LEEDS.

Irrigating Problems-Utility of Win-

ter Irrigation Proved.

Leeds, Washington Co., June 13 .-

Notwithstanding occasional copious rains have seemingly "broken" the

drouth, we are still very short of

vater. As the two last winters have

been exceptionally dry, subsoil evapor-

ation is all exhausted, both irriga-

tion and rain has but a very brief and

limited effect. Those who have per-sistently irrigated during the winter re-

ceive now returns from their labor in

the more durable effect of their present

rrigation. But where water runs a

ong distance in a small ditch as is the

case at Harrisburg the evaporation and

seepage drinks it all up; exhibiting a

ractical object lesson on the necessity if using a small stream as near as pos-

sible to its source. This is the second summer of a suspension of irrigation

water at that place, and hopes are en-

tertained that the owners of the stream

may see it to their advantage to place

their water where they will not lose it

all in a dry time, when most needed,

The same measurement of water which runs towards Harrisburg, when used

at Leeds with moderate care covers the acreage for which it is measured,

while of course the stream is much be-
