BANKRUPTCY OF WM. GROESBECK

List of Creditors from Whom He Seeks Relief.

LIABILITIES VERY HEAVY.

Aggregates More Than Half a Million Dollars—Biggest Failure Yet Filed in Utah.

To William Groesbeck belongs the distinction of having filed a bankruptcy petition with the largest aggregate list of unpaid creditors, ever before presented to the Federal court. It was filed late yesterday afternoon and shows Mr. Groesbeck to be indebted in $565,671.81 with interest shortly approximating $600,000 more. There are no assets of any description, therefore the outlook for the creditors is not very reassuring. The time of the papers was not set at all unexpected as Mr. Groesbeck's financial affairs have been in a hopelessly tangled state for several years, largely the result of mining speculations in Idaho and heavy reverses sustained during the days of the boom that proved so disastrous to so many Salt Lake business men.

LIST OF CREDITORS.

The list of creditors named in the petition is as follows:

C. H. Lombrook, Bingham for merchandise 58.20
Prince of Wales coal company, New York, joint judgment against Fred Houghton, William Groesbeck Jr., and William Groesbeck Sr. 145.00
C. P. Coal company, Salt Lake City, joint judgment against the same three parties 2,052.15
C. J. Woodbridge & Co., New York, joint judgment against the same three parties 188.29
W. S. McCornick & Co., Salt Lake City, joint judgment against Hyrum Groesbeck and William Groesbeck Jr. 1,628.79
First National bank of Fort Collins, joint judgment against N. H. Groesbeck and William Groesbeck 1,238.75
National Bank of the Republic, assigned to George A. Lowe, joint judgment against J. A. Groesbeck, Hyrum Groesbeck and William Groesbeck 13,242.80
Theodore Abbott, Philadelphia, joint judgment against William Groesbeck Sr., William Groesbeck Jr. and F. E. Houghton 129.50
Henry Dupont & Co., joint judgment against William Groesbeck Sr., William Groesbeck Jr. and Fred E. Houghton 327.52
Chemical bank, New York, joint judgment against the same three parties 694.25
Newburgher Price & Co., New York, joint judgment against the same three parties 3,486.40

SCIENTIFIC MISCELLANY.

Fixing Wood—Vegetable Monstrosities—Animal Nursing Bottles—Holding Glass—Steel Hardening Without Cracks—Oxygen as Insecticide—A Shipbrand Sand-Blast—Submerged Rivers—Trees as Expansimeters—Long Viewing

A simple method of electroplating on wood has been described by Mr. C. F. Burgess, who believes that the process should be of considerable advantage in decorative work. The article is saturated with copper sulphate, which—after drying—is converted into insoluble sulphide by exposure to a current of sulphureted hydrogen gas, and the sulphide is then reduced to metallic copper when the wood, lightly wrapped with fine copper wire, is corroded for some minutes in a solution of cuttlebone, potash and water, to which a current is applied for half an hour. A copper coating of any desired thickness may then be given in the ordinary plating bath, a silver coating being finally added if desired.

A study of the strange and little understood abnormal growths of plants has been made during the last twelve years by Mr. Hugo de Vries. Fresh seeds of the unnatural plants he has reproduced, mainly specimens of normal type, but a sufficiently large number of abnormal individuals to prove that the abnormality is hereditary and a result of disease. The only seeds really reproduced in the succeeding generations are those given given some plants by parasites.

A sponge of honey is a small pot was carried by Greek nurses to soothe children, said Prof. Mosley in a late address to British antiquarians. In the British Museum are two Greek vases, dating from 700 B. C., that are much like the later Roman feeding-bottles; and another old example is a low-shaped terra-cotta vessel, with a funnel rising from the middle of the back. A feeding-bottle taken in 1861, from an old Roman cemetary at Canterbury with its infant skeleton.

A vegetable origin of tuberculosis has been suggested. The latest investigator of the subject is M. Mosler, who has found on an abundant grass of France a bacillus so strongly resembling the tuberele bacillus as to give rise to the disease when the two may not be one organism modified by environment.

