

change today with the sale of \$7,900 shares for the sum of \$23,564.88. Ajax few weeks has been a matter of comopened at 87 and closed at 87%, with the | ment among mining men, who wonder sale of 2,500 shares. Lower Mammoth was active at \$2.77 at the outset, but it sold up to \$2.80 before the call closed. Mammoth let go 200 at \$2.22, while May Day, which sold at 47 in the beginning hands since Monday. It transpires of the call, moved up to 471% on the now that a great deal of the stock is closing sals. Northern Light sold from 5¼ to 5, while Con. Mercur was very active around \$3.20 per share. Star Con. opened with the sale of 3,200 shares at 75 and after declining to 74% it moved up to 75% on the closing sale. Sunshine sold at 25 while Swansea let go 300 shares at \$3.85. Tesora was very active again today at prices ranging between 40 and 33. Ben Butler moved up a little today selling at 6% on the closing sale. Boston & De Lamar participated at 2.25 per thousand. Little Chief was active at 16 and Martha Washington sold at 5.

The quotation of the stocks at the close were as follows: Bid. Asked.

solidated Mercur stock during the past "Three Crown" guarantees them a pure and good article at a lower price than where the stock is coming from. Prices the imported goods would cost. Ask your grocer for the "Three Crown" have remained steady around \$2.20 all brand the next time you order goods in the week in spite of the fact that nearly 10,000 shares are said to have changed our line. Hewlett Bros. Co.

passing into the hands of insiders. Vice President John Dern is known to have bought 2,000 shares on the exchange today in addition to other purchases earlier in the week The stock is being sold mainly by one brokerage firm who say the stock is coming from a number of different places. A 5,000-share block was recently sold belonging to California parties, and a great deal of the present stock is coming from the East in the vicinity of the iron regions. The passing of the last dividend may have something to do with the present action of some of the stockholders, but it would seem that the fear of a num-ber of smaller shareholders are not entertained by some of the insiders who are taking up the extremely free offer-ings at around \$3.20 per share. It is known to be the desire of the management to make a good showing on en-tering the Boston Exchange, where the stock will in all probability be quoted next month. It is also evident that the managemeint would not want a break in the stock at this critical moment. This probably explains why the stock has remained very steady for the past few weeks in spite of the big lots of stock offered for sale. The mine is reported to be looking well and the listing of the stock in Boston and the narment of a dividend in April will

payment of a dividend in April will probably ease the minds of those who low seem so anxious to part with their holdings. Meantime the fearful ones who anticipate a collapse are able to get out at fair prices.

THE DALTON & LARK.

M. D. Murphy Reports Progress on the Big Drain Tunnel.

M. D. Murphy, under whose direction the big Dalton & Lark drain tunnel is being pushed in to the ore zone, came in from Bingham last evening. He reports the work moving along in good shape. The tunnel is now in about 200 3% shape. feet and owing to the soft nature of the rock the management is able to make headway about 5% feet per day. A force of ten men is employed in this work, which is being done by hand at present. When completed the tunnel will be 2 2234 about 5,800 feet long and will tap the big ore bodies in the Dalton and Lark about 200 feet below the lowest level in the mine. The tunnel will be a pattern

DESERET EVENING NEWS: THURSDAY, FEBRUARY 21, 1901.

subsequently helped Federal Steel a point and the general market slightly, but the improvements were not well but the improvements were not well maintained. Large offerings of Steel & Wire depressed it to 45¹/₄, but without much effect on the general active list. Some of the low priced rallroads weak-ened, Erie second preferred losing two points. The local tractions were then hid up a point each and their sustain-ing effect on the market was supple-mented by a demand for some of the southwesterns which rose strongly, particularly the Wabash issues. At particularly the Wabash issues. At noon prices had reacted and trading extremely dull. NHS

out together, attended the little church at Rothbury in each other's company, and appeared together at such public functions as were compulsory with his status as a peer, never a word did the baron and his wife exchange either by

voice or gesture. When Lady Armstrong was buried some seven years ago her husband's stolidity and heaviness of heart never relaxed, and the remainder of his days he spent in apparent contentment at Cragside, among his trees and flowers, ever willing to talk of his pictures, which included the best works of Turner, Wilkje and Millais

A SUBMERGED RAILWAY ACROSS THE ENGLISH CHANNEL.

