MINING, BUSINESS AND STOCKS

HONORS ARE EVEN WITH LITTLE BELL

West Quincy Company Does Not Claim all the Glory for Recent Developments.

ON BONANZA FLAT OF PARK CITY

What Manager Turner Has to Say About it—Ore Shipments to Begin In Thirty Days.

The late developments in the West Quincy mine in the Bonanza Flat section of Park City continues to be the talk of mining circles. That the find applies equally to the Little Bell mine is also certain. Although many have been led to believe the strike applied to the West Quincy only.

Manager G. D. B. Turner of the latter, who returned from camp last night, when asked concerning the true situation declared that honors were even; that the interests of both companies are in common; that there is not much doubt in his mind that both will make good producing mines.

Of course, Mr. Turner is greatly elated over the turn of things. First of all, his reading of the geological conditions has been proved correct and the whole plan of development has come out just as he figured it would; except that the contact vein, between lime and quartzite formations, is deeper seated than was expected by about 200 feet.

The joint development of the Little Bell and West Quincy was begun on Dec. 1, last year and the cross-cut tunnel has been run from the Little Bell shaft, by the West Quincy company, a distance of about 2,400 feet, having penetrated West Quincy ground sometime ago. Something of a record has been made in doing this work, progress being made at the rate of 300 feet per month.

Mr. Turner explained during the day that the contact vein was first encountered in Little Bell ground, where a cross-cut was run through it and into the lime rock. The course was then deflected to the left, but later turned into the vein.

The hanging wall, Mr. Turner states, shows a body of very high grade ore in place, having no doubt as to it being the one he has been driving for. The rich streak shows a width of from one to three feet, the lowest assays gave values of 86 ounces in silver, 4 per cent lead and $2 in gold, while the highest gave 160 ounces in silver, 20 per cent lead and $2 in gold.

By Sept. 1 Mr. Truner says the vein will cross cut and considering that the hanging wall shows up so well it was believed that a large body of lead ore will be found in the quarzite foot.

The conditions of development are identical with that found in the opening of the Silver King, Daly-West and Daly-Judge.

Manager Turner feels justified in saying that ore shipments will be inaugurated within the next 30 days. Some of the ore brought down is identical in character to that found in the Quincy and Daly-West mines.

The new strike was inspected yesterday by a number of mining engineers, among the party being Sidney Bamberger, Newton Dunyon and Frank P. Swindler.

ON MINING EXCHANGE.

Columbus Con. Has Moved Up—Week's Sales Amounted to $33,210.

During the week a total of 136,591 shares of stock were sold on the mining exchange for which was paid the sum of $33,210.01.

Generally speaking the market has been uncertain, and many of the stocks called show sprinkages. Among the list being New York, Silver Shield, Uncle Sam Con. and Yankee Con. Little Bell has moved up some.

On the open board, Columbus Consolidated and Thompson have been the features. The former has been rushing ore shipments to market, and is said to have made settlements during the week to more than pay the company's indebtedness, so that a surplus has been started. Thompson has moved forward as a consequence of late developments in the West Quincy, an adjoining property.

FLOCKING TO RESERVATION.

Ruling of Interior Department Gives Prospectors a Chance.

A. B. Larsen, who has been out with a surveying party on the Uintah reservation for several weeks, has returned to the city, not very much impressed with it as an agricultural region. He says it strikes him as being a better country for stock growing. The mineral posibilities of the country, he believes, are great and that there are good reasons to believe some good mines will be opened up there.

On the way out Mr. Larsen and party met a great many going into the reservation for no other purpose than to prospect for the ore bearing ledges. There are no doubt hundreds who registered their names at Provo and elsewhere who did so with no intention of making a homestead entry; but only to get permission to go onto the reservation in advance of the opening day.

The ruling made by the interior department at Washington, D. C., has settled the question as to the right of prospectors to enter the forest reserve. It is held that mineral locations can now be made on this portion of the reservation, but that on other portions of it no locations are permissable until after the expiration of 60 days from the date of the opening, the 28th inst. So, with the exception of the forest reserve, no valid locations can be made for mineral on any of the Uintah lands until the last of next October.

MR. HIKES IN IDAHO.

Tantalum Has Been Found in Sands of Snake River.

