Dexter-Tuscarora Treasury Stock Will Bring \$100,000.

THE NOVEMBER SHIPMENT.

Strike in the New Sensation at Cottonwood-May Day Looking Well -Tesora Improving.

Tomorow is the day set for the payment of the sum of \$100,000 due on the purchase of 100,000 shares of treasury stock recently set aside by the Dexter-Tuscarora Gold Mines company payment of the outstanding debts of company. Most of the stock was subscribed for by local partles, the present directors of the company coming in for much of the stock issued. The stock was over subscribed by some \$20,000. The payment due tomorrow will not enable the company to quite pay off its debts but with the profit from the November output of bullion and cyanides all of the debt will be met, and the company will start the new year free from debt. The amount of the indebtedness is said by the secretary to be a little over \$102,000. The November shipment which reached town today is valued at \$12,700. Of this amount \$4,200 represents the value of the cynnide product the balance of \$8,500 being the value of the bullion out-put. Reports from the mine state that put. everything is moving along nicely. An average of about 100 tons of ore is being milled daily with the above result.

NEW SENSATION STRIKE.

Assays of Latest Samples Show Very Gratifying Values.

W. J. Lawrence left for Big Cottonwood this afternoon to examine the reported strike in the New Sensation tunnel. At a distance of nearly 900 feet from the mouth of the tunnel a body of fine ore was tapped a few days ago. A number of samples were sent to town and the returns today show very gratifying values. Some of the samples carried as high as 45 per cent lead, with 18 per cent iron, \$3.60 in gold and from 25 to 35 ounce silver per ton. The ore has been entered between four The ore has been entered between four and five feet and an excellent body of clean ore is said to be exposed. The New Sensation is one of the most promising prospects in Cottonwood. Ore has been exposed in several places and if this strike proves to be the main chute for which the management has been driving the provent of the several places. been driving the property may be expected to soon make a name for itself as a producer.

THE BIG LAWSUIT.

The Testimony is All in and the Argument Begins Tomorrow.

The testimony in the Grand Central-Mammoth case closed yesterday afternoon, and the argument will be taken up tomorrow morning by George Sutherland in behalf of the Mammoth. The day's proceedings developed many ob-

jections on the part of the attorneys. Expert S. W. Tyler testified regarding

gives promise of better or more lasting results The first step in the manufacture of cyanide.said Mr.Carraway,is ferrocyan-ide of potassium. This process consists in fusing a mixture of carbonate of pot-assium (pearl-ash) iron fillings, or turnings, and waste organic matter, such as fragments of leather, old boots, shoes, etc. The fusion is accomplished in simula preseducation. in simple reverberatory furnaces re-quiring comparatively little fuel. After fusion the fused mass is macerated in water, filtered and evaporated when the crude ferrocyanide is crystalized. and where necessary purified by re-dis solving in water and re-crystalization. The ferrocyanide being then fused with carbonate of potassium in black-lead crucibles cyanide of potassium results, is poured out and molded into cakes ready for commerce

Commercial cyanide as used in the ex-traction of gold, however, is not a pure cyanide of potassium being a mixed sait of eyantide of potassium and cyan-ide of sodium. This is due to the fact that in fusing the ferrocyanide and carbonate of potassium all the carbonate is not converted into cyanide and the mixed carbonate and cyanide cannot be separated save by expensive treatment. Therefore, as the cyanogen of the cyande is the useful constituent in the extraction of gold as mixed sodium and potassium sait is made by fusing the ferrocyanide with both carbonate of sodium and potassium, yielding a product which carries practically as much cyanogen as pure cyanide of potassium would, owing to the fact that cyanide of sodium carries 53 per cent of cyanogen, while the potassium salt only carries 4 per cent. In this way the commerical salt is made to yield an amount of cyanogen equivalent to \$8 per cent of pure cyanide of potassium regardless of the unconverted carbonate still exist-

ing in it. Cyanide cannot be made without the ferrocyanide and yet by some strange reasoning Congress has placed a tariff on cyanide, but not on the ferrocyanide. As a result the ferrocyanide is imported free of duty, fused with the carbonates, which are produced in plenty in the United States, and the manufacturer escapes paying the duty on his cyanide. The consumer, however, has to pay just as much for it as if the duty had been The establishment of such a plant

would be a valuable acquisition to the State's industrial enterprises. It would save to the consumers much in freight. besides paying a handsome return on the investment. The building of a ferro-cyanide plant would require considerable capital, while a plant for simply making cyanide out of ferro-cyanide would require but little means and return good profit and be of much benefit to the consumer. It is possible to man-ufacture cyanide of potassium in this city for one-half of the present price.

