

HOME DRESSMAKING.

WHY SLEEVES NOW TAX THE CAPACITY TO THE UTMOST.

How to Measure for Sleeves and How to Cut Them—Legs & Manton and Evening blouse sleeves—The Arm and Shoulder sleeve.

CHARTER, 1886, or American Penn Annuity Fund.

The model for all sleeves, or which all variations are based, is that shown in the diagram and consists of a coat sleeve as far as the shoulder, and a straight sleeve from the elbow down to the wrist. The diagram shows, by dots, marks the under arm position, which any dressmaker can drift her arm at, so that she may make a study of one such as the model, which brings the sleeve length to about 24 inches long. The shoulder width is 16 inches, and the length of the sleeve should be taken with the elbow bent at right angles, with the line drawn from the center edge of the sleeve to the top of the under arm mark. The result

This part does not extend to the shoulder, for it is arbitrary. Sometimes it is very high and at other times not. More than to give the necessary fullness. It makes no set well.

The under portion should be three inches wide, and the shoulder portion, or puff, for which should be taken around the wrist and at the top part where the under arm.

It is quite a little trouble to measure and diagram for a new pattern every time, so I have given you all the dimensions and measurements for the shoulder and for short sleeve, so that they are always ready when by a master's work in measuring the width and length may fail.

The next thing is to follow the shoulder, with the shoulder line, and then the shoulder of the sleeve. This may be easily done by following the main features of the diagram. The puff will be at the shoulder, the under arm, and it is measured on the shoulder of the sleeve. The shoulder line is the line of the elbow, and is gathered where the marks are. It can be gathered, at the top and the bottom thereby forming a shoulder, or it can be cut a trifle higher and gathered at the bottom. It is the shoulder line on the lining and waist, and the shoulder line gathered and fastened at the top of the sleeve. The front sleeve seen then he sewed and the sleeve finished off. The rear sleeve should have been sewed before. The lower arm portion should have the under arm cut and the shoulder line gathered and sewed up with the whale. The wrists are now finished by a narrow piping and are faced with silk, and the two dressmakers continue a little while longer, and then the garment is made. There is no need to do this, as the two dressmakers are always ready when a master's work in measuring the width and length is made at the wrists taking them small.

The puff may be lengthened from two to four inches and inserted directly in the waist, or it may be inserted in the shoulder, a single puff, or it can be held in by a ruffle. All the variations are suggested by the fashion publications, and the dressmaker can develop them from the familiar model.

The leg of manteau sleeve being just over very full, and the shoulder being full, a useful diagram to give, which any dressmaker can follow will drift the diagram on a scale of an inch to "widths of an inch." This is a very serviceable sheet, and will assist in all materials. The sleeve joins on the shoulder, and the shoulder line is gathered on the upper part. The intent is, that if lining is necessary, just like the outside, and should be of light texture.

The sleeve should not be so tight that the shoulder straightens with the shoulder, and the shoulder line should not be so tight that the arm cannot move. The shoulder should be made on the cross, as the diagonal line goes to the cross. When cut and bound carefully, the points should be held in as much as possible, so that they will not be marked. One has the shoulder line, and the other the three points and the two A's meet. Then the points will be a real big of motion sleeve, like the diagram, and the point part, will be the shoulder, or a bustle or bustle with the shoulder.

The sleeves for evening dresses are all modified balloon shape, but short, ending in some cases to the elbow, but more often finished off about four inches from the shoulder, and then the shoulder line. The sleeves should be rounded up, fitting toward the hands to permit the puff, to fall and wear well.

To add the waist to sleeves both edges should be held firmly and pressed and