Victor C. Hikes, of the geological survey, who has been making examinations of the placer gravels through the west with the view of determining if rare metals were likely to be found in them, was in Boise one day this week, says the Statesman. He brought the interesting information that tantalum has been found in sands from Snake river and in some secured in the Pierce district. This metal is coming into extensive use in electrical work.

Mr. Hikes is making arrangements for the shipment of several large samples of Snake river gravel to the government testing plant at the Portland exposition. These will be of several tons each. Some will come from the eastern part of the state and some from this locality.

In speaking of the work of the plant, Mr. Hikes said it had been of much value to Oregon miners. Representatives of the government, in looking for sands or concentrates, had frequently been told to take whatever they wished of black sand dumps—material that had been concentrated and put through the process of amalgamation for extraction of the gold. Taking such sand to the plant, the government operators had found much free gold remaining in many instances, and in some cases nice bricks had been sent the miners from whom the sands had been secured. In addition, in a number of instances valuable metals had been found in such sands the presence of which had not been suspected by the claim owners.

THE OLINGHOUSE FIGHT.

Mine Owners of Nevada District Will Fight the S. P. Company.

The mine owners of the Olinghouse, Nev., district are organizing to make a vigorous fight against Southern Pacific Railroad company which claims to be the owner of the ground on which some of the principal mining properties of the Olinghouse district are located.

One of the most prominent attorneys in Nevada gives it as his opinion the whole matter has narrowed itself down to a question of fact.

"I believe," said he in a recent interview, "that if it is established that prior to the issuance of the patent to the railroad that that ground was known to be mineral ground the patent will be annulled. The question has been ruled on several times. A similar case went to the supreme court of the United States from Montana, and the court held that when grants were made to the railroad it was the intent of Congress, in order that the resources of the country might be properly developed, that the minerals that were in the granted area should be left open for the explorer and prospector. In the final opinion on the case this question of fact, as to whether or not at the time of the issuance of the patent the ground was known to be mineral, was the determining feature."

TINTIC ORE SHIPMENTS.

Mines of Juab County Send Out 113 Car Loads This Week.

Special Correspondence.

Eureka, Aug. 19.—The ore shipments from the Tintic district for the past week amounted to 113 carloads. The shippers were:

Total	113

HARRINGTON & HICKORY.

Manager Hanchett Says it is an Important Strike.

Manager Hanchett of the Newhouse mines came in from Beaver county this morning, and confirms the report of an important strike in the Harrington & Hickory mine, belonging to the Majestic Copper company. The ore was encountered in the lower shaft at a depth of 450 feet; the vein is in place, is from 5 to 7 feet wide, and carries lead values of about 40 per cent. The character of the ore is largely sand carbonate.

AMERICAN IN COLORADO.

What Its Big Smelting Plants Are Doing in That State.

An official of the American Smelting and Refining company in speaking of the smelting facilities of that corporation in the Centennial state says that the present furnace capacity in Denver, Leadville, Pueblo and Durango is fully equal to the supply of ores from the Colorado mines. The latter is augmented by certain ores from the Coeur d'Alenes, British Columbia, New Mexico, Mexico, Arizona, and even Chile, South America, which are desirable for use in the smelting mixtures. In the opinion of this official the Leadville and San Juan district will be the first to call for increased capacity.

Two years ago the plant at Leadville, known as the Arkansas Valley smelter, was raised to a capacity of 1,300 tons per day, while the new power and light plant put in at the Durango smelter has three times the capacity of its predecessor. The furnace capacity was at that time increased 100 per cent, and has been fully employed since the settlement of the labor troubles.

AN AID TO PROSPECTORS.

Dangers of Traversing the Deserts Being Lessened.

Nevada is not the only state that has taken steps to lessen danger to prospectors and others crossing the deserts by the erection of sign boards directing the way to various points as well as serving as a guidance to watering places. California has made a move in the same direction. The last legislature appropriated $5,000 to be applied in the expense of erecting metallic sign boards and improving wells and water holes in Kern, Ventura, Los Angeles, Inyo, Riverside, San Bernardino and San Diego counties.

In the southern Nevada deserts work of this kind is being inaugurated much to the satisfaction of travelers in that region.

Strike in Carbonate Hill.

Special Correspondence.