Location Notices Filed.

Provo, Dec. 14 .- George Beck and John Beck have filed notices of location of the Belle Spring mining claims Nos. 3 and 4, situated about seven miles west of Lake near Cedar Point, and the Jor-dan Power line running through at the west end line and about two miles west of the Sait Lake and Western railway. Dalay Johnathan S. Page Jr., has filed no-tice of appropriation of three cubic feet per second of the waters of Peeteetneet, or what is commonly known as Payson Creek, for irrigation purposes. Business was very good on the exchange today. The volume was not as great as that of yesterday but a great er number of stocks were traded in. Lower Mammoth continues to attract a great deal of attention in the pit. Nearly 6,000 shares were traded in at prices ranging between \$1.18 and \$1.25. The opening price was \$1.18 and from this figure the stock climbed 7 cents per share but fell back to \$1.20% before the call closed.

May Day was also very active today though prices weakened during the call. At the outset the stock sold at 45%, but with the sale of something like 9,000 shares prices fell off to 44%on the last sale.

Daly-West let go a 50-share block today at \$26.60, while Consolidated Mer-cur was traded in as low as \$3.97. Rocco-Homestake continues to sell at 84, while Silver Shield moved up to 26

Sacramento remains quite firm at 9½. Yankee Consolidated was quite active today though a decline is noticed in prices. The stock opened at 12% but declined to 11 with the sale of 6,200 shares. Ben Hutler was an active trader today at 11/2, while Northern Light sold at 1%

CHARGED TO VACGINATION.

Statement that the Spread of Smallpox Was Because of It.

Some Views of One Who Has Been Familiar With the Disease Here and Elsowhere.

Salt Lake City, Dec. 13, 1990.

To the Editor:

I wish to call your attention to the fect that the spread of smallpox in the western part of town is now being charged to vaccination, in a large degree. The way is this: In two families where the disease first broke out in the vicinity of the Lincoln school, the parties were blamed for permitting their children to attend the school, and to mingle with other children. Now that the quarantine is raised, the parties are able to make their defense which seems a most reasonable one, and I send it for the information of the "News" readers, that the families accused of spreading the disease may be set before the public in a proper light. One of them puts the case in this way: "My children were vaccinated early in the year, and the vaccination took effect, so that the doctor said it was successful, and they were proof

was successful, and they were proof against smallpox. Of course I believed him, for I thought he knew, and that he would not misrepresent. When my children took ill a few weeks ago, I be-lieved it was only a slight cold. I never suspected smallpox. When a few pus-tules came, I believed they were only cold access for the children were not cold sores, for the children were not then ill. When it was suggested that

years than before, and so vaccination becomes a danger to them. In the anti-vaccination data that I have knowledge of by observation, the strongest cases that have general application, come from this class. Now aside from a discussion of whether or not vaccination is good at times when a smallpox epidemic threat-ens, in which case I might be a little prejudiced in favor of vaccination the sum of a compulsory vaccination the sum of a compulsory vaccination law is 1 .-- If it is advisable to kill off people whose constitution cannot bear vaci-nation, then compulsion in a time when there is no threatened epidemic is a means to that end. 2 .- If it is desirable to arouse latent diseases that otherwise might be avoid. ed for a number of years, let us have

ten meet with serious injury from vac-chation. The common judgment is that it awakens in persons of advancing

years the accumulating causes of death

and rouses these to increasing activi

The human system is also less able of ward off hereditary troubles after a years than before, and so vaccinatio

compulsion. 3 .- If it is desirable to shorten the 3.-If it is desirable to shorten the lives of aged people a few years by in-creasing the growing risks among them then pass a compulsory vaccination law

for every person in the State. It isn't hard for the legislators to learn the real facts that are to be faced.