Ceramic stone, or decitrified glass, is attracting especial attention in France. Large factories—using broken bottles for raw material—have been built near Lyons, and the product has been under test as street paving for several months, the manufacturers claiming a durability greater than ordinary stone at less greater cost, with immunity from frost in winter, and from liability to collect dust and harbor noisomes. According to a report of the Civil Architectural Society of France, it appears that the ceramic stone is simply glass brought to a special molecular condition by heat and hydraulic pressure. It retains the physical and chemical qualities of glass, except the transparency, but appears like a new substance, resembling diagenite, granite, or marble. It is given greater resistance to crushing, frost, heavy shocks, and wear. The stone is already made into blocks suitable for street paving and floors, into imitations of polished marble and mosaic, into ornamental panels, and into pipes and tubes and as a building material for houses and for tubes it is said to be lighter and cheaper than brick.

In a new process of hard-wing steel, the metal is first coated with a mixture of whiting and varnished. It is then heated to a dull red, dipped for a few seconds in acidulated water, then for a slightly longer time in raw oil, and at finally laid in a cooling bath of rock oil or a mixture of water and whiting. The first dipping into water is said to draw away the heat from the water layer, hardening it while the dipping into rock oil retards further cooling, reducing the final cracks.

Some new rosetty produced by electrical means is likely to find other fields of usefulness in addition to destroying insects and germs. The latest effort in this direction is reported by Mr. J. H. Lompson, an English botanist, to be unlikely fatal to the insects of the garden, and other pests of conservatories, while it does not harm the plants.

A singular and unexpected source of disease now lately discovered, on a French boiler. The top of the tun was covered with sand and a fire steam-jet escaping overheated a tiny sand-grain in particles in motion, creating a novel sand-blast that was rapidly cutting a hole through the shell of the boiler when the leak was fortunately detected.

Some curious estimative features of the coast of eastern Europe formed the subject of a lecture by Prof. Edward Hull. The land above one of this coast was at one time 1,000 feet higher than today, all the Frisian and Dogland together, and extending far into the North Sea on the west, the abutment of the land great rivers sink into the ocean. In the center of the English Channel is one of these old river gorges, which can still be traced from the straits of Dover westward for several miles, and which reaches a depth of 200 to 250 feet below the bed of the Channel. It is known from its discoverer, as "Hind's Deep." The adjacent France once flowed through a river that can now be followed for sixty or seventy miles on the sea's bed, and an ancient island in this river is now city miles from land and one foot beneath the water's surface. In these river courses must have been magnificent cataracts, the descent being in some cases as much as 100 feet in a mile.

The trees serve to. Mr. John Gifford points out, by improving the soil, and by actually making both soil and land as well. They bring from deep layers great quantities of mineral matter, and in their leaves they deposit much of this on the surface, where is collected a mouth of humus of constantly increasing richness. The trees form and by sending out acid-charged rootlets, which, with the aids of the decaying humus have a potent effect in disintegrating the rocks. How the trees make land is strikingly illustrated by the quarries, which grow with water under several feet deep, collecting sediment and humus about its roots, and thus advancing the shore line. In time the parent trees seedlings tend to extend still farther out.

The early detection of tuberculosis is very important, and by a Dr. Hodgkinsky finds that a positive diagnosis of the disease at its beginning is made possible by X-rays. In cases of pulmonary disease the degree, position and relation of the affected areas were more fully and accurately shown than by any other means.

Quick drying of lacquerings is effected by German electrical manufacturers at ordinary temperatures by passing the objects in vacuum.

GARCIA' BIG HEART.

Hundreds are the stories Cubans are telling of Calixto Garcia, the Cuban general, whose death occurred some time ago in Washington. Men who served under Gen. Garcia knew him to be a strict disciplinarian. In fact, there are those who have said he was almost a martinet. He was faithful was to so his own duty that he was ready at all times to sacrifice his itself for his country, and he expected every man who marched under the flag of Cuba to be faithful to himself.

But too, Garcia was never without sympathy for his followers. There never was a time when he would not sacrifice himself for one of his men.

During the siege of Guisimico, in December, 1896, in which he captured six men forts in twelve days, one after another, he was reconnoitering one day when a young planter who had cast his lot with the insurgent band was struck by a Spanish sharpshooter's bullet and fell to ground within a few feet of the general, mortally wounded.

Garcia dropped his field glass and hastened to the fallen young fellow's side. The Spaniards opened fire on the spot, but, heedless of the bullets, the general raised the soldier's head and took from him a message to his sweetheart at home. Garcia stayed with the soldier to the last and escaped unhurt.

Weeks later, in another part of the island, the message was delivered to a dark-eyed girl, who sailed in vain for her lover.

Shortly before war was declared between the United States and Spain, Garcia was sitting one day watching a soldier who was roasting the half-dozen potatoes which were all the depleted commissariat afforded for the general's dinner. With a wistful eye two soldiers stood a short distance away, looking at the potatoes as they were drawn from the coals. Garcia noticed the men and signaled for them to approach.

