ists to terrorism, that "war of sur-prises and 'raps," which others call conspiracy and assassination. But of late, says Stepniak, the mili-

tary conspiracy has spread with in-conceivable rapidity, encouraged both by political considerations and by the personal unpopularity of the Emperor He affirms that the number of offcers arrested for political offenses has been much larger than is generally known and that the government carefully conceals the facts about such arrests. Of the personnel of the officers accused, it is said that they are of "the flower of the army," and the names and services of control of the army." vices of several distinguished officers lately arrested are recounted. With

the aid of their military allies the Benjamin, senior President of the 46th Quorum of Seventies, and Presiding Elder of the settlement that bears ms name. He came to Payson this morn-Nihlists believe that before long they can, with reasonable hope, plan an open assault on the government. In other words, revolution is to be substituted for assassination. All this must be taken with due allowance, but it undoubtedly indicates the designs of the leaders of the terrorists, and may account for the cessation of attacks imed at the life of the Emperor.

> vell as from England, comes renewed evidence of the practicability and fu ture promise of co-operative labor A report has just been issued by M. odiu's co-operative community at Guise, France. This society is now 25 years old. The business is that of an ron foundry, and employes 1,400 peo-The principle of operation is simple; the capital, originally provided b M. Godin, receives five per cent. inter st in preference to other claims Further profits are divided among the Further profits are divided among the workingmen in proportion to abilities, conduct, and seniority. In 1883, out of the profits of the year, 20,000 francs were paid to capital; 1,800,000 to labor. The average of wages was higher than that of similar establishments in England. A peculiarly interesting and commendable feature is that the worker is allowed to leave a portion of his profits to accumulate and ion of his profits to accumulate, and be transferred into shares of the capi-tal. This gives him an increasing income from year to year, and a provi-sion for old age. In time the entire capital will be owned by the workmen.

For ten long years Mr. Francis Mann Ioddle street and Simpson's road, Mel bourne, Australia, says, he suffered with rheumatic gout until he tried St. Jacobs Oil, the wonderful pain-reliev-er, which cured him.

fectually imprisoning the luckless visitor. A number of glands on the leaf-surface secrete an acid fluid which has the power of digesting the body of the insect, after which the matter is absorbed and the lobes reopen. The leaf remains closed for a period varying from nine to twenty-four days, and is not sensitive for a short time after re-opening. Other examples of insecteating plants are found in the Sundews, especially the round-leaved Sundew Droscra Roundifolia. The surface of the leaf is covered with red filaments, each tipped with a small knob. The presence and distribution made as prayed for.

EVENING NEWS.

**CORRESPONDENCE** 

DEATH OF B. F. JOHNSON.

It becomes my painful duty to report he sudden death of our beloved

brother, Benjamin Franklin Stewart, of

Editor Deseret News:

Payson, June 22, 1585.

name. He came to Payson this morning in his carriage. I conversed with him twice. He was in excellent spirits. Our conversation was on the subject of the second coming of Christ, which he felt could not be delayed beyond the year 1891. He started for home about 11 30 a.m. and reached his residence, about two miles north of here, during a half and thunder storm. He was sitting in his carriage at the east end of the house when a bolt of lightning struck CO-OPERATION. - From France, as the chimney, and, glancing down, killed bim instantly. The horses took right and ran away, but were stopped J. J. Koontz, son-in-law of the de-The funeral services will be held on Our brother was a faithful and good man, and leaves a large family and nany other relatives, with a large ircle of personal friends, to mourn his

sudden departure. He was one of the Pioneers, and had done much for the building up of our Territory. Your Brother in the Lord, ISAIAH M. COOMBS. AN EXPLANATION RICHMOND, Utah,

a een Mr. Allen and Mr. Gooch, refer ence was made to Allen being a prothe of the lunatic who so unmercifully beat his brother-in-law's children some time since. The above sentence seems to have caused considerable comment and wounded the feelings of Mr. Allen's relatives. While the sen tence referred to may be of such a nature as to hurt the feelings of a sensitive person, it was entirely foreign to my thoughts when writing it, that such

small and serves as a cover to the pitcher. The Tree-pines, or Tillandsias of tropical lands are en-titled to rank as Pitcher-plants, since the leaves are dilated at the base into

causes the whole leaf to droop as i vithered. structure among plants, must be awarded to the so-called "carnivorous plants." The Venus' Fly-trap, Dionae Muscipula, is a very small plant growing in American marshes as far north as North Carolina. The leaves spring directly from the root, each be-

and hinged together. Along the centre are three short, stiff, and highly irritable hairs. When touched by an insect the sensitive lobes suddenly close, effectually imprisoning the luckless visitor. A number of glands on the leaf-surface secrete an acid fluid which has the rower of disasting the body.

