

haif the rate charged in Sait Lance Crip. The vast majority of the residents are young, energetic, thrifty and al-together desirable neighbors. If you are in this class we particularly desire you to buy a home here. The village has its own town govern-ment and cannot be absorbed by any larger city except by vote of the peo-ple of Forest Dale. The tax rate was last year 6 1-10 mills lower than in Sait Lake City, and an attempt is being made to increase the latter this year. Car service gives choice of two lines and in winter includes 1 cars an hour and in summer still more cars. The GEORGE M. CANNON COMPANY. Rooms 512-513 Templeton Building. 'Phone Bell 57.

Earth plays occasionally, why the Comet should not more than fulfill the dreams of its owners. Some time ago the Talisman struck a vein of high grade galena ore and word has been received in the local offices that an entirely new ore shoot has been encountered on a branch of ure, always to come to Salt Lake and the business he is performing consists partly of sending out materials and mated, yet but its being in the neigh-borhood of other good finds-some ore went 47 per cent lead and 17 ounces sliver-indicates that work is being driven towards a large bout of val-uable ore. Leasers sinking on the Stalwart of the Talisman group have commenced crosscutting on the 250-foot level and when but four feet of work was done, ore bearing good values was uncovered. A lease has been let on the upper levels of the Talisman and within a few days the leasers will have opened a campaign of develop-ment.

YERINGTON ONCE MORE.

Salt Lake Capital Gets Another Fortune Maker in That District.

The Yerington Copper Mountain con-The Yerington Copper Mountain com-pany, composed of Sait Lake and Chi-cago mining men, has taken up eight claims in the east range of the district between the properties of the Yering-ton Copper and Butte Yerington Cop-per comparts. J. H. Turner, J. P. Spaulding, C. D. Rooklidge, W. H. Tibbals, and others, are among those representing Sait Lake capital. In a report upon the property, L. A. Jeffs said: said:

said: "The vein is well defined for the entire distance through the Copper Mountain No. 2, Copper Mountain No. 3, Catherine, Lydia, Birdseye No. 1, and Birdseye No. 2 claims. This vein practically parallels the Yerington Copper company's vein and the sur-face showing compares very favor-ably with the latter. The formation throughout the east range is granitic porphyry, cut by a series of parallel fissures running in a northeasterly di-rection. These veins or dissures are paralleled by a number of diorit. rection. These veins or dissures are paralleled by a number of diorit. dykes, which in places form walls, one or the other, of the fissures. At the junction of the fissures and diorites we find the most favorable conditions of ore. There are also numerous por-phyry dykes crossing the country at residence lots are now worth \$250. There are \$8 distinct croppings right around the camp and assays from these croppings go \$25 in gold and sliver. Mizpah is four miles from the Nevada Northern and 51 miles south of Cobre.

The first trainload of ore for the Utah Copper company's Garfield mill was delivered yesterday.

W. A. Clark, Jr., accompanied by John Ryan of Heinze's engineering staff, arrived in the city yesterday from Bristol, in the Ploche region, where he recently purchased Colonel Ellis' E. & F. mine.

for the erection of the giant stack at the Steptoe Valley smelter at McGill is in Ely, having arrived last night and registered at the Northern. The smelt-er stack wil be the largest in the world.

E. L. Godbe has returned from Pioche. Every visit to that district makes Mr. Godbe more enthusiastic over its new growth since actual con-struction of the Caliente-Pioche branch commenced.

Col. P. C. Wyman, accompanied by G. B. Harington and wife, left for Elko, Nev., yesterday afternoon. Mr. Harrington is an expert assayer and chemist and will conduct an assaying and ore sampling plant at Elko for Col. Wyman. A complete outfit was purchased in this city.

The Yerington Ironsides is driving The ferington ironsides is driving a shaft through country rock. This plan of work was mapped out to ex-pedite work and the discovery of cop-per ore (bornite) was a surprise to all concerned. The mine is soon to be equipped with hoisting machinery, now on its way to Yerington. Tim-bers are also on their way to the mine.

case of the Ben Butler No. 6 Mileon, company against Frank E. Wilson, quieting plaintiff's title to the North Star lode claim located in Bingham. Judge Morse rendered a similar de-cree today in favor of plaintiff in the case of the New Red Wing Mining com-new against Jerome Bougard, F. E. The Last Chance, just acquired by local men who are now incorporating, can commence shipping just the min-ute the railroad is into Pioche. Work has been centered upon streaks in the bottom of a winze from the main shaft and from a streak four inches wide of ore carrying 400 ounces in silver and 49 per cent lead has been taken. Any amount of this will make the Last Chance owners rich in a short time.

