FRUITS AND FLOWERS AT THE FAIR.

The Horticultural Display at the Exposition will surpass all Previous ones, and Will be Beautiful Beyond Description.

The horticultural display at the World's Fair will be bewildering in extent and marvelous in beauty. The exhibit will possess great scientific and educational value, but to the ordinary visitor its ornamental features will be the most striking. Indeed, it will play an important part in the adornment of the great Exposition. While in almost every part of the Exposition grounds may be seen gratifying evidence of the very efficient work of the Horticultural department, its central point of interest will naturally be in the exhibit in the Horticultural building. This structure is one hundred and ninety-eight feet long and has an extreme width of two hundred and fifty feet. Its plan is a central pavilion with two end pavilions, each connected with front and rear curtains, forming two interior courts, each eighty-eight by two hundred and seventy feet. Surrounding the central pavilion is a beautifully proportioned dome, one hundred and eighty-seven feet in diameter and one hundred and thirteen feet high.

In the south pavilion of the building will be installed the viticultural exhibit, embracing all varieties of wine and everything pertaining to the industry. As an idea of how complete this part of the exhibit will be can be gained from the fact that applications for space have already been received from 100 different foreign countries. Firm about the exhibits of France, Germany, Spain and Italy will be especially notable. A fine exhibit of Chilean wine, raisins, nuts, for their superior quality, will be made. California will make a splendid display, all of the great firms being exhibitors and being applied for much more space than can possibly be allowed them. If permits on, which has been asked, be given, Leland Stanford will exhibit a wine fountain. This, as Japanese, will throw, for two hours each morning and afternoon, graceful streams of wine to the height of 35 feet.

In one rear curtain of the building will be shown the fruit exhibit, which will include all varieties grown in any part of the world. As far as it is possible to do so, probably in a great variety of cases, fine specimens of the natural fruit will be shown; otherwise wax models, so perfect in appearance as to be indistinguishable from the real fruit, will be substituted. For this exhibit about 44,000 square feet, or more than an entire acre of space, is assigned. A very complete and splendid exhibit of citrus and other fruits and to seat from California, Florida, Mexico and South American countries. By means of refrigerator cars and cars in cold long distances without injury, and other rendering the fruit and storage facilities will be available to keep it in perfect condition.

The exhibit in the important line of floriculture will be exceptionally extensive and the preparation of it is so advanced. Unless this were the case the exhibit could not well be a success, for time is required for the plants to overcome the shock received in being transplanted. More than 500,000 transplanted shrubs and plants, of many species, are growing in the experimental gardens, and the former is rapidly increasing. The department sent circulars to prominent horticulturists and horticultural societies in all parts of the world, requesting the notice of plants, and agreeing to pay all the same and address of the donors to appear in connection with such specimens as they might send. The result is that thousands of plants—excellent specimens, too—have been forwarded. Among them are more than 50,000 rare rose plants, which have been donated by firms all the way from California to Hungary.

The horticultural exhibit will not be confined to the rear plans. In the front curtains of the building will appear the greenhouses and hothouses plants—a very large variety and many rare and beautiful specimens. There, too, will be the finest display of orchids ever seen in this country, if not in the world. One firm alone will spend $10,000 on its orchid exhibit. At the opening of the fair, Chief Ramsey says, there will be a display of 2000 different varieties of orchids, embracing fully 15,000 specimens. Beneath the great dome will be the largest tropical plants obtainable, including Japanese and Chinese bamboos 75 to 80 feet high, palms 50 to 60 feet high, and tree ferns 10 feet or more in height. There will also be a miniature jungle in which will be tropical plants, and in a cave within will be tried the experiments of growing plants with electric light and of growing them by the aid of electric current, passed through the soil, both of which, it is claimed, have been accomplished with remarkable results.

The two courts of the horticultural building will be filled with orange groves from California and Florida, respectively. In each there will be not less than 150 trees, each bearing about 200 bright, ripe oranges. Thus an interesting comparison may be made between the oranges of the two States as to size and flavor, etc. The courts will also contain growing specimens of lemons, limes, bananas, etc. California would like to make a much larger display than this will be possible, and applied for about fifty times as much space as could be assigned. It will occupy an acre on Midway Plaisance with a citrus exhibit. On the Plaisance, too, five acres will be devoted to a nursery exhibit, and Wisconsin will show there a cranberry marsh.

His acres in front of the Horticultural building will be devoted to the horticultural exhibit, as will also space about many of the larger buildings.

