The quarterly conference of the Beaver Stake convened in the Latter-day Saints' meeting house in Beaver City, on Saturday, March 28th, 1885. There were present: Of the Stake Presidency, President J. R. Murdock; nembers of the High Council, Bishops of the several wards, and a goodly rep-resentation of members from all parts of the Stake.

The usual opening ceremonies, com-mencing at 10 a.m., being attended to, the assembly was addressed by Presi-dent Murdock, followed by the Bishops giving oral reports of their several wards, with sundry remarks, counsel-ing and exhorting to an increase of hith and diligence in good works, all of which was for the most part quite satisfactory.

Recess was then taken until 2 p.m. On re-assembling in the afternoon, Flder C. II. Wheelock was also present on the stand.

President Tyler, of the High Priest-hood, offered his report, and was fol-lowed by the Presidents of other tions: after which the congregation was addressed by Bishop P. T. Farns-worth, in some pointed and earnest remarks on the signs of the times. A meeting of the Priesthood was held in the evening at 7:30 o'clock, and was addressed by Elder Wm. Fotheringham and President Murdock, whose remarks were spirited and calculated to stimulate and instruct all who were present.

On Sunday, the 29th, the house was filled to overflowing. Elder Wheelock delivered an able address on the nature of his mission MOST PERFECT MADE and the peculiar condition and circum-Purest and strongest Natural Fait Flastances that are manifest in all the communities of the Saints he has visited of late, comparing the present vors, Vanila, Lemon, Orange, Alwond, Rose, etc., davor as delicately and naturally condition of the Saints with the life of Moses and the dealings of God with ancient Israel. He was followed by

District, am

One of the great evils of the old school process of milling is low grind-ing, and its evil effects are only second to those produced by fast grinding, and a miller that runs a heavy mill is likely to look for a medicine to doctor his tour. Bread-eaters much prefer the full life and strength of the grain, and grain once killed by over-grinding and heating will not be brought to life by the best medicines.

Flour milling under the new or patnt process means, that the chop shall roll instead of slide between the bars; or, in other words, the substitution of granulating instead of grinding. It also means what could not be accomplished with the defective machinery of the old school system, namely, tak-ing the whole inside of the kernal clean out of the hull, leaving nothing but clean bran, and what is clean bran? SIMPLY WOODY FIBRE. By a process of high grinding and gradual reduction, the middlings, which contain the gluton, the most im-portant factor as a flesh-forming prinplished with the defective machinery

gradual reduction, the middlings, which contain the gluton, the most imquorums, these reports, coupled with some good advice and instructions, were received with satisfaction, and turned to the reels and graded accord-Energy, &c., it has no equal followed with statistical and financial reports of wards and Temple dona-tions; after which the congregation This means also that the miller by

In conclusion, I do not wish to be understood as being a practical miller, though as

A PRACTICAL BREAD MAKER I have devoted no little time and study to the theory of flour milling, and the two are branches closely connected. One thing, I am pleased to note the rapid strides the leading millers of Utah are making in the way of improvement in this branch of industry. Two of our most extensive and enterprising merchants of Evanston, Wyoming, use the roller mills flour of Utah, exclu-sively, in fact, there is scarcely any other than Utah flour to be got in this

March 25, 1885. district. This same flour I have used for over fifteen months, and find it makes the best bread of any flour I have used in a long experience under

Editor Deservet News: In the Semi-Weekly NEWS I noticed an extraordinory statement from the pen of Mr. McAllister, to the effect that, in the process of the consumer lacked 12 out of 15 in-

gredients of which the wheat berry is composed. Such a statement is cal-culated to mislead the bread consum-

ers and bring discredit on the leading millers of Utah. Such an assertion might have been correct in some exceptional cases a few years ago under the

The

OLD PROCESS

of flour milling, where the boss, in-stead of going into a nice warm mill on a frosty winter morning and finding everything going right, would enter an ice-bound mill of the old breast-wheel style with a couple of half starved youths, trying to cut her loose and knock her to pleces at the same time.

NEW PROCESS
