

show conclusively that some very fact bodies of copper ore have been uncov-ered. Mr. Mucklow was not inclined to give out the results of the assays for publication, for the reason, he said, that some people might carry the story that it was done for the purpose of creating a boom for the stock, which was far from being the case. Finally, however, he was persuaded to release what appears to be some very important information. phenominal strikes have been made in the O. K. mine. While the as-say sheets show values as great as 75 per cent in a streak of black oxide of copper and as much as 65 per cent in another phat streak of red oxide of copper-and there seems to be quite large deposits of each-Mr. Mucklow characterizes the developments made in a cross-cut run to the west in what is known as the west drift of the 300 level. as being the most important of all. Here was encountered a large vein of gray quartz in place which seems to have escaped the percolating effects of the waters of ages. The vein has been drifted on for about 130 feet, and a cross cut run for a distance of 20 feet without any visa-ble signs of the opposite wall. The low-est assay obtained from this vein, Mr. Mucklow states, was 16 per cent cop-per, 80 cents in gold and 2.5 ounces in silver. The black copper streak, re-ferred to, was encountered on the 200 hypei, and on the same level, within a short distance from the famous Whis-kers cave, a fine breast of ore is ex-posed in a drift showing 12 per cent, average, copper ore, A winze sunk from the 40 level to the depth of 45 feet has encountered the sulphide zone. Assays of ore taken from the winze show 4 per cent copper, 15 per cent iron, and \$3 in gold and silver In the old Hickory the campaign has been carried on with less vigor, yet results have been obtained. Here a breast of ore is exposed and an average of nine assays taken showed i cent copper values. The shaft is being sunk deeper and it has been decided ing. to send it down to the 400-foot point without stopping to do any cross-cut-ting. It is now down 276 feet, and has passed through a body of red oxide: containing very fair values. At the Harrington and Hickory the changes made since operations were resumed there have been decidedly deasing. Connections have been max etween the Gomer shaft and the old workings through a drift on the veh for 340 feet. Cross cuts on the veh-show it to have a width of about 36 feet and D. P. Rohlfing, the company's consulting engineer, estimates that there are 100,600 tone of ore available r concentration immediately, and Mr Robling has the reputation of being very conservative in his statements. Mr. Mucklow says this ore will run about 14 per cent in lead, s ownees in silver and 80 cents in gold. For the purpose of demonstrating in the stockholders of the company just what there is in the mine President Mucklow instructed Supt. Freudenthal to make a shipment of six cars of ore, the product to come from the three pro perties mentioned, each to contribute londs. Mr. Mucklow will return to camp againt tonight for a few days' stay after which he will return to the head offices of the company to give his attention the bond issue recently authorized. He will be accompanied to the mines, this evening by Louis S. Coates, of Boston, one of the officials of the Bos-ton Con., Mining company. There is not the slightest doubt that the Majestic mines are in better physical condition than ever before and that with the careful management it now has ought to soon be making

CACTUS PEAK CAMP.

New Nevada District Attracts Attention In Tonopah.

There has been great excitement in Tonopah and Goldfield during the past week over the reports from the new district about 20 miles southeast of Caetus Peak and 55 miles south cast of Cactus reak and so miles source cast of Tenopah, says the Tonopah Miner. The original discovery was made by H. C. Trappman and his part-ner about five months ago. Thappman reported his discovery to J. P. Me-Closkey and associates of Tonopah early in August, and these parties went to the new district and staked a barg to the new district and staked a large number of claims. Mr. McCloskey made a second trip about 10 days ago

THE GARRETSON FURNACE. It Will Take Two Months-One at Yam

pa Smelter. It will take about two months to in stall the new Garretson furnace, de-cided upon by the management of the

Yampa smelter at Bingham sometime ago. Little is known about this fur-nace in these parts and the one to go in at the Yampa is the first one of the kind to be built in this state, conse-quently its behavior will be watched with considerable interest by local smelting men

General Manager Walter S. Kelley, of the Yampa company, has great faith in the Garretson furnace and believes it will come fully up to expectations when tried oue with the ores of Bingham. He fully anticipates that his company will be able to produce a much high grade matte with it in commission than is possible under the present equipment, which, of course will made a difference in cost of smelt-

AT CON. MERCUR.

September Tonnage Will Exceed That of Month of August.

Manager George H. Dern of the Conclidated Mercur mines came in from amp last night and will remain ir the city until Saturday morning. Dern expressed himself today as being well pleased with the way things are moving at the mill and says the Septonnage handled will exceed omber that of August by considerable, provid-ed nothing happens to prevent it. Last month an average of 600 tons a day was maintained. The ore coming from to mine runs a little better than \$4 to thes ton while the tailings have been kept down to \$5 cents. The cost of exfaction is being brought down to a inimum and the company is making

cated a mine which they named the Wellington." Just why they not call Wellington. it the St. Patrick is not known, all events it was named after the Duke of Wellington, whose birthday happens

to fall on the same day with that of Ireland's patron saint. Then McAuley and Benoish went off and had a row and the party split up. Young Kearney, then familiarly known as "Billy" and Benorst continued prospecting and on April 12 found the "old

Dominion" just two months and ten days after his leaving New York. the 24th of May they had a carload of ore consisting of 1612 tons on the read, The cost of hauling by wagon to Spo-kane, a distance of 90 miles, was \$14 per ton and the freight and treatment charges at the Selby smelting works in

