LITTLE BUCK SHIPS ORE.

Horseshoe Mill Handling Ore, Some of Which Shows Free Gold.

Which Shows Free Gold. (Special Correspondence.) Fay, Lincoln Co., New, Nov. 23.—The Little Buck mine, near Fay, has begin shipments of ore to the Horseshos mill at Fay, which is about ready to begin treating custom ore. The Little Buck has been leased for a year to John Bry-den, and efforts are being made to pro-duce a steady tonnage. There is a good streak of ore showing some free gold in the south drift on the 100 level. The old Horseshoe shaft is being re-paired, as it had given way in several places above the 100-foot level. It is new in good shape to that point and exnew in good shape to that point and ex-plorations will be begun with a view to taking out ore as soon as possible.

WESTERN FTAH A WONDER.

R. B. Bishop Gives Good Report o Mine-Strike Near Silver Island.

R. B. Bishop was in town today from the Western Utah Copper com-rans's property in the vicinity of Deep Creek where he has been doing some contracting on the 600 level, of that property: Since the visit of Dun-can McVichle and Mr. Heinze to the

Manager S. M. Levy, of the Ely Consolidated Copper company, returned last night from Ely after spending several days at the property, which is mid to be responding satisfactorily to the

development work being done there. Arrangements will be made as soon as possible to secure a ohurn drill which will be used for prospecting from the bottom of the Zack shaft, which is down 430 feet. It is proposed to sink to the depth of 900 feet, or about 500 feet below the bottom of the shaft. Mr. Levy is of the opinion that the rhyolite formation which has entered the bottom of the shaft will prove to be the rhyalite of the shaft will prove to be the rhyolita covering of a big bed of copper ore, similar, to that Lound in the Nevada Con, and as the water line at the depth of about 400 feet would make sinking in the shaft expensive, Mr. Levy Las decided to nike a churn drill on ac-count of its economy. A change is recorded in the face of the drift from the 400 level of the Zark shaft which is being run to intercept the ven. The line is being replaced by oxidized iron.

shaft which is being run to intercept the velt. The-lime is being replaced by oxidized iron. The company is now working in all three shafts on its property. Develop-ments in the Brilliant shaft are report-ed to be quite as good as ever, and the drift on the 35e level of the American shaft is said to be in good vein contain-ing lead and copper in different places. Picked assays show as high as 61 per cent copper. The vein is large and the ore found makes on the footwall. The hanging wall has not yet been found. Mr. Levy says that numbers of people are visiting Ely in spite of the lateness of the assaon, and everything is pros-perous despite the fact that the present storm had deposited 10 inches of the "beautiful" when he left yesterday.

On 1,500 of Lower Mammoth. Some encouragement is felt at the office of the Lower Mammoth Mining company because of a report from Su-perintendent. Coffin that quarts con-taining 2 per cent copper with 17 ounces sliver and some gold, has been encountered in the bottom of fhe drift in the east fissure on the 1,500 level. The main work of the management at present is being directed to getting the station completed on the 2,000 level. As soon as this work is done, it will allow of more exploratory work being done elsewhere in the mine, as the holst has been kept pretty buay intely hauling the been kept proity busy lately hauling the dirt from the bottom of the shaft, as high as 140 carloads per day being brought to the surface.

Streak of High Grade Carries Several

Annuel Ounces silver, Ore assaying 1.015 ounces in silver, 64 per cent lead and 35.16 gold, is what the Ploche X-Ray Mining company ob-tained from a sample taken from the new sirkle in the X-Ray property this week, says the Ploche Record. While this was a picked piece, Manager Tay-lor says that it is no trouble to get as-says showing better than-600 ounces in silver.

mys showing better than son ounces in silver. The strike was made in a cross-cut from the bottom of the shaft-about 1,100 feet from the portal of the tunnel -which was sunk about the time that Mr. Taylor began the development of the claims something like two years ago. The strike is in a bedded vein ranging in width two and a half to five feet; but the high grade silver-lead or comes from a streak from two to 10 inches wide. The balance of the vein carrying around 50 per cent lead, 20 ounces in silver, with gold associated. The face of the tunnel is about 450 feet from where the bedded fesure should be cut, and at a point 670 feet vertical depth from the surface.

MYSTERY SURROUNDS **DEATH OF YOUNG WOMAN**

New York, Dec. 1.-Mystery sur-rounds the death of Mrs. O. W. S. Snead, a young Brooklyn woman whose body was found in a bath tub in a va-cant house in East Orange, N. J. yes-turday. The police have taken into cus-tody the vicitin's aged aunt, Miss Vir-ginia Wardlaw. Clews bave led them, to attempt to connect the death of Mrs. Snead with happenings in a so-called house of mystery, in Fintbush, Brook-lyn, where Miss Wardlaw, Mrs. Snead and two strange old women lived unth recently.

and two strainge old women lived until recently. The search of the house today led to the discovery of blood spots in vari-ous rooms. In the kitchen stove the police found two bundles of human hair, while crushed down in the stove were four human bones, partiv hurned, and the skull of a child 2 yeass old. Mrs. Snead's husband disappeared last summer.