The "Wooded Island," or as more properly named, perhaps, the flowery island, will be one of the most beautiful and attractive spots at the Exposition. Hundreds of acres will be given over almost entirely to the Horticultural department for its exhibits. There, literally speaking, will be acres and acres of flowers of brightest and most varied hues and pleasing perfumes. Little groves of trees, clumps of rhododendrons and azaleas will relieve the gorgeous monotony of this floral display. On the north end of the island flowers will build its strange, unique temple and, surround it with the choicest plants and flowers of the island realm of the Moslem. A serpentine form of the winding walks which thread this delightful domain of the flowers the visitor will encounter artistic little structures of the summer house description, within which one may sit, himself and his lady fair and beauty and perfume. Many of these retreats—arbors of eighteen in number—will have thousand to 5 and be covered with growing vines, and somewhat ornamentation in keeping with their beautiful surroundings.

In the south pavilion of the Horticultural building will be a very extensive display of vegetables, canned goods, horticultural appliances, etc. In the second story of each pavilion will be a restaurant capable of seating about 200, and profusely adorned with brass, flowers and cactus plants. Outside will be a number of greenhouses, where visitors may see an exceedingly complete collection of tropical vegetation. There will also be large auxiliary greenhouses, not open to the general public, where plants will be brought to perfect exhibit condition, and where plants will be cared for after their beauty season has passed.

It may be safely asserted that the horticultural exhibit at the exposition will be the most extensive and extensive ever made or attempted. It is certain to attract a great deal of attention and prove to be of great scientific and educational interest. It will have important features not specified here, as, for example, a very complete collection of insects, both the injurious and the beneficial ones, whose ravages affect the fruits and other products of the horticultural. It is the intention to have in one place as exhibit of all of the species of plants mentioned in the Bible, and in others collections of aboriginal, medicinal interest.

Both Chief Ramsey, who has general charge of the horticultural department, and Chief Thorp, who looks after the floricultural division of the exhibit, have proved themselves to be the right men in their respective positions, and it is already assured that the display which, with the active assistance and of horticulturists the world over, they will furnish, will be long and pleasantly remembered by every one who visits the World's Fair.

Live Stock Points.

A dispatch to a New York newspaper states in the most solemn manner that Mr. E. E. Eldemain, "a well known and reputable builder" near Lancaster, Pa., is the owner of a bovine tenor. This marvelous bull has been quarantined carefully watched and found to lay regularly two eggs a day. He did not cackle over them, however, in the proper way, but showed his power. Externally he bears every mark of a cow, centrally in the barnyard and watches intent for his hens like any other male fowl. Yet "The bull the old specimen of the Hyena" the cow that used to lay two eggs a day and hatches the last three.

Sulphur fumes are perhaps the best disinfectant and destroyer of contagion for horses. One way to test a live bull is to shut up in a tight stable, if with a mouse and then empty it. It for two hours. Sulphur fumes will destroy any living germ.

Grain or mixed blood stock when crossed with native animals will not produce offspring of the quality of the mixed breed to sell cows. The idea is that is the greater is the certainty that it will increase food qualities.

The Cattle Ranch Specialty [illegible] is a ranch devoted to the raising of [illegible] cattle.

Large, stylish specimen and [illegible] breed dogs are in demand now in [illegible].

The Cotton of Sea Grass.

In the West Indian island of New Providence there is a new and important industry in the cultivation of sea grass, which is equal to manilla hemp for making rope and twine. The fiber plant, which was formerly regarded as a useless weed, requires five years to reach maturity, and beds of thousands of acres of land of New Providence are now devoted to its growth.—Philadelphia Ledger.

A Knotty Kiss.

First Boy—What does my kiddie dress in the grounds that way for?

Second Boy—Hush! Don't you know! He's trying to get back to you so you'll put on more tail—Good News.

Daniel Webster Was a Stock Concessioner.

Daniel Webster paid his second term's tuition at Dartmouth by buying "De Tocqueville's America" in Merrimack county, N. H.

A Famous French Chef

says wrote: "The very soul of cooking is the stock-pot, and the finest stock-pot is

MONEY FOR LAND.
MANY PERSONS WISH TO SELL THEIR lands, but when they find a willing purchaser, the title to the land is not perfected owing to the parent entry being lost misplaced. Thus the parties wishing to sell to a place being and have that the patent shall be secured in such a case, which cannot always be done. Why not let us get your title through now and send you the patent as soon as issued? Anything you have to sell or to the number of land entry, and the address where you wish me to send the patent, I will attend to it promptly for you. Address: CHAS. W. STATON, Attorney at Law, Box 414, Washington, D. C.