San Francisco was \$23 more and yet after deducting all these heavy expenses the carload of ore netted its owners \$3,600. The mine was found six miles from old Fort Colville and 60 miles from the British line. The ore onsisted of black sulphernets carrying high values in silver and lead. Mr Kearney and his brother purchased Benoish's interest and worked the prorerty from 1885 to 1889, during which time they took out over \$150,000, and all they had on the ground was a blacksmith shop, boarding house and wind-

The property was subsequently incorporated, a concentrator put up and air drills put in the mine and then sold to Ferdinand W, and Clarence Peck of Chicago for \$166,000. He purchased all the properties in the vicinity, consisting of 52 claims. It was operated on a large scale until the price of silver and lead declined, since which time it has been worked only intermittently

The discovery of the "Old Dominion" gave a great impetus to mining in Eastern Washington and British Columbia and led to the discoveries subsequently made in the Okouagan, at and at Nelson and Trail Republic Creek, B, C., many of the prospectors who found mines in those districts having received not only their experi-ence but their "grub-stakes" at the "Old Dominion." It also had much to do with the up-building of Spokane, and laid the foundation for the fortunes possessed by many of its inhabitants During the past 20 years Mr. Kear-

ney has gained large experience in nining and been interested in a number of important deals. He is at present investigating some properties in Utah in the interest of himself and associates in Chicago where he now resides. He has never been able to settle clearly in his mind whether it was blind luck or destiny which caused him

to strike the first pick into the "Old Dominion.

Them \$17,000. Special Correspondence,

Ogden, Sept. 8 .- The Ogden-Gold. field Mining company, which is composed entirely of local people, and who have a 14 months' lease on part of the Jumbo claim, received the returns yesterday from a car load of ore shipped to the Salt Lake smelters,

which netted just \$8,710. The company has shipped three car loads, altogether which have netted them over \$17,000. The company ex-pects to increase the force of men during the next few weeks. Those interested feel very much elated over their present prospects.

The Sandstorm Strike.

A correspondent of the Tonopah Miner says of the late Sandstorm strike at Goldfield. One of the most sensational strikes that has ever occurred in the Goldfield listrict was reported this afternoon, after the foregoing mining news was written. The strike was made last Sunday in the second lease of T. L. Oddle and Major Gardner on the Sand-A 6-foot ledge has been unstorm.

access he has achieved in the great camp on the north. From Goldfield, Nev., word comes

that Dr. Frances E. Williams has bonded four claims to Doheny, Forrester & ahrenkamp, the Los Augeles oil oper afors, for \$80,000, and leaved the August laim, adjoining the Combination, Dr. Williams also the same parties. bonded a three-quarter interest in the Bonanza claim to John E. Lutz, the San Francisco capitalist, for \$20,000,

IRON MARKET.

Cut in Prices a Feature of Last Week's Operations.

Cleveland, Ohio, Sept. 8 .- Relating to the condition of the iron market at large, the Iron Trade Review this week SRYS

"The uncertainty that for weeks has been an embargo on business in finished steel has been broken by the action of the beam and plate pools on Tuesday. On plates above 24 inches in width the reduction is \$4 a ton or to 40c Pittsburg and on narraw plates \$6 a ton. Beams and channels are reduced to 140c Pittsburg, or the lowest price that has prevailed in four years. is understood that arrangements have been made that will prevent the cutting of prices on fitted material that has been much complained of by certain members of the beam pool in connection with contracts taken in the past

ew months. The co-operation of the Lackawanna Steel company is understood to have been secured, at least to the extent of makintaking prices. Another reduction of the week was in wrought pipe, the leading interest taking the initiative and the cuts running from \$1 to \$4 a ton. Competition has increased in this line, some of it fortified in steel and pig iron. Under the re-adjustment mills buying their wn skelp have a very narrow margin

to work on. Important business of the week can be readily summarized. Rail buying amounted with the leading producer to 20,000 tons of standard sections, half of which is for a new line in the far Pittsburg notes a 2,000 ton plate order for vessel work and a 3,000 ton in-quiry for shapes for a New York elevator. The American Bridge com-pany's new business in August was between 40,000 and 50,000 tons, a con-

siderable improvement upon July, Foundry pig iron is quieter and somewhat weaker. Southern produc-tion has decreased because of the coal strike, and the settlement of the latter may be long delayed. There is more southern iron, but northern furnaces continue to take more of the business. The starting up of steel corweek brings the total to 15 additions to the active list in about a fortnight. Foundry operations do not show any distinct improvement on the whole, but in some centers more men are reported at work in machine shops.

LOCAL MARKETS.

In the local markets today, there is fall noted of 10 cents on the wholeale price of oats. In fruits and vege. ables, Damson plums are in the market at 40 cents per peck, cauliflower is up five cents, oranges are falling, and so are watermelons. Pears are cheap, but as the crop is ripening all at once, and is disposed of in the same way, and is disposed of in the same way, local marketmen say there will be a stiffening of prices next week, as the fruit will begin to thin out then, when prices will go up to \$1.50 per bushel and 40 cens per peck. Egg plant and green tomatoes are in the market at reason-able prices. There are no more crabs, as the coast season is now closed, and black bass are scarce owing to unfa-vorable conditions for fishing at Utah lake. The prices obtaining on Market Row today are as follows:
