Tests Made on Rankin Copper Ore Very

Satisfactory.

Special Correspondence.

Rawlins, Wyo., April 24.-James Rau-kin, one of the owners of the Rankin copper mine, located four miles from the city, has returned from Denver where a test run was made of a carload of ore from the mine. Mr. Rankir says the returns were even more sat isfactory than expected. He will put more miners at work, and regular shipments will be made to the smellers. It is believed here the Rankin mine is a very rich proposition, and that the owners have fortunes in sight.

VISITED CAMP OF PIOCHE.

J. V. Brooks Inspects Ploche-Nevada Con. and is Favorably Impressed.

J. V. Brooks, who is extensively interested in the Freiberg district in Lin-coln county, Nevada, has returned from a trip to camp. On his way back he stopped off at Pioche for a few days and while there made an inspection of the property now being operated by the Pioche-Nevada Consolidated, which he characterizes as being very favorably situated for the making of a good mine Although the ore has not yet been found in place, he says, it undoubtedly will be when more depth is attained. In the surface deposits Mr. Brooks found some surprises awaiting him. "These are immense," said he today, "and I saw a great man" car loads of ore there that will pay very good re-

turns.

According to the New York Commercial the Tonopah Mining company's officers have been quietly preparing a surprise for a great majority of the stock-

holders of that corporation. There is now approaching completion

at Waverly, N. Y., adjoining the Ricketts & Banks laboratory, an experimen. tal reduction plant designed to test the medium-grade ores which have been found in the company's claims at Tonopah.

The utmost secrecy thus far has erty. been observed in preparing the plant for work, and, unless unexpected delays occur, it is believed operations will begin within the next two weeks. Sev-eral days ago about 100 sacks of Tono-

pah ore were received at the plant, and evening. the average value of the ore which they contain is said to be over \$100 to the

The process employed for the reduc. tion of the ores is an extremely novel The furnace proper is about 12 one, feet long. To it is attached a stack extending about 30 feet perpendicu-larly. The ore is fed into the furnace from the top of the stack and is ignited by some process, and while falling into the furnace the particles of metal present in the crushed rock are separated. What occurs after this operation is a mystery, though it is believed that the ore is dragged through the furnace by some device. How the process will operate on gold and silver ores, with the latter prependerating, is a matter of much conjecture, and the inventor, Mr. Keith, is unable to forecast definite resulta.

Considerable quantities of Tonopah ores will go to the smelters of the American Smelting and Refining company in Utah and other refiners, but it seems to be the general opinion that, for a while at any rate, the smelters will not be able to handle the en-tire output of this camp. Besides, there is both a second and a thirdclass ore that will be kept until a process is secured to treat it economi-

TETRO ORE SOLD TODAY.

About 114 Tons Goes to the American Smelters.

The Tetro of Tintic appeared in to-day's market with 228,461 pounds of ore which was settled for on controls showing 30.3 ounces silver, 42.1 per cent lead and 5.9 per cent iron, the purchaser being the American Smelting

and Pefining company. Pe diag the installation of the new hoisting works the hoisting of ore from the mine has been suspended. It is expected, however, that the new, engine will be set in place today or tomorrow, when operations will be resumed.

It is reported that the Pinos Altos smelter, near Silver City, N. M., has been started under the management of Ben Johnson, says an exchange. The copper matte secured from this smelter vill be shipped to the Burro mountain smelter, which is under the same management, to be used as flux. A large force of men is employed at the Pinos Altos, and the work will be vigorously prosecuted.

A GALLANT BUTTER MAN.

"When the queen of England," said Am-bassador Choate, "was the Princess of Wales, she attended, one afternoon, an food show. She is, as of course, you know, a daughter of the king of Den-mark. "Well, at this food show there was a display of butter that pleased the Prin-cess of Wales greatly. She praised the butter, and to its exhibitor she said: ""Denmark sends us the best butter, doesn't it."
