

perience to be realized we term imagination. The feeling which accompanies the ideal is called the aesthetic feeling. When we have decided upon a line of conduct, that is motive. When association is very complex, the action of the mind is termed thinking. When we feel that the good of others is in harmony with our actions, that is the moral feeling. The unified action of impulse—desire—attention—choice and motive we call will. Many persons become insane because of an abnormal development of the will. Intuition is the great power of the mind to see the whole in or from a part, or any part. Religion is the high feeling of humanity which we feel when we are in complete harmony with all things in the universe.

After a short recess Supt. Hall introduced Mr. Riley, who spoke on the power of good reading. The speaker took up as a basis of facts that ninety-six per cent of all pupils who enter in the public schools never reach the High School, and less than two per cent of all High School pupils ever reach the university. This thought opens to the teachers the fact that there is a great work for the teachers outside of the the schoolroom. Speaker showed that even at a financial consideration it was cheaper that the parent provide books for the home. Lincoln, an example of self education. He cleared by an encomium upon the power and influence of the teacher and his duty as a trainer of citizenship.

After Mr. Riley's lecture, Prof. Stewart spoke for a short time on the study of geography.

The Institute promises to be one of exceptional interest.

Professor Hall is very enthusiastic and has the confidence and the hearty support of the entire corps of county teachers.

R. M. ANES,
Secretary.

IDAHO CROP REPORT.

Weather crop bulletin No. 19 of the Idaho state weather service for the week ending Monday, August 13, 1895.

The forepart of the past week was very warm and dry with a few scattered thunder storms which did very little toward relieving the drought; high winds were frequent. Frosts occurred over the central and eastern sections on the 8th, 9th and 10th, seriously damaging potatoes and garden truck in a few places, and slightly injuring late grain on low lands.

Threshing is in progress over a large portion of the state and will probably be general this week; the crop is variable but generally good. In Cassia county the yield will fall below that of last year. Late sown grain is backward and does not promise much.

Potatoes which were not affected by frosts of last week are doing exceedingly well and a large crop is assured. In Bear Lake and Bannock counties the crop was badly damaged and in some places it will be a failure. Corn has improved considerably in the past few days. Garden truck suffered somewhat from frost but is doing well except in portions of the northern section where gardens are suffering from drought and vegetables are ripening prematurely.

Timothy is being cut in Idaho counts; the crop is short but of good quality. The second crop of alfalfa has been cut in number of places; on irrigated land the crop is very good, but on dry lands in some places it is hardly worth cutting.

Fruit continues to prosper.

D. P. McCALLUM, Director.
Central Office, Idaho Falls, Idaho,
August 13, 1895.

WEATHER AND CROPS.

U. S. Department of Agriculture, Weather Bureau. Weather—crop bulletin of the Utah weather service, for the week ending Monday, August 12th, 1895:

The temperature during the past seven days averaged about three degrees below the normal. Light scattering showers fell in portions of Millard, Sanpete, Piute, Utah and Uintah counties, and frosts, severe in some localities, occurred in Summit, Morgan, Box Elder, Wasatch, Cache, Rich and Weber counties on 8th, 9th and 10th. There was about the normal amount of sunshine during the week. Upon the whole the weather was very favorable for ripening grain and harvesting operations.

The severe frosts during the middle of the week did considerable damage to corn, potatoes and other tender plants in portions of Rich, Summit, Weber and Cache counties. In the vicinity of Newton, Cache county, ice formed three-eighths of an inch thick on the morning of the 9th, causing great injury to unripe grain, corn, beans, potatoes, etc. In the vicinity of Randolph, Rich county, potatoes were killed and wheat and barley badly damaged. The high winds which prevailed during the week lodged heavy grain in Uintah, Sanpete and Wasatch counties, making it difficult to harvest. Threshing is about over in Box Elder county, and well under way in other districts; the yield is reported as quite satisfactory and about the average. In Juab county the yield of grain will be the best for years both in quantity and quality; corn and potatoes will be somewhat light on account of late frosts. The sugar beets look promising, but need moisture for advancement in growth. The second cutting of lucern is in progress, with indications of a light crop except in southern portions; the third cutting promises to be almost a failure, owing to scarcity of water. The fruit crop will be about the average. The farmers of Utah county are making preparations for fall sowing.

Tocole—No rain. Potatoes will be a mixed crop; some patches look well, but others nearly a failure.

Moroni—Week warm; sprinkling of rain one night; wild hay nearly cut, a good crop; cutting second crop of lucern commenced; cutting of spring grain will commence next week; heavy wind lodged some of the grain. Snowville—Grain harvest commenced. Light frost north of here on the 9th, killing squash and damaging potatoes on some farms.

Plymouth—Week has been good for growing and ripening of crops. Heading is nearly completed; threshing in full force; second crop of lucern being cut.

Cache Junction—Last week very

warm; frost Thursday and Friday night nipped potatoes and corn.

Santaquin—Warm days, cold nights. Grain has turned out better than expected. Public opinion here has decided that dry farming is a success. Today (12th) it started to rain about 1:30 p. m. and kept it up until 6:30 p. m. This will almost ripen corn and potatoes. Farmers preparing for fall sowing.

Levan—Another week will wind up the harvesting of small grain; no doubt the best for years both in quantity and quality. The corn crop will be considerably under the average, early potatoes the same, later sorts somewhat better; cause late frost.

Randolph—Heavy frost morning of 9th, killing potatoes and most of wheat and barley. Wild hay is being put up; oats are turning.

Newton—Hard frost morning of 9th, ice $\frac{1}{2}$ of an inch thick. Potatoes, corn and other tender plants badly nipped. Harvesting going on fast; grain not all ripe yet; cutting second crop of lucern.

Gale—Harvesting is progressing nicely; second cutting of lucern is about all gathered; neither the first nor second crops are very heavy, and the outlook for a third is very doubtful on account of the failure in the water of the Jordan.

Conville—Heavy frost morning of the 9th, made tomatoes black, but nothing else. Early cabbage ready this week.

Croydon—Most of the hay in the stack; crop light; barley ready to harvest; wheat getting ripe. Light frost morning of the 9th, nipped the potatoes.

Box Elder—Light frost night of the 8th; corn, potatoes and vines touched; no damage. Harvesting nearly finished.

Yost—Weather fine; hay is going up in good shape; grain is getting ripe fast; will soon be harvested.

Heber—Very hot, dry week. Grain ripening fast and somewhat prematurely; water scarce; light frost morning of the 9th, nipping a few leaves of tender vines.

Lake Shore—The harvesting of grain is in full swing, some commenced to haul, threshing will soon begin; grain crop is good; second lucern being cut; potatoes are looking good; beans doing well.

Scipio—Heavy wind 7th and 8th, blowing down heavy grain. Everything growing nicely; grain ripening fast and harvesting well commenced. Second crop of lucern ready for cutting and fairly heavy; potatoes light crop apparently.

Payson—Harvesting here; second crop lucern almost over; very hot and dry weather.

Holden—Second cutting of lucern nearly all in; harvesting in full blast; had a refreshing shower on the 6th which helped our crops a little, as our water is getting quite low; crops in general look good.

Meadow—Second crop of lucern nearly all in; wheat about all cut; good average crop; corn potatoes and fruit all good crops; worms less in apples than formerly; rain much needed.

New Harmony—A very warm week; no rain but plenty of water to mature crops.

Joseph—The week has been hot and