They may be befuddled by extreme provaccinationists and anti-vaccination-ists, but they can get at the real facts, which are few and simple. The lawmakers need make no mistake. If they rely on extremists or persons with an axe to grind, they may not be so safe. I wish them to do the right thing. I have no fears of vaccination because of being aged and having seen consider-

able smallpox, for I am AN IMMUNE. OLD CITIZEN PASSES AWAY

the mineralization certain drifts from the 600 level. He would not con sider that a vein was indicated by the presence of 4-10 of an ounce in silver per ton. That quantity of sil-ver might be found in any mineralized locality. Regarding the gold and silver in sea water Mr. Tyler said that it might have been urged in favor of Sandberger's theory that the mineralization of veins was formed by leaching of the country rock surrounding the veins.

Foreman Pat Donnelly of the Grand Central testified to taking samples of rock from a clay seam in a drift running from tunnel B which were deliv-ered to R. H. Ellis. Mr. Ellis testified that he had assayed the samples hand-ed him by Mr. Donnelly. He had also analyzed sea water, and the highest assay secured was 3½ cents per ton in gold and 8-10 of an ounce silver. He had tested the country rock of various districts and found that it contained traces of gold and silver. The samples of sea water come the samples of sea water came from the Pacific ocean, one of them being taken from San Francisco Bay. He did not think that the gold placers at the head of the Sacramento river had anything to do with the gold values in the water of the bay. Mr. Ellis had also found the water of Great Salt Lake to contain 2½ cents

in gold per ton. Surveyor C. P. Brooks then testified that certain claims on map exhibit 22 were platted from aps in the U. S. sur-

veyor general's office. Judge Dickson offered in evidence all of the Grand Central maps from 1 to 22, when John M. Zane objected to maps 2 to 10 on the ground that certain workings had been left out. Other maps were objected to on the ground that they were deceptive, all of which ob-jections were overruled by the court. Donald B. Gillies was the first witness

called in rebuttal and was asked to produce some samples which he had taken from the Butterfly stope. An objection was raised, and after a lengthy argument between the attorneys. the tion was sustained. W. L. Wylle R. H. Terhune and M. L. McDonald tesed on several smaller matters, when both sides rested. Before the court adjourned it was decided that Judge Higgins' term of office would expire not later than January 7th, before which time it is expected that a decision will be rendered.

AT THE MAY DAY.

The Company Will Now Ship at Least Four Cars Every Week.

A telephone message received today from the May Day at Tintic conveys the news that a steady improvement is tak-ing place in the mine. Four cars of ore were shipped from the mine today, and the superintendent expresses his belief that at least that much can now shipped weekly for an indefinite period. A big body of clean galena is now re rted which runs between 8 and 15 feet de. The ore runs well in lead with wide. \$2 or \$3 in gold per ton.

A PROFITABLE INDUSTRY.

The Manufacture of Cyanide of Potassium Offers a Good Field.

The growing application of the cyanide method in the extraction of gold from its ores makes the manufacture of cyanide of potassium in or near the in cyannes of potassium in or near the mining districts a question of no small moment. It is also an industry which will yield to the manufacturer a good and substantial profit. All the cyanide at present used in the Rocky Mountains is hauled from the Activatio acchement at present used in the Rocky Mountains is hauled from the Atlantic seaboard, thereby incurring considerable expense in freight rates. In addition there is a tariff on its importation, although the manufacturers can and do avoid the dury as will space.

tais duty as will appear. In the opinion of Mr. Davis S. Car-raway of this city, there is no industry more needed in the West, and none

The Taylor-Brunton Sampler reported thirteen cars of ore from Tintic and one from Stockton today.

The new mill for the Butterfield Mincompany of Bingham will be running about the end of the month.

The Bingham Copper and Gold com-pany had a carload of siag at the sam-pler today from the Pascoe slag dump.

John C. Sullivan of the Raymond, who was in town today reports that the face of the drift from the 700 level is now 400 feet from the shaft and is in mod localing acceleration. good looking rock.

The Ajax had a car of ore on the market today. Mr. Welr says it will sometime after January ist before the expected ore shute will be tapped on the 1.000-foot level.

An assessment of one-fifth of a cent per share has been levied by the Cen-tral Mammoth of Tintic, to pay the Valeo costs of the assessment work now being done.

The third monthly dividend of the Rocco-Homestake Mining company will be paid on January 10th. It will amount to \$4,500 or 115 cents per share. The books will close on January 5th.

A force of men will shortly be put to work sinking on the new strike off the tunnel level of the Honorine, where a fine body of lead ore is exposed. A winze has already been sunk 35 feet on the ore.

