IT'S A GREAT BIG MINE.

The Decision of a Veteran Concerning Uncle's Best Property.

GOLD AND COPPER ORE EVERYWHERE.

Prospective Mill for the Washington—As it Was on Friday—To Develop the New Strike.

"It's the biggest mine you ever saw. Why the ore bodies are simply immense. If concentrating of gold and copper can be done on every hand, and the ore is so wonderful as to make one speechless, why shouldn't the Washington be a great producer?" Such was the enthusiastic exclamation of a veteran of the Uncle Sam mine, concerning a mine of clear cut, which promises to beat all previous records as a producer of high-grade copper ores. The veteran had just finished an hour's tour of inspection to the property, and was highly enthusiastic over it. His statement, however, was backed up with more detailed information by prominent men, who speak as one in saying that the Washington ore is a good one, and, by the mine owners, and a sense of geological position, and it was the opinion that ores in report would have wealthy hold back in Bingham and Mammoth district, if the Washington high-grade ore was the property to which he had referred.

The speaker was none other than a man who has spent the greater part of his life in the development of Utah's mines, and is a gentleman who is now in the south side of city. He is a man whose opinion is sought by the mining world, and who knows whereof he speaks. The ore he referred to is the Washington mine, which is only a mile and a half from the Uncle Sam, and is in the same belt. The veteran had not be could to get down to work in the mine, but had visited the mine at good deal of time on their dumping ore. It is a mineral vein of ore that will run equally well in the mill. The gold quartz in the upper stopes ore at the outcrop is exceedingly bulkiest, and the value are in proportion.

The company, incorporated the gentlemen, Messrs. Rowling & Barnes, are now at work, and had that when it is finished, their shipments will be very favorable strengthened, with the ores coming out of the work now. They are sure to be bigger than Uncle Sam in the quantity of ore, and the value of the ore is almost as high. And it is a fact to a paying proposition for a mine of more than a mile in length.

The contract then spoke of the Gold Control, which on Friday days closed at $2.25 per share, the number a total of $2,500, and coming on with the assurance that very soon, or by September at the latest, dividend payments will be increased.

The Washington's Prospective Mill.

Relatively returns from the recent shipment of Washington concentrates, which were made to the Grand Central smelter, are very satisfactory, and it is stated on good authority that in all probability the mine will be equipped with a mill. The mine has been sufficiently developed to warrant it. The mine, it is said, has all the ore which is needed for a mill, and though progress is slow, it is proceeding a good pace, of stopping and mining work. Prospective mill point to very favorably because of a good body of ore to feed to it, for the owners are not in the ore business. Manager Pierce will soon come to Ophir this month, and will fully examine the property in other matters.

AS IT WAS ON 'CHANGE.

Silver Stocks Show in the Day's Trading—Such Business Active.

Listed stocks had a little the better of the tussle in the pit today and so did the unlisted, but in part in the trading, the honors go to the former, which seemed to be well taken, and should be fostered and encouraged for all interested in the welfare of the State.

Shooting in the Cambria.

B. J. McGuire has struck a wonderful rich body of ore in the Cambria mine at Frisco. He has 15 feet of solid quartz, averaging $60 per ton, and beside this opened up the vein over 40 feet for the entire length of the claim. The new strike is the same as that in the vein and the largest one body yet found in Frisco. There is no question about McGuire's skill as a miner and prospector, for he is the original locator of the famous Banner mine, and also owns the Cambria, Yellow Jacket, Cheyenne, Gilt Edge and other properties in the heart of the Frisco mineral belt, out of which it is to be hoped he will secure a fabulous mine millionaire.—Graneville, Ida., Free Press.

Rich News from Gilsonville.

On the 1st of June the Montana & Idaho Gold Mining Company commenced work on what has been known is known as the Hughes & Hunt prospect, and in a short time at a depth of 15 feet of work, which consisted of a cross cut in addition to an air supply tunnel, they struck a vein of ore 4 feet wide, which assays 11 ounces of gold and 1 ounce of silver. The ore is free milling, and the company is now preparing to put in a stamp mill. Gilsonville is a new camp and but in last June it was thought that ore could not be found in this section, but now it is proved that there is ore in abundance.

Rich Mother Lode Strike.

One of the richest strikes on the mother lode for some time has been made at the Mascupa mine, near Rand, in Tuolumne county, Cal. The mine joins the famous Jumper claim, and only development work has been done. At a depth of 35 feet a vein was uncovered in which free gold is large quantities are shown. A lump the size of an egg contains between $15 and $20 worth of almost pure gold. It is impossible to tell the extent of the find or estimate the amount of ore.

Make the Exhibit Permanent.