GOLDFIELD.

FREE GOLD FOUND. The principal values are found in the presence of free gold but a portion of the vein carries silver bromide and in this respect the property of the Great Western differs from neighboring mines. With the whole 1,000 feet of quartz sampled for a fair average the owners received values around \$15, al-though the rock goes as high as \$50 and \$60 and some cents right at the surface of the outcrop. The highest value ob-tained in a four-pound sample was \$60.15. Conditions for development are very favorable and in this respect the mine has a number of unusual advan-tages and features. Timber is abun-dant and a spring owned by the com-pany will furfish all water needed for different purposes. The north end of the dips with the side of the hill to a gulch and then follows the other side up the north.

tance of 1,000 feet. This outcropping is 12 feet high in places and owing to its bold outlines and general prominence resembles a great dyke wall. Over 50 samples have been taken from all parts of this mass of rock and not a single sample failed to show values averaging \$\$ per ton in gold. At the north end of the immense vein \$16 can be found in almost any spot. The showings are simply wonderful, according to B. A. Perkins, who has made a thorough ex-mination of the property and the whole district and w⁴. Is conservative when discussing "mines-to-be." FREE GOLD FOUND. FREE GOLD FOUND.

up the north

WORK MAPPED OUT.

WORK MAPPED OUT. It is the intention of the company to sink a shaft at the north end of the vein to test the values at various depths while determining the extent of the ore bodies. A tunnel will probably be driven from the guilet towards this shaft and while 600 feet of tunneling will be necessary there will not be one foot of "dead work" required as the company, if it so desires, can drive into the ledge as well as sinking upon it. The vein can be thus proved up for 700 feet counting depth and horizontal de-velopment. The Hercules mine adjoin-ing the Great Western has been work-ing for five years and today can start ing the Great Western has been work-ing for live years and today can start shipping, and by so doing start a divi-dend fund. The mine has just equipped itself with machinery for mining and milling and does not owe a dollar to anybody. The Como has a mill and well equipped plant also. These two mines have been working for several years, but unlike most infants they did not gev for bein and attention. These years, but unlike most infants they did not cry for help and attention. There have been no flurrles, no booms, no rushes; nothing but quiet. "get-there-Stanford" work going on in the district, and that is all the mines are looking forward to at the present time. The Great Western crowd will build a com-bination stamp and cyanide plant when work has been under way long enough to enable the superintendent and his associates to figure out development of to enable the superintendent and his associates to figure out development on a big scale. A shipment of ore from a foot strenk of \$60 stuff will be made, at the start, however. Supt. West is a practical miner of long experience, and with such men as E. A. Perklas and the other other officers and direc-tors in the harness with him the Great. Western will be one of for the bar Western will be opened for the best within it.

Shoebridge Mill Dump is Leased-Colorado is Showing up Well.

Eureka, April 19.—George Hayes and Frank E. Higson have secured a lease on the old Shoebridge mill dump south-west of Mammoth, in the Tintic valley,

and if suitable arrangements can be made with a smelter, they will start its shipment to market immediately. They made a trip out to the dump Wed-

three feet wide and shows some very good ore, selected samples from which run 10 per cent copper. This vein will intersect the main vein at a point about 250 feet to the southeast, which in my judgment would be a very favorable spot to do some develap-ment work. "There is also an excellent showing on the Birdseye No. 2 claim. However, the development has been limited to an open cut, which simply shows the continuance of the vein. "Judging from the developments recently made on the property of the Yerington Copper company, this prop-erty will respond to development in a like manner and should prove equal-by as good, as the surface showings are identical, and in conclusion would say that I would not hesitate to re-commend the expenditure of consider-able money in the development of the Copper Mountain group." They made a trip out to the dump wed-nesday for the purpose of sampling the tailings and they are very elated with the results obtained. The old Shoebridge mill was one of the first mills to be erected for the handling of Tintic ores, the first one being the smelter built at Homansville about 1875 Copper Mountain group."