It may surprise our readers to know that there are two projects in existence at the present moment for a submerged railway across the English Channel. On December 17, 1884, there was registered a "Channel Bridge and Railway

company:" its offices are at No. 69, Rue de la Victoria, Paris. It was formed to acquire the business of the International Railway company. du Detroit de la Manche. Limited, and "to make further investigations, etc., with a view to the construction of a bridge or viaduct across the English Channel (as a means of communication

between England and France)." It was decided to construct a sub-merged bridge 59 feet below the lowest tide, and to run thereon an electric car capable of transporting four railway trains, which would be secured very much in the same way as the rains are fasten between New York and New Jersey. The directors' report, recently submitted, stated that the work could be completed in five years at a cost of not exceeding \$70,000,000 The train platform was to be 500 feet long and 50 feet wide, and was to be carried on five steel columns on each side, these being braced to and resting upon a submerged platform mounted on wheels running on rails 100 feet apart. Steam engines and dynamos on the train platform would provide the power for rotating the rail wheels on the lower platform.

CLEARING HOUSE REPORT.

February 21, 1901.

ORE AND BULLION REPORT. MeCORNICK & CO.

Cyanides

BAMBERGER & MCMILLAN.

ALLOWED THE BILLS.

The State board of examiners held a long and busy session in Governor Wells' office today. They passed upon all bills pending against the State up to the date of the meeting. The expense of the present Legislature formed the

major part of th claims considered to-

14

of excellence when completed. Mr. Murphy says it is 8½ feet in the clear at the bottom and 7 feet high. JOE BOWERS SUIT. Appellant's Petition for a Rehearing Denied Today. A short time ago the Supreme Court handed down a decision in the case of Lorenzo Ewell vs the Joe Bowers Mining company, appellant, affirming the judgment of the Juab conty district court, awarding the plaintiff \$15,000 damages for injuries sustained while working in defendant's mine, and today denied appellant's petition for a re-hearing, which settles the matter as far as the Utah courts are concerned.

As there is no constitutional question involved in the case, the defendant cannot appeal to the United States Supreme Court, hence the injured man will now doubtless get his money.

Milling Ore in Lower Tunnel.

About March 1st the Red Wing Extension company of Bingham expects to forward its second lot of second class ore to the mill. The lower tunnel has opend up a big vein at greater depth and it was said today by one of the directors that the values are better in the lower tunnel. About 16 feet of ore is said to be in sight. Some if it very low grade, too low to mill at a custom mill, but the company is said to have several feet of good milling ore in the lower tunnel, with prospects of finding still better values when a point farther aheadin the vein is reached.

Silver Shield Ore Output.

Regarding the slump in Silver Shield during the past few days, those in charge of the property report very little change in its physical condition. Mr J. W. Langley visited the mine a few days ago and he says that while the output for the beginning of the month s not as much as it has been for some time past, the shrinkage is not sufficient to cause any alarm.

Will Visit the Bazonk.

Manager A. Van Patten of Ogden is expected to go out to the Bazouk property in Bingham tomorrow in company with J. S. Free to inspect operations. The new shaft is now down about fifty A larger body of ore has been en countered and the bottom is now all in ore of good milling character.

An Explanation.

In the account of the purchase of the Fintham interest in the Columbia of Bingham, given in yesterday's "News," it was stated that the sum of \$62,500 was paid for the stock. This is an error, the result of a misunderstanding. The stock referred to was purchased for a much less figure, but it was se-cured on the basis of \$62,500 for the whole property.

BOSTON WOOL MARKET.

Boston, Feb. 20 .- The American Wool and Cotton Reporter tomorrow will say 'The wool market has rather increased in activity the past week and a larg amount of stock has been moved. We figure the sales at over 6,000,000 pounds including in which were some goodsized lines of territores, scoured and medium fleeces, There has been considerable pressure to sell, and as a result consumers have in most instances been able to secure wools at pretty low prices, especally territory wools, which are now selling very close to the level of values prevailing at the time when the boom in 1899 was started.

"The wool sales for the week in Bos-ton amounted to 5,305,200 pounds do-mestic and 965,000 pounds foreign, mak-ing a total of 6,270,200 pounds.

are invited to attend. LORD ARMSTRONG.