"Well, did you test out, Jose?" he asked the spunkiest of the two.

"Last night, general."

"And then?"

"Half a potato, sir." I gave the other half to Manuel here."

"Well," said Garcia, pointing to the fire, "take those potatoes and eat them. We have work to do tomorrow."—Philadelphia Inquirer.

An Excellent Combination.

The pleasant method and beneficial effects of the well known remedy, Syrup of Figs, manufactured by the CALIFORNIA FIG SYRUP CO., illustrate the value of obtaining the liquid laxative principles of plants known to be medicinally laxative and presenting them in the form most refreshing to the taste and acceptable to the system. It is the one perfect strengthening laxative, cleansing the system effectually, dispelling colds, headaches and fevers gently yet promptly and enabling one to overcome habitual constipation permanently. Its perfect freedom from every objectionable quality and substance, and its acting on the kidneys, liver and bowels, without weakening or irritating them, make it the ideal laxative.

In the process of manufacturing figs are used, as they are pleasant to the taste, but the medicinal qualities of the remedy are obtained from senna and other aromatic plants, by a method known to the CALIFORNIA FIG SYRUP CO. only. In order to get its beneficial effects and to avoid imitations, please remember the full name of the Company printed on the front of every package.

Horses Kick

in self-defence. It is their most dangerous form of protest against the abuse of Rubber Nails that are driven into their feet to hold on their shoes. Horses feel the use of such nails in proportion of the danger that is inside to fellow.

This is what happens: One part moves out where it should be clinched, the other goes down into the quick. Such nails are the result of the Cold-Rolled and

Shearing Process

by which the fibres of metal are separated and can other be pried apart with the finger-nail. This kind of a nail can be easily distinguished by the rough edge along the same near the point.

Putnam Nails

are exclusively Hot-Forged and Hand-Pointed. Putnam Nails are made of Selected hard-made nail. This process welds all particles of metal together, gives nails a compact, firm and tile cannot split, Sliver or Break and is

Absolutely Safe.

Examine the nails in your smith's shoes the boy. If they edges are smooth and round, they are Putnam Nails. If they have the Hot-Forged Pointed, if that edge shows rough, ragged edges and sliver, you have cold-rolled and dangerous.

Nearest ring, nickel plated, mailed on receipt of 10c. in stamps or silver.

PUTNAM NAIL COMPANY,
Dept. 20, Boston, Mass.

YOU DON'T HAVE TO PAY A CENT MORE

Here For a Good Suit that you want to, for if $5.00 or $7.50 or $9.00, or $12.00 is the price you want to pay, we'll guarantee you more value for the money than other stores.

These $7.50 suits are wonders for the money. Cheviots, Clay Worsteds and Blue Serges, cut in the latest fashion—are carefully tailored as the better suits, and perfect fit guaranteed.

Clothes for boy or young man too, as carefully tailored.

Boys be time to change underwear; we're ready.

ONE PRICE.

J. P. Gardner

136 and 138 Main Street.

Let's Look at the Facts —as They Are!

The Siegel Clothing Company wears the crown of leadership more deservedly than ever.

In all your clothes-buying you've never seen SUITS AND TOP COATS to compare with our new SPRING LINE—they're absolutely without peer in Salt Lake—or anywhere else.

You'll SAVE MONEY—SEE THE HANDMADE prices. Tailor-MADE-at-HOME prices. Tailor-MADE-at-HEART-prices. Tailor-MADE-at-CHEAPNESS. Each particular seemed to laugh—we made it conscious. The heart of our house personally supervises every stage of progression from the purchase of the fabrics to the completion of the garments—we know—we know them to be better values, better fitting, more satisfactory in every way than those that cost more money elsewhere.

It's your money's worth that you want.

AND YOU GET IT HERE.

Take advantage of these dull days that stand between you and the need of those SPRING WEIGHTS to look through our varied variety of the handsome and exclusive styles we have provided.

You'll find our stock three times larger than any other, and yet there are some that stand on style of imagination and problem themselves leaders.

PROBE TO THE FACTS and they'll rush over under the weight of their own preponderate superiorities. Work makes leaders, not boasts. Truth doesn't need any trumpets.

OUR TRIUMPHS PROCLAIM US.

Men's Suits, $7.50 to $25. Men's Top Coats, $7.50 to $25.
