THE MINING SUIT.

Few Witnesses Examined in This Important Matter.

When the News report in the Northland-Mayflower mining case closed yesterday Mr. John Longmaid was under cross-examination.

Attorney Dickson interrogated him in regard to samples of rock he had obtained. Taking up the question of his formation, Mr. Longmaid stated that limestone was eaten away by waters containing carbonic acid, and the space was sometimes filled with ore.

"Now, what is the hanging wall of this vein?" asked Mr. Dickson.

"It is limestone," answered the witness.

"Yes, and what kind of limestone?"

"Various kinds. There is blue sparry lime and grey lime."

"Then if any witness has testified that the hanging wall is all in grey limestone, he is mistaken?"

"Yes, he is mistaken."

"You found the blue sparry lime in the Court upstairs?"

"Yes."

"Haven't you found calcareous quartzite underlying this vein at various points all along it?"

"Yes, but I don't know that they are all of the same bed."

"Can you give to the jury any reason why this quartzite in the east mine is not continuous?"

"Well, the limestone is not continuous in all places there, and I see no reason why the quartzite should be. It is a matter upon which a decided opinion cannot be given. The quartzite out at the two points of the mine may or may not be the same."

"To which opinion do you incline?"

"Rather to the opinion that it is not."

"And it is your opinion today that the apex of the vein is at the face of the Northland shaft, in the Nevada lode?"

"The visible apex, certainly."

"Do you think the vein continues on the land?"

"Well, that only can be determined by future development. It may run on."

"Then, on the last trial, what did you intend the jury to understand when you said that the pinnacle apex formed that raise?"

"I had in thought whatever as to the effect on the jury?"

"Well, what did you mean?"

"That the vein, if it continues, is a little, thin seam, and if found could not be traced."

Going down to the perjury style, the witness admitted that the report published in the spring of 1890 was in the style, as used at the last trial, was an exaggeration. "But it was done at my request," said Mr. Longmaid. "The work done since then had shown their theories about the style were incorrect.

"Isn't it a fact," asked Mr. Dickson, "that the work done by the plaintiffs in the east mine disclosed that the perjury is simply here and not a style?"

Mr. Dickson next tested the knowledge of the witness in the science of geology, by reading from authorities on vein formation, the composition of carbonic acids, etc., and it was nearly 4 o'clock when Mr. Dickson turned the witness over to Mr. Williams, who asked:

"Are you interested in the result of this suit?"

"No."

Henry Outlinski was called by the plaintiffs. He gave a great many elevations, and on cross-examination by Judge Marshall, he stated that although the perjury was discovered in 1890 and 1891, he had never taken the shifts there.

C. E. Street was recalled and stated to Mr. Dickson that in making his estimate of the amount of ore extracted in the triangle he had not gone outside of the vertical planes down through the sides of the triangle.

The plaintiffs here offered the maps in evidence and Mr. Williams said "We rest."

Attorney Arthur Brown then took the floor and moved the court for a non suit as to any premises described in the complaint outside of what is known as the triangle," on the following grounds: That it is not pretended or claimed, and no evidence has been introduced to show that the plaintiffs are the owners of the apex of any part of the vein outside of and beyond said triangle. That no evidence has been introduced to show that any part of the apex of the main vein beyond the said triangle lies either within the Nevada or Northland mining claims. That no evidence of any damages in this action for trespass has been shown outside of the triangle. There is not sufficient description of any vein outside of said triangle upon which plaintiffs are entitled to recover, either in the complaint or in the proof. That the lease does not give the lessees any right to follow any vein outside of the Northland and Nevada claims, if said vein does not apex in said claims.

Mr. Brown made a brief argument in support of the motion and for a nonsuit. In opposing it, Judge Boyle objected strenuously to the motion being granted, insisting that the plaintiffs were entitled to recover for ores taken beyond the triangle up to a certain time.

The Court—The question arises as to whether, even if the vein did apex in the Central Hill, that is a portion of the Northland or Nevada lodes, to which the plaintiffs have the lease, would it not be the Central Hill lode?

Judge Boyle—I think not.

The argument were then renewed, and the law of trespass, etc., discussed at length.

His Honor then said to Mr. Dickson: I suppose the prime time to save injury to the plaintiffs would have been when they offered the evidence.

Mr. Dickson—Yes, your Honor, but for a fact that we couldn't tell where they claimed the apex to be. It will be remembered that we tried to get them to say where it was, but failed.

The Court—Yes, they have not proved damage beyond the Northland, and I am confined to control the matter by instructions.

Mr. Dickson—That is satisfactory. It may be limited in that way.

Attorney Arthur Brown then came forward with another motion for a nonsuit, this time as to all of the defendants named in the complaint except Reith, Hearne and Judge. None of the others were shown to have the slightest interest in the matter, and he moved that it be limited to those named, including W. S. McCornick, Memis, Richardson, Emery, Iverson and others.

After some discussion between Judge Boyle, Attorney Dickson and the court, Judge Zane had given the jurors the usual caution not to talk with anyone about the case, the court adjourned until this morning.

