

MINING, BUSINESS AND STOCKS.

EAST TINTIC DOING SOME RAPID WORK

Tintic Standard to Put in New Shaft—Will Sink to Depth—Big Hill to Get Ore.

Work is moving along at a rapid clip in the East Tintic district and inside of a few weeks some good things should be reported from that territory, according to recent visitors there.

The Tintic Standard, which has been one of the steady workers in the district, intends to put down a new shaft at once. This will be several hundred feet from its present workings and will be somewhat west of north of the present shaft.

It is declared that the incline shaft which is now being used and which has reached a depth of 415 feet, does not give the satisfaction that a vertical shaft would. The new shaft will be sent to the 600 foot level before any work of consequence is started, unless something should be found in sinking.

Manager E. J. Raddatz of the property received word last night that the north drift on the 400 foot level had caught the big vein for which it was headed. The vein is almost vertical and has been cut for 15 feet without reaching the further wall. No ore has been encountered although the vein is filled with talc, manganese and iron material, such as is generally found close to the ore bodies in that district. The character of manganese that is being taken out is almost identical with that taken from the Eureka Lilly, which lies further up the canyon. The drift is almost under the big iron blow out that crops out across the canyon from the workings.

In the south end of the workings on the same level a drift is bearing another large vein which parallels the one just opened, and there, likewise, most favorable conditions exist, bunches of galena ore having already been encountered in one or more of the cross fissures.

The north drift in the Big Hill property is drifting along a highly mineralized vein that should be productive of a good ore body. The formation is in line, such as is the making of ore in that country. A decomposed quartz is making in the face of the drift, which is going from the main drift and following the strike of the vein. Persons who recently visited the property assert that within the next 30 or 35 feet some good things should be encountered.

Work is being pushed with considerable vigor at the East Tintic Development or Ralph claim. Here considerable good ore will be taken out shortly. As soon as the drift reaches the Eureka Lilly good steel galena ore has been taken out and there is considerable ore in sight.

It is understood that the Tintic Standard will increase its present holdings in the district and add to its territory.

SLOW DAY FOR MARKET.

Stocks Show Little Inclination to Move—Raid on Columbus Con.

There was scarcely a ripple on the stock market this morning that showed an inclination to do anything. During the forepart of the week trading has been good, but today it fell down miserably. The only feature was the run on Columbus Consolidated, which knocked the stock down 10 points and left it the victim of the market.

Columbus Consolidated opened at \$2.85 and in the sale of small lots, the stock was quickly hammered down to 2.75, where 900 shares were unloaded. Iron Blossom showed but little activity. Golden Reef was one of the latest stocks on the board, sold for 12 cents. Newhouse is still weak and 50 shares were sold today at \$2.70.

The total number of shares sold this morning was \$3,970, and the amount represented was \$35,951.45, thus showing that the amount represented in the sale of each share was better than \$1.

On the curb market an even dozen stocks made their appearance, but no sales were made. Tintic Volcanic received a bid of 24 cents. Chief Consolidated, which is expected something big, received a bid of \$1.55.

EXPERIMENTING AT RAY MILL.

Ray Consolidated Copper Company is Putting in Row of New Cottages.

Kelvin, Ariz., May 14.—The big wheels of the Ray Consolidated mill were put in motion several days since and everything is again cutting fine. Many experiments have been made of late to ascertain the best way in which to handle the ore. The mill is now running on a regular basis and the mill proper and over the washer tables. This information will be of great benefit when the installation of the new mill is completed. A large new plant begins this summer.

The standard gage line to the mines to take the place of our present narrow gage system, seems to be the top of the day, and it will be noticed from what he sees that the railroad construction will begin first.

The Ray Consolidated copper company anticipates building on the staff house hill north from the new large water reservoir and overlooking the town. This is a most attractive location, perhaps the most desirable in town and when several of the buildings are completed a very great improvement will be noticed. The course the company will put water, to each of these lots. With electric lights, green lawns, etc., the hill will be a most desirable place to live. The cottages will be occupied by the married men who are employed in the company offices.

CONCENTRATES.

Although the Montana Mining company has been at work but a few days the management announced Thursday that the shaft at 15 feet had run into 18 inches of ore. The ore is a fine gold, 3.9 ounces silver and 7 per cent lead.

According to Superintendent John Roundy, the 300 foot level of the Colorado has struck ore. The ore is a fine gold, 3.9 ounces silver and 7 per cent lead. Although nothing definite has been ascertained, it looks as though ore would be found at greater depth in the mine. It is believed that the Sioux and Iron Blossom may become still greater.

Col. James L. Hackett of Louisville, Ky., president of the Ohio-Kentucky and one of the heavy stockholders in the Pioche Consolidated properties at Pioche, is in Salt Lake City. He will probably go to Pioche before continuing his trip home.

A telegram received yesterday by W. H. Hubbard of Boston, correspondent said: "It is rumored here that Lawson is starting a campaign in Ohio Copper. Look for higher prices. Sold today at \$7.50. Ohio Copper has not yet developed."

Through an ore bucket on the tramway from the Columbus Consolidated jumping out of business, there has been a great deal of talk. The ore is a fine gold, 3.9 ounces silver and 7 per cent lead. This was finally adjusted this morning and more teams than ever are now at work. It is expected that there will be no more delays and close to 100 cars will be sent down to the smelter from Sandy where the cars are loaded.