Morgan, Utah, Aug. 19.—It is reported that the Carbonate Hill Mining Co. has struck a large and rich body of ore in Cottonwood canyon, and that a car load of ore a day can be shipped from now on.

Tyng Buys Property.

Special Correspondence.

Provo, Aug. 19.—Francis Tyng of American Fork, has purchased from Trusten Hart of Freno, Cal., the interest owned by the latter in the Texan claim in American Fork canyon. The consideration named is $25.

CONCENTRATES.

Attorney Charles Parsons of the Newhouse mines departed for the Revenue property in Montana today.

M. M. Johnson of the Newhouse staff departed for the Montreal and Boston property in British Columbia today.

C. A. Gaines, in charge of the electrical department of the Columbus Con. Mining company, is in the city today.

Manager N. Treweek of the Wabash mine at Park City is giving his personal attention to the development of that proposition.

Samuel Newhouse departed today for British Columbia, to be present at the coming directors' meeting of the Montreal & Boston company, which will be held at Nelson.

Harry H. Olmstead, the Montana mining engineer, has arrived in the city and was a caller at the offices of Samuel Newhouse during the day.

The Ophir Hill mill at Ophir is being enlarged. It is said the capacity of the plant will be doubled. A residence is also being built for Manager E. W. Clark.

W. C. Thomas of the Newhouse staff departed last night for the Montreal and Boston property in British Columbia, upon which Mr. Newhouse now holds an option.

The ore and bullion settlements reported late yesterday by Mr. McCornick & Co., were as follows: Crude ore and concentrates, $25,700; base bullion, 39,790; gold bullion, $6,400.

The recent strike in the Odin property at Park City continues to improve with development. The vein encountered there is about 18 inches wide and carries values averaging 18 per cent lead and 80 ounces in silver.

A consolidation of the Holland and Deer Park properties in the Gold Mountain district has been effected. The negotiations, which ended last evening, have been in progress for some time. In the amalgamation the name of Holland will be retained.

The development of the Confidence group of claims in San Bernardino county, California, which was bonded sometime ago, by the Johnny Gold Mining company, which formerly operated in Silverlode, is said to be going along satisfactorily.

EVOLUTION IN BUILDING MATERIAL.

The Utah Cement Products Company are making a concrete stone from cement, fine silica sand, and pea gravel, which is a most excellent article. These blocks are made with a fine dense sand face fully as hard and impervious to moisture as the best sandstone or limestone. This face is backed up by a concrete of pea gravel, sand and cement, making the strongest and toughest block possible. It is a well known fact that concrete properly made is much stronger than brick or building stone. In addition to the above qualifications, these blocks have air spaces continuous throughout the walls, making a strong, light, dry wall, cool in summer, warm in winter, and thoroughly sanitary. These blocks are now being displayed at Langton Lime & Cement Co., 34 south State, and also at 15 west 2nd South St.

The story and a half cottage for Mr. Owen on J St. between 2nd and 3rd will be built of concrete blocks made by the Portland Cement Co. of Utah.

BUSINESS NOTES.

A plentiful supply of money at all the banks, and a scarcity of sellers combined to keep the local list of stocks in the ascending scale during the week. Idaho Sugar continued the favorite with the investing public, the reports from the best fields contiguous to all three of the company's factories indicating that a wonderful sugar record may be relied on. The stock books of the company re-opened yesterday and many transfers were made, the ruling price being $13.10, with advancing tendencies. Utah common rallied somewhat and there were quite a number of transfers. There was an eager quest to "get in on the ground floor" at the organization of the new Sanpete and Sevier Sugar company, but the stock is held in fewer hands than in the case of any of the other sugar companies organized here. All the stock of the Consolidated Wagon & Machine company allotted present owners has been spoken for, and the entire $190,000 will be paid into the company's treasury on or before the 31st. The Idaho Sugar company announces the sale to the highest bidder of 160 shares of stock remaining in its treasury; with this issued, the capital will be an even $3,000,000. THE FUTILE ARGUMENT.

"Prof. Barrett Wendell of Harvard," said a Philadelphia lawyer, "has a strong feeling against the harsh and overbearing cross-examinations that are sometimes permitted in law courts, and it delights him to see a witness turn the tables on a cross-examining lawyer—indeed, it always delights him to see a lawyer get a setback.