Probate Court.

The following business was transacted before Judge Hartch today:

Estate of Jacob Hasenggi, deceased; petition for probate of will came on regularly. Mary B. Hasenggi, F. J. McKenna and Joseph Hasler sworn and examined. Order made admitting will to probate, and appointing Mary B. Hasenggi executrix.

Estate of John Cunningham, deceased; final account came on for hearing. W. W. Chisholm, John Marlon and Mis. Cunningham sworn and examined. Account allowed. A certificate of ownership in Mt. Olivet cemetery having been inadvertently filed in this estate, on motion of W. C. Hall, attorney for widow, the same was allowed to be withdrawn.

Estate of J. H. Pickett, deceased; continued to April 6.

Estate of Maggie H. Jennings, deceased; petition for letters of administration came on per continuance. Frank W. Jennings sworn and examined. Order made appointing Frank W. Jennings administrator on filing bond in the sum of $400 and taking oath.

Estate of Rebecca Wynnes, deceased; petition for probate of will came on per continuance; W. C. Hall argued in support of probate of will. Mr. Pierce will follow this afternoon.

Estate of James Glass, deceased; order made fixing April 18 to hear petition for commutations in partition.

Estate of Frank H. Dyer, deceased; order made fixing April 12 to hear petition for probate of will.

Estate of Mary Dielhugh, deceased; order made fixing April 6 to hear petition for discharge of administrator.

Estate of Andrew Hosner, deceased; order made appointing appraisers.

Estate of Hetar P. Kimball, deceased; order made fixing April 12 to hear petition for settlement of executor and petition for discharge.

Estate of Walton O. Sawyer, deceased; undertaking for costs and damages on appeal approved.

Personal.

J. E. Congdon, of Provo, is at the Cullom.

Mr. Jones, city physician of Ogden, is in Salt Lake on business.

George W. Dunbar, the manager of the Idaho Statesman, is now employed on the experimental work at the Tribune.

Reverend Edward N. Merriam, of Mt. Pleasant, and his wife, are at the Knutsford.

Fred Sutherland, of Provo, is now a guest at the Cullom.

Thos. Wainwright and party are at the Cullom.

A. G. Sneed, jr., of Provo, is registered at the Knutsford.

L. G. Doty, of Spanishville, is at the Walker.

A. E. Davis representing Reid & McNally on the stage, is at the Continental.

J. W. Mendenhall, of Nephi, is at the Walker House.

Dr. Finkelstein and wife have gone to California on a pleasure trip.

Judge Moses Hallett, of Denver, is sojourning at the Knutsford.

George W. Emery, of Wallace, Idaho, is at the Cullom.

Mr. Life Insurance a Success.

M. N. Allen, of Greenville, who has enlarged ideas on the subject of life insurance, has made arrangements to visit Central America on business and pleasure. Having paid up his insurance policies in three companies, he had to apply to them for a permit to make the trip. One of the companies returned him a very indignant reply and the other two demanded of him a large premium for the privilege. Mr. Allen has determined to postpone his trip until he can look up the authorities to see whether he can go away without sacrificing a part of his policies. Central America is the home of revolutions, fevers, venomous reptiles and wild beasts, and naturally the traveler in that glorious climate is not considered a first class risk.—Jacksonville Journal.

The Seven Sleepers.

The Seven Sleepers were seven noble youths of Ephesus, who in the time of the Decian persecution, it is said, fled to a certain cavern for refuge. They were pursued, discovered and walled in the cave, the perpetrators of the deed hoping to mete out a cruel and horrible death. However, according to the legend, they were made to fall asleep and were miraculously kept alive for nearly two centuries. Their names are given as Maximian, Malchius, Martinian, Denis John, Serapion and Constantine.—St. Louis Republic.

Landlorne Beats a Royal Flush.

John Ferndale drew a royal flush of diamonds at a poker game with Frank Marble at Coal Run. The fellow drew a full hand, king high, when twenty dollars were in the pool. Marble, superstitious, called Ferndale to Fernandez's glass containing beer. Before the game ended the latter was unconscious. Marble secured the stakes, stole a watch and eighty-four dollars from his opponent and fled.

Young Artist (to a friend, who has recently furnished a bachelor apartment and Charley, dear boy, I admire your taste. I see you have a Brie-bric-a-brac hanging there.

Friend—Sir, did you paint that?

Young Artist—Yes, I'm proud to say it's from my hand. By the way, Charley, if it is a fair question, what did the dealer charge you for it?

Friend—Well—er, to tell you the truth, old man, he made a double charge that picture is undoubtedly a gift.

The Rich Manufactures of Eulope.

The wonderful manufactures of our great metropolis are now supplied in that, and the wonderful exports of the strange articles from Boston to be known, and the commercial world realized the fact that a new force had entered the industrial field, which was destined to play an important part in the arts and manufactures of the Nineteenth century.—Virgo's Companion.

BORN.

Saturday, March 26, 1892, to the wife of Charles E. Spencer, Marion St. Poll, a son—good for Mormon and Gentile doing well.