Pen Picture of the Great English Inventor.

Northumbrians of the present generation will readily recall the little, weaz-ened old gentleman who daily bustled through the early morning crowds as they poured from the Great Northern railroad station to their various call-ings in Newcastle-on-Tyne. His rapid steps, almost amounting to a trot, even at 80 years of age, were invariably di rected toward the famous Elswick works. With his large slik hat drawn well over his ears, black stock showing just a suspicion of collar, and "swallow tail" coat of antique cut, he was truly a remarkable figure in the hurrying throng of clerks engineers, ship-builders and coal mine workers.

When William Armstrong, a prosper-ous corn merchant of Newcastle, found that his son, who was then plain "Mas-ter William," turned all the toys that were presented to him to some mechanical purpose, he probably little thought what this early and somewhat primi-tive education would lead to. Little William was a very delicate boy, so our grandfathers have told us-so delicate that he was often kept at home for long periods, and it was during these that he improved upon his playthings.

Gradually, however, the boy grew out of his weakness, and at the age of 22 he was strong enough to enter a lawver's office, where he worked for nearly fifteen years, when he turned his atten-

tion to engineering. His success in hydraulics and gur manufacture subsequently made him world-famous and brought him enormous wealth, and though the Arm-strong motto is "Fortis in Armis," and the family coat-of-arms bears two of the most muscular looking individuals ossible, the late baron always preferred to be regarded as a preserver of peace rather than an author of carna Re.

Not until late in life did Lord Armstrong wean himself from electrical and scientific research during his spare moments. He suddenly became infatuated with landscape gardening and tree planting. After transforming the property known as Jesmond Dene from a barren waste into a glorious ravine through which a tiny tributary to the Tyne flows, and which property he later gave to the corporation of Newcastle as a public park, Lord Armstrong purchased some 10,000 acres of rocky land just outside the little town of Rothland bury, lying at the foot of the Cheviot

hills, and within a few miles of the bor. der of Scotland. There most of his ter days were spent, and he allowed his pet hobby no limitation, sowing, plant. ing, transplanting, importing trees and shrubs from all corners of the world with such success that in a few years Cragside became one of the horticul-tural features of the world. On certain days in the week the grounds were open to the public, and Rothbury be ame the objective point of many an American tourist.

Like many another man who has nade his mark in the world of arts, letters or science, Lord Armstrong had a great sorrow. Though married in the full vigor of manhood to a highly respected lady from his own neighbor. hood, no children blessed their union, as wealth, honors and decorations rained upon the young inventor, he frequently inmented to his friends that he had no direct heir to inherit his title and profit by his accumulation of riches, Enormous sums were given away to charity, but this seemed only to aggravate his loneliness, and before he was 60 years of age Lord and Lady Armstrong became estranged. Hence-forth such conversation as they desired to carry on with each other was done through the medium of servants. A terrible silence reigned at Cragside. Though they dined together daily, drove

The other submarine railroad scheme has been evolved by an enthusiastic Frenchman, M. A. Mottler by name, and it differs in some details from the one just mentioned,

The permanent way (let us hope it would be "permanent") is to be 13 feet in width and some 30 feet above the bottom of the channel.

This would not interfere with navigation, and would afford a secure bed for the rails, being built of solid masonry and anchored to withstand the currents.

The elevated platform is to be 320 feet long, 125 feet wide, and 125 feet above the rails. It will be capable of taking several railroad cars at once, to say nothing of animals, baggage and freight

On it there will be saloons, heated and lighted by electricity, smoking-rooms, in fact, all the comforts that are to be found today on the finest ocean grey hound

M Mottier is confident that the crosschannel trip can be made in less than an hour. The passengers will enter the sleeping-car at London, and will go to sleep in the assurance that they will not wake until the gay capital of France is reached. The trains will be run straight on to the platform, and the huge structure will then start on its journey across the channel without the slumbering passengers being aware whether they are on land or on sea,

The sea-going car imagined by M. Mottier will be propelled by an engine located on the platform, and will be worked either by steam or electricity. engine will operate a drum, over which a chain will be thus drawn from one side of the channel to the other. M. Mottler estimates the total cost of this unique undertaking at the small sum of \$3,750,000, and calculation for twenty trips every twenty-four hours.