"Laughing a little, Prof. Wendell told me one day how he had attended a session of court where an aged man had been placed in the witness box.

"The examination of this man was finished quickly. Then, in this way, the cross-examination began:

"'You know John Thompson, do you?'

"'Yes sir. I've known him 20 years.'

"'Never mind how long you've known him. We don't care anything about that here. Just answer my questions without any additions of your own. That will keep you quite busy enough, I think.'

"'Very well, sir.'

"'Very well. Now, witness, do you remember the afternoon of March 4th?'

"'March 4th last?'

"'March 4th last! If I had meant March 4th, 1807, or March 4th, 60 B. C., I'd have said so. March 4th last, of course. Do you remember that date?'

"'I think I do, sir.'

"'You think you do? Don't you know you do?'

"'Yes, I know I do.'

"'On that afternoon did you call on John Thompson?'

"'Yes, sir.'

"'What did he say?'

"'I object. I object. Your Honor, I——'

"The opposing lawyer had arisen. In a frenzy of rage and indignation he was objecting. The other lawyer sneered at him.

"'You object?' he said. 'Why, Your Honor, it is perfectly clear and plain—and I know Your Honor will bear me out in this——' and so forth.

"Now, for an hour, the lawyers argued. They quoted from a dozen law books. They stormed and raged. According to the one, it had for 200 years been the custom to allow witnesses to answer questions similar to 'What did he say?' and according to the other, such questions had from the beginning of legal history been ruled out as irrelevant and incompetent.

"Finally the judge decided in favor of the cross-examining lawyer. He, flushed and triumphant, then took up the witness again.

"'Now, witness,' he began, 'when, on the afternoon of March 4th last, you called to see John Thompson, what did he say?'

"The witness, with a little smile, replied:

"'He wasn't at home.'"

WHEN EDITING WAS FUN.

An aged Hartford man was talking about the late Gen. Joseph R. Hawley.

"I remember well," he said, "the time when Gen. Hawley was an editor in this town. I remember a story about editing that he told at a banquet 50 years ago.

"The man who introduced Gen. Hawley began by saying that editors were always up to mischief of one kind or another. He said there was a Hartford man who once went to a Hartford editor and said indignantly:

"'What do you mean, you scoundrel, by printing my name in your obituary column this morning?'

"'Why,' said the editor, 'aren't you dead? I thought you were dead, of course. Don't you remember promising me last week that if you lived till yesterday, you would settle that account of mine?'

"It is hard to get the best of an editor," continued the Hartford man. "When Gen. Hawley rose at the banquet he told about a newspaper friend of his who actually, in good faith, printed an obituary of a man who was still alive.

"This man, the next morning, rushed into the editor's office and shouted.

"'How dare you print this obituary of me, sir. Don't you know I'm not dead?'

"'I'm very sorry,' said the editor.

"'Sorry? Well, you'd better be. The notice of my death is false, and if you don't retract tomorrow, I'll horsewhip you within an inch of your life.'

"This is the contradiction that the editor printed the next morning:

"'We regret to announce that the paragraph which stated that John Smith was dead is without foundation.'"

Those Who Draw Lucky Numbers.

Get your homestead locations along running streams of flying water. Don't miss this only chance! A limited number only, and "First come—First Served," at L. B. Lyman's office in Vernal, where filing papers are made.

TACTLESS INDEED.

Miss Helen Miller Gould was addressing a class of young ladies on the subject of tact.

"What," said Miss Gould, "is more unpleasant, more annoying, than tactlessness? Let me tell you about a supremely tactless man.

"This man went with his wife to a dinner party. He took down to dinner a very charming woman, but the first course had hardly begun when, to his wife's dismay, he jumped up from his seat beside the lady, and making a circuit of the table, took a vacant chair beside a young matron.

"After the dinner, as the man's wife entered her carriage to drive home, she said impatiently:

"'I have been dying all the evening to ask you why, after taking her down to dinner, you deserted Mrs. A. for Mrs. B.'

"'Why,' said the husband, 'with my back to that fire I'd have caught my death.'

"'Well,' said the wife, 'I hope you told Mrs. A. that.'

"'No,' said the husband, 'I didn't. I told Mrs. B., though.'"
