

Make Us an Offer ON ANY PIECE OF Furniture, Carpet, Stoves and Ranges IN THE Store

The present flurry in the Eastern money market has made it necessary for a number of the largest manufacturers to unload a large amount of goods at ridiculously low prices. We want to avail ourselves of this opportunity to buy at factory cost, and to do so we have decided to reduce our now very large stock of \$60,000 worth of carpet and our furniture stock of over \$120,000, and this must be done at once regardless of cost or profit. Come in and examine our stock and make us an offer. No deal is too large and no deal is too small. REDUCTION IN EVERY DEPARTMENT.

EVENING SKY MAP FOR NOVEMBER

NOV. MOON PHASES.
NEW MOON Nov. 5.
FIRST QTR. Nov. 12.
FULL MOON Nov. 19.
LAST QTR. Nov. 27.

FACE SOUTH AND HOLD THE MAP OVER YOUR HEAD-THE TOP NORTH-AND YOU WILL SEE THE STARS AND PLANETS JUST AS THEY APPEAR IN THE HEAVENS.

THE ARROW THROUGH THE TWO STARS IN THE BOWL OF THE BIG DIPPER POINTS TO THE NORTH STAR, THE STAR AT THE END OF THE HANDLE OF THE LITTLE DIPPER.

passing between the sun and the earth. It is so situated that a line from the earth to the sun touches Mercury also. This occurs at longer or shorter intervals, and always in May or November. The next transit will be in 1914, after that none until 1924, but almost immediately following will come a third in 1927. This apparent irregularity is due to the relations between the motions of Mercury and the earth in their orbits. A transit of Mercury is an interesting sight with a telescope, but it possesses relatively little importance astronomically except as it throws more light upon the motions of Mercury, which appear to be slightly affected by some unknown cause of disturbance.

There is an evening star this month, but too close to the sun to be observed. During the coming winter she will gradually become a conspicuous and beautiful object in the sunset sky. Jupiter rises about 11:30 o'clock on the 1st of November and 9:30 on the 30th. He is now in the constellation Cancer.

THE STARS AND CONSTELLATIONS.
Overhead in November reigns Andromeda, the heroine of the ancient mythological story of the royal house of Ethiopia, to which reference has been made in these articles. Andromeda can easily be recognized by means of a few of conspicuous stars of the second magnitude, beginning with the northeastern corner of the great Square of Pegasus and extending off to near the edge of the Milky Way, northeast of the south.

Between Andromeda and the pole star appears Cassiopeia, who in the legend was Andromeda's royal mother, and whose constellation is clearly marked out by a six-armed star bearing some resemblance to the letter "W." The story relates that it was Cassiopeia's vanity, leading her to boast that her beauty exceeded that of the sea nymphs, which resulted in her daughter being chained to a rock on the sea coast to be devoured by a sea monster. Below the last star in Andromeda, in the southeast, and striding across the Milky Way, appears the hero Perseus, who rescued the maiden by turning the monster into stone by the aid of the gorgon Medusa's head which he had cut off. The stars of Perseus form a hand, and follow the curve of the Milky Way.

But the period is irregular. On the average 31 days elapse from one maximum to the next, but the maximum may come a fortnight ahead of time or a fortnight behind. The brightness of the star at maximum is also irregular. Last December Mira had an extraordinary degree of brilliancy, rather exceeding the second magnitude. But generally it is only of the fourth magnitude, when at maximum. At minimum it disappears entirely for the naked eye, sinking to the eighth or ninth magnitude. It is probable that the variability of Mira arises from an entirely different cause than that concerned in the case of Algol. Instead of being due to eclipses, the variations of Mira's light no doubt originate from some change in the constitution of the star itself.

November is the great month for meteors, two famous showers falling within its limits. The first of these is the shower of the Leonids, so called because the meteors radiate from the head of the lion in the constellation Leo. They are due on the 17th and 18th, and to see them one must not rise in the early morning hours, as Leo does not rise before midnight.

These meteors were wonderfully numerous in 1833 and 1866, but since then they have not been seen in such vast numbers. It has been shown that the planets Jupiter and Saturn have drawn most of them away from the orbit, which they formerly pursued.

The other meteor shower is that of the Andromedids, due on the night of the 13th. The first of these is the shower of the Leonids, and are associated with Andromeda, which disappeared in the first half of the nineteenth century.

the winter sky so magnificent to now beginning to appear. Near the eastern horizon Orion is just rising above him to Taurus, and still higher the Pleiades in the northeast below Perseus glimmers the brilliant Capella in the constellation Auriga. The const. Ursa is under the pole in the north, and Vega scintillates in the northwest, a worthy rival of Capella in the northeast.

ALWAYS WAS SICK.
When a man says he always was sick—troubled with a cough that lasted all winter—that would you think it he would say he never was sick since getting Ballard's Horehound Syrup. Such a man exists. Mr. J. C. Clark, Denver, Colorado, writes: "Four years I was troubled with a severe cough that would last all winter. This cough left me in a miserable condition. I tried Ballard's Horehound Syrup and have not had a sick day since. That's what it did for me." Sold by J. C. Clark, 112 West 14th Street, Denver.

Wanted Quick Action.
A group of New York brokers were talking about John W. Gates' rooms in the new Plaza hotel, rooms for which he pays \$4,000 a year. "Well," said an elderly bachelor, "if Mr. Gates' business had all been conducted with women, as so much of mine is, he wouldn't be living in such rooms as those."

STOP WOMAN AND CONSIDER

First, that almost every operation in our hospitals, performed upon women, becomes necessary because of neglect of such symptoms as Backache, Irritability, Displacement, Pain in the Side, Dragging Sensations, Dizziness and Sleeplessness.

Second, that Lydia E. Pinkham's Vegetable Compound, made from native roots and herbs, has cured more cases of female ill than any other one medicine known. It regulates, strengthens and restores women's health and is invaluable in preparing women for childbirth and during the period of change of life.

Third, the great volume of unsolicited and grateful testimonials on file at the Pinkham Laboratory at Lynn, Mass., many of which are from time to time being published in special permission, give absolute evidence of the value of Lydia E. Pinkham's Vegetable Compound and Mrs. Pinkham's advice.

Lydia E. Pinkham's Vegetable Compound

For more than 30 years has been curing Female Complaints, such as Dragging Sensations, Weak Back, Falling and Displacements, Inflammation and Ulceration, and Organic Diseases, and it dissolves and expels Tumors at an early stage.

Mrs. Pinkham's Standing Invitation to Women

Women suffering from any form of female weakness are invited to write Mrs. Pinkham, Lynn, Mass., for advice. Since the Mrs. Pinkham who has been advising sick women free of charge for more than twenty years, and before that she assisted her mother-in-law, Lydia E. Pinkham, in advising. Thus she is especially well qualified to guide sick women back to health. Write today, don't wait until too late.