Col. Heffron, who came on from Tintic this morning reports fine clear weather in Tintic. Two drifts are still being pushed in a southwesterly direc-tion on the 300 and 375 levels of the Tesora, one of which is looking espec-lally well. Some 54 cars of ore have been shipped from the Tesora since Nov. 1st. The Shoebridge is also showing an 8-inch streak of good ore.

The assessment work on the May-fewer Mine situated in Pine Canyon, has been recorded the \$100 worth of work having ben completed by A. A. Avery and G. W. Read, they report a fine showing in the mine which is now down about fifty feet and they struck about three foot of soft ore which giv promise of leading to something rich in the future, owing to the severe storm. which was raging at the time, they were unable to reach the mine again before returning, so that they left some splendid specimens of ore on the dump which they hope to bring home in the spring.

De Lamar Lode: The coal strike on Grassy mountain seems to be assuming considerable proportions. It is called the Garrison coal mine, and was discovered by fike Garrison several year ago. Work in development has been prosecuted, and it is said there is about six miles of coal visible. This has been located. The locator is Ike Garrison. The coal has been tested successfully and everything is favorable for one of the best anthracite deposits in the West. An expert is on the ground watching the development-a representative of some Eastern parties, prob-

Headache Is often a warning that the liver is torpid or inactive. More serious troubles may follow. For a prompt, efficient cure of Headache and all liver troubles, take Hood's Pills While they rouse the liver, restore full, regular action of the bowels, they do not gripe or pain, do not irritate or laflame the internal organs, but have a positive tonic effect. 25c. at all druggists or by mail of C. BIC DEMAND FOR WABASH.

Blocks of Five Thousand Shares Changed Hands at Advanced Prices.

Almost Everything Was Higher Though There Was a Liberal Sprinkling of Declines.

the opening of the market was the urgent demand for the Wabash securities. Blocks of five thousand of the preferred changed hands and the price advanced 15; for both preferred and common and 2% for the debenture "B" bonds. There were very large transactions also in the Erie stocks but the pressure to re-alize forced them below last night's prices, though there were sales a little later at a fractional advance. Sugar suffered to the extent of nearly two points from the story of projected competing refineries. The majority of stocks were higher but there was a liberal sprinkling of declines. An enor-mous speculation in the Wabash issues continued, the common stock rising to 14 and the preferred to 26%. Aside from these, St. Louis and San Francis-co common and second preferred rose a point and New Jersey Central, which has been notably weak of late, advanced 14. There were heavy dealings in the rest of the coalers but they generally fell off from the opening prices. The market elsewhere showed distinct

heaviness, free selling appearing under

cover of the strong spots. Amalgamat-ed Copper lost 1%, smelting, 1%, and Tennessee coal, 1%. Sugar continued

CHURCH NEWS. (mmmmmm)

PRIMARY CONFERENCE.

The Primary conference of the Salt Lake Stake will be held in the Assem-bly Hall Saturday, Dec. 15, 1900, at 10 o'clock. An interesting Christmas pro-gram will be rendered by the children. Parents and all interested are invited to be present. A good attendance of officers and children is desired. Prof. Prof. Stephens will have charge of the singing.

CAMILLA C. COBB, President.

LADIES' MEETING.

The regular Saturday's meeting will be held tomorrow, in the Fourteenth ward assembly rooms, at 2 o'clock. A good attendance is desired. M. I. HORNE, President.

DAVIS STAKE CONFERENCE POST-PONED.

The Davis Stake conference, advertised to be held on Sunday and Mon-day, the 23rd and 24th inst., is post-

"I was also very bilious and consti-pated most of the time for eight years, and became so nervous that I was un-able to do any mental labor and was fast approaching a condition where there would have been no help for me.