a small knob. The presence of a insect moving over the leaf, causes the filaments to bend downward and hold the intruder fast. The body is digested and absorbed, essentially as in the former example. The common Bladder-wort or Utricularia of the which serve to buoy up and float the plant. Aquatic insects, ond even small ishes force their way into the bladder, through a small valve which opens only inward and when once inside the animal is safely caught. Here sooner or later, it dies and yields its decaying substauce to the support of the plant.

hat wise and careful supervision from the outset, which is the first and great-est requisite to the success of co-oprative movements.

a thing should occur. I wrote the let-ter merely as a matter of news, and the unfortunate reference was made

I will say, in justice to the family, that they are highly respected and the gentlemen are intelligent members of confine myself to the facts, as far a

SOME REMARKABLE PLANTS Many plants seem remarkable to us because they are odd. Thus the ordinary yeast plant, Torula Cericisiae, appears under the microscope as an oval and coloriess granule. These

mentation is the result of the increasing of these little plants in the yeast The faint green scum seen on rain

ity through the water. This form is called Protocoecus Ptuvialis, and is undoubtedly a piant, although the power of active locomotion appears a strange property of plants. This peculiar litterature.

he warm season.

A patch of the common mould which rows so inxuriantly on damp bread ld boots, and preserved fruits, proves on examination to be a fairy forest of a wondrous growth. Roots, or hyphac penetrate into the substance upon which the mould is growing, and from these arise stems, each bearing on the op a spore case, greatly resembling the seed tox of the ordinary poppy, these cases break when ripe and so scatter the contained spores. The commonest moulds belong to the forms

ontains a liquid, in which, numerous nquisitive insects are continually be-ng drowned: and there is little doubt

the leaves are dilated at the base into a cavity capable of holding more than a plut of fluid. The common Teazie, Dipsacus Sylvestris, is a near approach to a pitcher, as the opposite leaves are united at the base to form a sort of basin within which a half pint of rain and dew often collects. The Sensitive-plant claims notice among peculiar plants. This name applies to certain species of the Mimosa family, whose leaves possess the property of irritability. The pinnac shrivel and shrink

The pinnac shrivel and shrink when touched, and rougher handling However, the palm for curiosity of

In my letter to you of the 17th inst

water pools is composed of myriads of minute plants, each somewhat pear-shaped, and provided with a couple of cilia, or hair-like arms by which it is nabled to swim with tolerable rapid

Among the higher forms, the Pitcher-

plants stand prominent in peculiarity of form. One of the best known is the Nepenthes, which is found in swampy regions of East Iudia, Chiua and the Malay Archipelago. The midrib of the leaf extends beyond the blade and widens out into a cylindrical vessel fitted with a hinged lid. This "pitcher" that their decaying bodies are of service in nourishing the plants. The tropical regions of America farnish two other forms of Pitcher-plants, the Sarracema or "Huntsman's Horn," and the Darlingtonia. In these, the cup is formed of the leaf stalk, developed into a thin blade, the edges which are united. The true leaf

ing supported upon a long, winged stalk. The leaf-blade is divided into halves, which are fringed with hairs,

derground Russia," has lately been printed in this country. In it he declares that since 1880 the revolutionists have been specially exerting themselves to spread their propaganda among army officers. Their first movement was an attempt to incite to an insurrection the ninety million peasants. But this class was interested only in a social, not a political, revolution. "A political revolution is a town revolution." The impossibility of bringing about a successful revolt in a city like St. Tetersburg, guarded by an army of 250,000 men, turned the Nihil-