"Make it a permanent exhibit," seems to be the general cry of Utah mining men, with reference to the brilliant mineral display now seen in the Hall of Mines. In noting this the parties interested well know that it cannot remain where it is, as in all probability the hall above named will shortly become a thing of the past. Permanently fixing this obstacle it has been suggested that the display be removed to a commodious hall on Second South street, and that the stock exchange take up the abode in the same quarters, thus concentrating matters in bringing Utah mineral affairs to the front. The point seems to be well taken, and should be fostered and encouraged for all interested in the welfare of the State.

The Good in the highest grade baking powder known. Actual tests show it goes one-third further than any other brand.

ROYAL BAKING POWDER Absolutely Pure

Barnesville 100 of 43lps.
Utah, 100 to 30lp.
Rocky Mountain, 500 at $1.12½.
North Swansea, 500 at $1.10.
Total shares sold, 1,115.
Selling value of Stocks, $1,400.25.

To Develop the New Strike.

That the new strike in Mercur ground will prove a source of great satisfaction to the Barnes company, is the information thrown out by George Barnes, who returned from the mine last evening. Mr. Barnes says the vein showed a splendid showing of high-grade ore, and it is the intention to open up and develop it at once, if they are worth. To this end the company is now figuring on a surface train to be used in transporting the ore to a convenient place near the mill, so that it determine it can be kept out of the way and yet through the point with all the expedition necessary.

Golden Gate Mill Contract.

Louis Hedick, the well known builder, has secured the contract for the rock-work on the enlargement of the Golden Gate mill at Mercur, and expects to start on it just as soon as possible. The job is a big one and will require upwards of 1,000 perch of rock to complete it. It is mentioned that the work is now in the unfinished condition, and the stamps will be placed in the stamping 16 of Mr. Hedick's line. The contract has not yet been signed, but it is expected it will be pushed through with all possible dispatch.

Promising Warren Mines.

Bailey Chamberlain was out from Warren with his team this week and loaded supplies. He brought out some very smelter samples of very rich ore from the Eureka Hill claim in the mineral district, which, it is said, are worth thousands of dollars have been exploited. It was finally found by Ed. Brooks, and has been developed by Mr. Brooks. The ore ever found in that camp, which he wildly knows as a portion of the richest veins. Mr. Brooks also brought out a sample of Frank Irwin's White Mountain ore, which is fully as rich as that in the same Eureka hill. The ore of this ore noted Frank Bell at Brooks's mill.—Grangeville, Ida., Free Press.

Silver Dip.

Unknown speculations are being made for an outlook of the silver advocates in Salem on the 16th, the proceeds to go toward the expenses of the coming convention. Enclosed envelopes, good music, and an abundance of general diversion are promised. The affair will be under the auspices of the Pioneer Silver Club of Utah, organized some three years ago, and the program of entertainments will appear in a few days.

FROM DOCTOR JOSEPH PARRY.

Adjudicator of Music at the Forthcoming October Eisteddfod.

Writes the Eisteddfod Association of This City, and Makes a Number of Valuable Suggestions.

Dr. Joseph Parry is a recent communication to the Cambrian association of Salt Lake City writes as follows:

Our Welsh Eisteddfod is of great interest and historic origin. Our ancestors held in Carlegion town, south Wales, during the 5th century. I have seen quoted Blackcliffe's admirable upon a chapter of an Eisteddfod held in Caerwys, north Wales. The names of our old bardic ancestors are mentioned in the state of the place, in connection with our old Welsh tribe harp, or poetry and "Ye Eisteddfod." I feel that all our best also are as and that the composers present, something several hundred, rather possibly to assist take it. Strange to say, the very oldest stringed instrument in the "Circle" (Welsh) which is now in the British museum, London, still another strange fact, is Kilton, the great Welsh musical historian, attributes the origin of harmony to the Cymry of the ninth century. It is therefore reasonably inferred that the best artists, of all time the remarkable power and gift of the Welsh people, and hence we have the art of harmony whatever the most together, in small of large groups, and their singing rather than in the Welsh Eisteddfodau, of as many as 20,000, has now become a great feature, and they sing with a power and expression the well known tunes have Americanized.

This month the Eisteddfod has produced our great poets and prose writers our greatest orators, among whom are Rhosmarkie, Ulish Wynne, Mapel, Wynne Wynne, Hughes, Mary Davies, Mary Davies, Ben Davies, Emmanuel Daniel and all our best composers in Wales, and great speaking lessons, Gwilym Tangwystan, Ambrose, Lloyd, Owen Alaw, Owen Owen, Alaw Dafis, John Thomas, Dafydd Richards, Dr. Joseph Cridin, D. Jenkins, Dr. H. Roberts, Ben Davies, J. T. Rees, T. Price, D. C. Williams, H. J. Heather and my little boy, Joseph Joseph Harry.

I also have the honor of being a child of the Eisteddfod and this is not the place to speak of the great good Eisteddfod produces; also our scientific and literary work, our scientific and literary work, our scientific and literary work,