and physical wreck. "I sometimes think the all-wise providence looks after us in trouble, at any rate, when I was in despair a friend urged me to give up coffee entirely and use Postum, giving the reasons why. It was hard for me to believe that so common a beverage as coffee was the common a beverage as concer was the cause of my trouble, but I made the change, and from the first trial ex-perienced a benefit and improvement. My complexion has improved, the ner-My complexion has improved, the her-vousness gone, as well as the bilious trouble and sleeplessness, and I am completely cured of sluggish circula-tion. In fact, I am well, and the rethen ill. When it was suggested that they might be getting smallpox. I said no, they had been vaccinated, and were safe against it. My confidence in vac-cination and the doctor's statement was so great that I thought no further of the matter then, and allowed the children to go out. I never would have done so, and exposed the public to the discose if I had not thought them wafa disease, if I had not thought them safe through vaccination. I was as much surprised and chagrined as any could be when the doctors said my children had smallpox, after being suc-

cessfully vaccinated. The statement of the other party is in substance the same. The confidence in vaccination as "the only known preventive" was perfect. This is the sum of the charge against

vaccination as I learn it from the peo-pic in the locality, who believe largely that if there had been less confidence in the preventive quality of the vac-cination there would have been less smallpox.

I have seen very many cases of smallpox, here and elsewhere. I have seen very many cases of vaccination. Sometimes people die of smallpox, and some-times they die of vaccination. Sometimes vaccination seems to alleviate smallpox, and sometimes it does not. Sometimes the effect of vaccination is worse on the subject than smallpox, and sometimes it is not. There are some people who, unvaccinated, will not take smallpox. There are some peo who, vaccinated, will not take lipox. Whether it is the natural smallpox. immunity that has saved them in both cases cannot say; neither can the tors. I have seen as many smallpox cases as the average doctor in this part of the world. During the period since vaccination

was introduced the ravages of smallpox have decreased as the statistics show. There also has been greater care

sanitary matter-much greater. Is it the vaccination, or the improved sanitation. Some doctors say both; some vaccination; some say sanitation. There is no definite knowledge. I believe that the extra care people usually take of themselves when vaccinated in a time of smallpox goes a long way toward keeping them from the disease. But if they neglect to take the care, the vaccine does not always protect them. No competent, responsible, experienced physician will say that vaccination is a sure preventive of smallpox, though most of them believe it is a palliative. Only amateurs claim positive protec-tion. I believe, myself, it is a palliative in many cases. My belief is based on observation. I do not claim positive knowledge.

Now as to compulsory vaccination, sought to be introduced in this State, by law. I have seen its effects. Here are some of them:

1 .- A compulsory vaccination law affects all persons and all seasons. Un-der such a statute, those individuals who are liable to the dangers of vac-cination are forcibly subjected thereto when there is no smallpox about. To them vaccination is a serious menace which at best should not threaten them except in times of smalpox epidemic. Under a compulsory law, the risk to them is taken without due occasion. 2.-Vaccination, compelled in times of no danger from the contagion, often awakens to permanent injury of the in-

dividual latent diseases that without it. might not be given life, or might be eradicated in time from the system. This, as every doctor knows, is not a thing to play with. 3.-Cases of bad results in vaccina-

tion, compulsory or otherwise, are not as numerous among children as among grown folks. But there are bad results 4.-In adult persons under 40 or 45 years of age, who are in good health, vaccination usually causes a few days' sickness, considerable pain, and then the effects apparently pass away. Such vaccinated people often escape smallpox when they come in contact with it. 5.-Adult persons who are in poor health commonly meet with serious and often permanent bad results from vac-

6.-Adults of upwards of 45 years of-

Had Passed the Seventieth Mile Stom and Until His Last Hiness Was Very Hale. Andrew Cahoon died at his home in

Murray, Salt Lake county, yesterday afternoon, at the age of 76 years. He had been confined to his bed for a month, and had suffered accutely for five or six months. His affliction was a stomach trouble which it was impossible to cure or even mitigate. Prior to his last sickness he was a strong, well preserved man.

He was born at Harper's Field, Ohlo, August 4, 1824. He was a son of Reynolds and Thirza Cahoon, who were among the pioneers of Utah. In early life he was conected with the "Mormon" Church, but severed his rela-tionship with the Church. He had three wives, Mary Carruth, Margaret Carruth, and Jennet Young, a widow, all three being sisters. He is survived by seven sons, of whom he had nine, four daughters, all who are left out of ten; fifty-nine grand-children, and nine great grand-children. His three wives are also living. He possessed a strong character in many respects, and his honesty was absolute. Many friends mourn his loss. His funeral will be held from his late residence in Murray at 1 p. m. Sunday next.

DIED.

LARRABEE-At New Albany, Ps., Dec. 6, 1900, Heber, son of T. T. and Mattle L. Larabee, aged 5 months and 12 december 12 decembe 13 days.