PUT NEVADA BEHIND THEM.

Russell Brothers Come Home to Get Rich in Beaver County.

Tintic ores, the first one being the smelter built at Homansville about 1875 and a few years the Shoebridge mill was put up near the McIntyre ranch. There is scarcely anything left to mark the spot where the mill stood except the old tailings dump, which contains more than 40,000 tons. The Colorado sent out a carload of ore this week and has another ready for shipment, and with fully eight car-leads in the bins and almost an un-limited supply in the mine blocked out, the future of the Colorado is certainly bright. This week enough ore for two cars was hauled to the railroad, but only one car was blied out. The trou-ble so far has been the difficulty in getting teams to haul the ore, but the company has lately entered into a con-tract with James Daniels of Provo for the hauling of the ore, and he will be on hand next week with his teams and then regular shipments from this mine can be relied upon. Supt. Roundy stated that the ore in the Colorado would compare with that which has made the Beck Tunnel such a favorite, and if anything it is a little richer. The Colorado has a double compartment shaft, a splendid holsting plant and is in every way ready to become one of the dividend nevers of the district. M. and Howard Russell, Utah boys who have been in business at Goldfield, have returned to Utah and will now join the makers of Beaver county. They have organized the Moscow Extension company for \$250.-Moscow Extension company for \$250.-600 with shares at the par value of 25 cents each. The property is in the Star district and consists of three claims, the Daly, Hub and Russe's The first joins the Commonwealth on the west, the Burning Moscow on the south and the old Hub on the north. The old Hub is now a part of the Utah Mining, Milling and Transporta-tion company's holdings. The Daly has 600 feet of the contact ledge found in that strip of the country and each in that strip of the country and each of the three claims is believed to con-tain a number of cross-fusures and ore deposits. The Russel claim has the shaft, a splendid hoisting plant and is in every way ready to become one of the dividend payers of the district. There have been repairs to the shaft going on at the Eureka Hill this week and as a consequence the hoisting of ore has been held back. The McKinley Mining company levied an assessment yesterday of one-half a cent per share. deposits. The Russel claim has the immense iron blowout which at one time supplied fluxing iron for the old Shautie smelter. A shaft will be sunk on the contact and drifting will be commenced at a depth of 100 feet. Over \$500 worth of work has been done on the property already and ore going as high as \$25 per ton has been found. BEAVER MINES IMPROVE.

MORRISON MEETING.

The Morrison Mining company held a special meeting yesterday afternoon. About three-fourths of the stock was represented and several eastern stock-holders were present. A number of the stockholders will proceed to the mines in Humboldt county today to yield the pronerty. The same of the Every mining man in this state is interested in Beaver county, either be-cause he has property within its boun-faries or because-because, well, be-cause there is so much dong down there that one bears one continual glad there that one hears one continual glad song of satisfaction over developments going on in that region. When all the good things now held or just started are opened up Beaver county will build up a reputation for herself that will place her in line with Park City, singham and other needliners. The Nevada-Utah Mining company is one of the newest contributors to the boost-ng Beaver county is getting and this company is boosting in a substantial manner. It has found copper ore in the Comet and it is believed the Comet tas the extension of the Newhouse ody. mines in Humboldt county today to visit the property. The name of the corporation was changed yesterday to the Jmlay Copper Mining company and 100,000 shares were added to the 600,000 share capitalization of the old company. The par value of the stock was raised from 25 cents to 31 per share, also. The extra 100,000 shares will be sold, it is understood, to play for further development and all at-tendant expenses. A holsing plant is tendant expenses. A hoisting plant is to be installed and as the shaft goes down, levels will be cut at each 100 feet.

The company is now cross-cuiling on the 199 and 200-foot levels and is re-olding greatly because it is believed the re found on the 200-foot level of the Newhouse mine is the same as that be-ing uncovered in the Comet. The rock ontains a big portion of black oxide on pyrite crystals, identical to those ound in the Newhouse are found in both mines and as both properties are reighbors, there is no reason, aside prom such geological pranks as old