TYING CONVS.

Comfortable Shoe and Tie designed as a substitute for the tight mortcrible.

A recent and interesting contribution to the much-discussed question of "tying cows" is the work of a writer in Hearth's Dairyman, who deprecates the use of the rigid stanchion, for which he ad-

SECTION OF STANCH.

vocates advance the idea of the cows required not dangerous. He practices a method which he claims combines all the qualities of the rigid stanchion with ease and comfort for the animal which the rigid stanchion lacks.

The accompanying draft of a section of stanchion shows the method of tying the platform on which the cow stands. It can be made of wood, with or without a gutter, but a gutter is preferable. It is a position to keep the cows from interfering with each other. It is a neat to the manger, eight inches high in the center. It is two rails, may be either iron or wood. It is a flat, tough piece of wood, with rings fastened to each end, that they may slide up and down on D D. As the cow gets up and down, E slips previous the cow from slipping to the manger. The back of the manger should be made to slant back toward the cow, so it will give more room when the cow is lying down, and draw her forward when she is lying down. F is a rope or strap, connected to E by a swivel, that goes around the cow's neck. There is no pinch on this, and any man who can use a saw or hammer can get one up.

Cayuga Ducks.

The Cayuga is an American breed of duck which is highly esteemed for table purposes, its flesh having been pronounced by some authorities as of even better flavor than that of the wild duck. An excellent characteristic of this breed of ducks is their quietness, for, as they are not so much inclined to wander to stray away and wander far from home, and can therefore be fed more at liberty. Mr. James Rankin, whose ca-

PAIR OF CAYUGA DUCKS.

pabilities will be noted with interest, "found that the Cayugas were more productive birds than the Rouen and more hardy than the Pekin, and were better. The ducks were also much hardier, and as a consequence there was less mortality among the young. But they were rather small in size, dressing only seven to nine pounds the pair."

In general it may be said that the Cayugas are useful fowls, being hardy, maturing rapidly and laying well. They are also naturally good layers.

These birds are a pair of which is represented in the cut, are of a lustrous jet black color, with brilliant green or purple lustrous gloss. The shape of the bill is different from that of other kinds, as it curves from the head down towards the center of the bill and upward again to the tip, in dish shape. The legs are a dull orange color, with a network of black over them. In shape and size the Cayugas resemble the Aylesburys.

Raising Beans for Market.

An Indiana farmer correspondent gives his method of raising beans as follows:

Use only pole seed and a kind that ripens quickly.

Break the ground early and let it lie so as to germinate all the weed seeds.

Do not plant until from the 1st to 15th of June on account of the worm. Before planting cultivate the ground thoroughly so as to destroy all the weeds.

Plant the beans in rows two feet apart. Drill the seed at the rate of one third of a bushel per acre if free from weeds, otherwise, one-half to two-thirds of a bushel.

Then with an iron double bill longue cultivator which will admit of adjustment so as to pass 18 the row. Use a dial trader on both sides of the plow. With this implement one man and horse will cultivate five acres a day.

We usually pull the beans when the pods are about half yellow and the green pods have full sized beans, if the weather is dry. If it is raining every few days we allow them to stack before pulling.

We thresh with a small separator and reclean on a fanning mill, with one screen the proper size to remove the broken pods and stems and bulls eyes. Then a screen is put below to take out all the split and broken beans. This screen looks like an ordinary coal screen, only the meshes are a little more than six wide by eight.

If your crop will not shatter, but some grasses and suppose, in cold weather, remove some of it from the stacks, or you can break the rod.

Little Lucy.

A young man of the city of his life saved a beautiful girl from drowning. Her grateful father asked the owner of the young man's name and in a voice trembling with emotion said:

"Young man, in you I am indebted for everything that makes life dear to me. Which reward will you take—gold or the hand of my daughter?"

Off goes the dingbats, pulled his hence reacher, thinking thereby to get both the girl and the money.

"You have your choice," replied the generous father, "if you had been giving me the gold, I would just say nothing, but I have not money enough to pay for my daughter. Take the girl and be happy. God bless you, take her and be happy. Gold bless you, take her and be happy."—Texas Siftings.

Liebig COMPANY'S Extract of Beef

A PERFECT ANALYSIS AND ABSOLUTELY GENUINE.

RECIPE FOR FISH SAUCE.

Now, had a contemporary of Soyer in charge of either of these, with so much Liebig Company's Extract of Beef, which is equal to about 40 times its weight of ordinary good beef, as a basis, or foundation, for the sauce, and, of course, the fish, and a proportionate quantity of the spices and potted anchovies, say to a quarter of a pound of fresh butter and as much of the spices as anything else, the result would be a delicious sauce, the flavor of which would be a revelation to the eater, and a delicious dish, was now the result, not fish, but the fish taken in the dish, so to speak, a regalia.

BE SURE THAT YOU GET THE GENUINE

Liebig COMPANY'S Extract.

with Justus Von Liebig's signature on the Jar, as shown above.
