

MORAL TURKEYS.
A correspondent of the *Evening News* has written to us concerning the remarkable case of prevention abortion in turkeys, apparently caused by feeding wheat.

According to *Le Monde*, weevils may be expelled from a granary by placing in it a few bundles of raw hemp.

To keep earth worms from pots, a correspondent of *Vick* gives the following remedy: "I put ten drops of carbolic acid in a pint of water, and mix it with lime water. Then I add it and it acted like a charm. Killed all the worms and the plants improved at once. It has been three weeks since it was applied, and they are all in a nice growing condition, and I think that is time enough to show what it will do."

In the Bulletin Association of Wool Manufacturers, there is an article on judging wool, the author summarizing as follows: "If you find the fleece of nearly equal fineness from the shoulder to the thigh; of nearly equal length on the shoulder, rib, thigh and back; and of equal density on the shoulder and across the loins, you may conclude that the sheep is well fed."

Whatever may be said of the best time to mulch strawberries to protect them during the winter's cold and the spring frosts, my experience rests in putting on the mulch just after the ground has become frosty—say one to two inches deep; and covering between the crowns of the vines four or five inches over the crown will only put one inch. Straw, leaves, bog hay, or coarse grass litter is all that is requisite. Cor. Country Gentleman.

Dr. Anderson gives the following proportion of bones and salts to be used in making superphosphate on small scale: "One ton of inch bone, one quarter-ton of sulphuric acid, sixty gallons of boiling water, Utensil requisites, a cistern of lead, and a watering can of the same metal. A small quantity of the bones should be spread upon the bottom of the cistern, and the sulphuric acid poured in from the leaders water tank, at the same time that a proportionate quantity of the water is added from another can."

The Tulip (incorrectly "Yellow Poplar") is called by botanists and belongs to the Magnolia family. According to Gray, it is found in rich soil, Southern New England to Michigan, Illinois and southward. "It bears a handsome tulip-shaped, erect flower, of a greenish yellow color, prettily tinted with orange. Wherever it has been tested for street planting, the best results have been attained, but we fear it will grow too large for our streets, in broad ones possibly. Several of the first class nurseries grow it now in large quantities."

The multitudinous omnivorousness of the much-devouring goat, and the extreme want of particularity exhibited by that animal in his diet were well illustrated the other day at Buffalo. The poor goat being without a morsel of vegetation during the absence of the family partook of the following bill of fare: One Panama hat, three fine linen sheets, one box Havana cigars, and one-half of a new bonnet. Now the sheep-eating goat after this miscellaneous meal, or perhaps he increased his appetite in striking, we are not told. Tobacco, we have long known from actual experiment, is a weed which goats are extremely fond of, but of the hats, shirts, and bonnets, we can say nothing. —*San Joaquin*.

The Canada thistle is gradually working its way westward, having now reached Iowa and Kansas. It appeared in Illinois several years ago, but vigorous measures were taken to root it out. The war is constantly kept up. Men are employed at regular wages to dig and burn the plants, it being impossible to leave them on the ground, the root to dry and die. Wherever this thistle grows a foot hold in a community, the damage is equal to that of ten acres of all the spring land. It is a fair valuation. It is agreed that this weed was first introduced, and is still introduced, in the hay with which fruit trees are packed. It would be better to raise one's own trees, and have even inferior fruit, than to be thus burdened. Granges, agricultural societies, and clubs should make it an urgent business to watch the Canada thistle.—*N.Y. Tribune*.

DANIEL IN THE LION'S DEN

Sold at Cost of his Toys.

Come and buy them. A full supply of Buckwheat.

Flour, Oatmeal, Rice, Su-

gar, Tea and Coffee, Cho-

colate and Cocoa, Fresh

Bread, Buns and Crackers,

Spices and Fruits, Boys'

Sleighs and Express Wag-

gons, New York Factory,

Limbberger and Swiss

Cheese, Fresh Butter and

Eggs. Cranberries by the

Quart or Barrel. All Goods

sold Low for Cash, at the

Basement, No. 90 East

Temple Street.

DANIEL GRENIG.

TESTIMONIAL.

Editor Deseret News:

I had a son who appeared to be ill healthwise, causing constipation. I was unable to determine the nature of the disease which affected him. A few days after I placed him under the treatment of Dr. Price, who within a few hours and with great skill determined that the worms about forty feet long, since which time the boy has been improving. I wish you to publish this circumstance of mine for the benefit of people afflicted similarly to my boy, to whom I am sending Dr. Price.

Pls. send him a receipt of compensation can be relied on, besides the services rendered.
