes.

Such events are very particular about the quality of the water which their horses drink, the temperature of their rooms, and altogether exercise the same high discretion observed by an intelligent person who has charge of human beings. In a stable which has the impervious floor, the enameled tile walls, and, as well, a waterproof plastered ceiling, it is possible to turn a hose on everything and wash it out clean and pure. Particularly is this true when good drainage is afforded. Being constructed of impervious material, such a stable cannot remain damp.

The best arrangement for a stable where the horses and carriages are in the same building is to have the vehicles on the first floor and the horses on the second. This makes an impervious second floor necessary, and, as well, an inclined walk way to the second floor. Horses do not object to going up a proper incline. This plan allows the ammonia exhalations to pass out, without possibility of their coming in contact with the harness or the carriage varnish. Such an arrangement is common in large cities where ground is expensive. The writer has seen four story buildings with horses on the three upper floors and vehicles below.

In the stable plan herewith submitted the conditions of a high character suggested above are omitted. The carriage house has a board floor and the stall rooms a tongued clay floor. It is necessary in a floor of this kind or one of asphalt that the horses stand on bedding and that the stalls slant to a little gutter at their rear. The carriage room doors are suspended on door hangers from above, and for that reason slide to each side of the opening. The door connecting the carriage room and stall room may be on hinges, for the reason that it would be tighter, and to a greater extent prevent the passage of ammonia, than if it were a sliding door. The harness room opens into the carriage room, and the bedding receptacle into the store room. It is presumed that the bedding in this instance would be of sawdust. If straw, it can come from the loft above.

SECOND FLOOR.

In the carriage room may be arranged a washing stand, which should have connection with sewer or vault. Thus the water from carriage washing is readily disposed of. The receptacle for the water should be cemented and carried in a close drain to its proper outside receptacle. The bay is put in racks from above. These racks, as well as the sides of the stalls, should be made of maple. Maple, be it known, a horse will not bite or chew. The writer has to mind a stable in which he made the slats of very slender strips of maple, which a horse could easily break with a slight pressure from his nose or head. It has not been damaged in the two years of the use of more than three years. The small grain feed comes from bins above to a box at the foot of the stairway. This stairway goes to the hay loft and living room for hostler above.

We hear a great deal about stables being set on fire by hays. In cities where frame stables are built conflagrations are very frequent. However, where there is one lost by fire through incendiarism, I believe there are fifty losses which originate in spontaneous combustion—spontaneous combustion which is the result of filth and grease about these structures.

This building is entered with deep or German bars sliding on the first story, and shingles on the second story and roof. The two dormers on each side give it a picturesque appearance, and altogether it would make a comfortable cheap stable.

LOUIS H. GIBSON.

One morning paper in a large city recently continued the record of no less than twenty murders and suicides in that city and a part of the country around it. This record did not include the number of affrays that did not immediately result in death, but only those where life was already extinct at the time the paper was put in type. The area embraced in this dark history was situated mostly in the northern states on the Atlantic coast, though a few were in the interior of the southern states. Strange to say, the lawless west did not furnish one murder to the journal's death columns. Then a second sensation to be a frenzy of murder and suicide in the northeast portion of the country. Doctors attributed it partly to the effects of the grip, which occasionally results in pneumonia, sometimes in insanity.

THE CRY OF MILLIONS
OH, MY BACK!
STOP IT NOW,
SOON IT WILL BE TOO LATE.
I have been troubled many years with disease of the kidneys and have tried many different remedies and have sought and from different physicians without relief. About three months ago I was suffering from a very violent attack that almost prostrated me to such a degree that I was bent over. When I set down it was almost impossible for me to get up alone, or to put on my clothes, when Rod Fredenburg sent Dr. Hanley, with his OREGON KIDNEY TEA, to my hotel. I immediately commenced using the tea. It had an almost marvelous effect, and to the astonishment of all the guests at the hotel, in a few days I was happy to state, that I was a new man. I would recommend the tea to all afflicted as I have been.

WHAT IS A GUARANTEE?
Many merchants and salesmen are in the habit of indiscriminately "guaranteeing" their wares with no thought of being called upon to make the "guarantee" good. It is a pernicious and foolish custom more respected in the breach than in the observance.
A guarantee, to have any value, should be made with knowledge of the meaning of the word and a set purpose to carry out the terms of the guarantee. On fine tools the makers instruct us to warrant, and we replace any tool found imperfect in use.
We have used our best judgment, acquired by a considerable experience, in selecting the following items for our stock and sell them to our customers with an absolute guarantee that if they do not prove to be all that we represent them, we will refund the purchase money in full.
"Jewel" Steel Range. A finished article, perfectly proportioned, made of the best material. Don't fail to see it. It will pay you.
"Quick Meal" No Generator, Evaporating. Light it as you do your gas burner. No smell. No danger. No complication. Every objection to the use of a Gasoline Stove done away with. Think of the discomfort missed in Summer by avoiding the heat of a big Kitchen Range.
"Superior" Cooks and Ranges. Superior as bakers. Superior in economy of fuel. Superior in design. Superior in construction. Superior in everything that goes to make a perfect cooking apparatus.
The "Crude Refrigerator." An Ice saver. A Health promoter. Cellular throughout. What is that? Investigate it. It will more than repay you.
Our stock of Builders' Hardware, Hose Furnishings, Garden Hose, Lawn Sprinklers, Lawn Mowers, etc., is complete in every detail.
