

## OUR OWN STATE.

The branch office of the Deseret News in Ogden is at No. 466 Twenty-fourth street, where advertisements and subscriptions will be received. The "News" is delivered by carriers in Ogden every evening on the same terms as in Salt Lake City.

## OGDEN NEWS.

OGDEN, UTAH, - NOV. 29, 1901.

### GENEROUS THANKSGIVING.

Dr. Condon Gives a Feast to the Newsboys in Memory of His Daughter May.

Ogden and Salt Lake High School Football Teams Enjoy a Banquet.

Thanksgiving day was observed in Ogden in a very quiet, but happy manner. All places of business throughout the city were closed and a general holiday was had by everybody. Appropriate services were held in the various churches. One of the most praiseworthy events of the day was the sumptuous feast which was given by Dr. A. S. Condon to all the newsboys and poor residents throughout the city, as a memorial to his little daughter May Condon, who died in the year 1881, at the age of eleven years. The memorial feast was given in the lecture hall of the Congregational church in connection with a dinner served by the ladies of the church to the public. Over one hundred tickets were distributed among the needy little boys and a few little girls and as they presented their tickets at the entrance, they were ushered into the hall and given a seat at one of the tables and served with a delicious meal consisting of turkey, with dressing, potatoes, cranberry sauce, salad, celery, bread, cheese, plum pudding, apples and coffee. No boy or girl was permitted to leave the hall until fully satisfied. During the time they were eating the boys sang with sweet piano music, and truly the poor boys and girls of Ogden were never feasted more royally than they were yesterday. The worthy doctor intends continuing this memorial feast each Thanksgiving so long as he may live as a loving remembrance of his sweet little daughter who was born in Ogden March 11, 1888.

The dinner served by the ladies of the Congregational church, was patronized by many people, and in connection with the dinner they had four booths: fancy work and apron booth; doll booth; handkerchief booth, and reception booth. The hall was exquisitely decorated in the colors of the Ogden and Salt Lake high schools, viz., yellow and black and red and black. After the football game, played between the two teams yesterday at Glenwood Park, the Salt Lake team being entertained by the Ogden team at a banquet served in the hall at the expense of the Ogden high school.

There were many throngs throughout the city during the evening, which provided pleasure for everybody.

### BRIEFS AND PERSONALS.

Alma H. Chambers, who is attending school at the State University, Salt Lake, spent Thanksgiving with her parents in Ogden and will return to school again Monday.

Roscoe Breiden, of Salt Lake, was an Ogden visitor yesterday.

D. H. Perry, Jr., of Salt Lake, spent Thanksgiving in Ogden at the home of his mother.

R. S. Campbell and LeGrande Young were in Ogden today.

Dan Sullivan, the well known contractor at Kemmer, Wyo., came to Ogden to spend Thanksgiving with his family.

A large number of Salt Laker came to Ogden yesterday with the football team.

W. T. Wesson, Gholsoneville, Va., druggist, writes: "For One Minute Cough Cure gives perfect satisfaction. My customers say it is the best remedy for coughs, colds, throat, and lung troubles."—Gode-Pitts Drug Co., corner First South and Main streets.

## PROVO.

COMPANY G. N. G. OF N. Committed for Its Efficiency by Col. Land—Rabbit Slaughter.

Special Correspondence. Provo, Utah Co., Nov. 29.—Col. Lund, Inspector general N. G. U., visited Provo yesterday, and inspected company G. of the National Guard. Lund was highly pleased with the efficiency of the company, and expressed regarding the work of Captain Buell and his boys, saying the company was superior to any other in the state. His knowledge of the manual of arms, as shown by its drill.

COURT NOTES. Suit of foreclosure of a trust deed has been commenced by Leroy D. Thorpe of Illinois against the Assyrian Asphalt company, for \$150,000 principal, and \$37,500 due for interest coupons which were not paid. The suit is on a trust deed, given to secure the payment of \$150,000 bonds issued by the asphalt company, the deed covers the mines of the company in Spanish Fork canyon and vicinity. It is alleged that the defendant company defaulted in payment of the interest coupons and since March 15th, 1901.

In the case of Thos. Boardman et al. vs. Provo city, et al., Judge Booth today rendered a decision in favor of plaintiffs, holding that under the resolution of the city council making the levy of taxes the city had no authority to collect taxes on the property south of Provo city, which has been segregated from the city. Defendants were given forty days in which to move for a new trial.

In the matter of C. E. Malmstrom et al.; ordered that the property be turned over to executor.

GARDEN CITY NOTES. About forty-five sportsmen went to Juab yesterday for a hunt. They returned with about 1,100, which were distributed to the people of Provo today.

John Richards and May E. Hosoa, both of Cripple Creek, Colorado, 27, were married here yesterday, by Elder H. S. Pyne.

"Hunting for Hawkins" was presented before a large house in the opera house last evening.

The Tabernacle choir is now engaged in practicing for the concert to be given early in December, in which Miss Lulu Gates will appear.

SPANISH FORK. Educational Meetings—Thanksgiving Exercises and Services.

Special Correspondence. Spanish Fork, Utah County, Nov. 29.—The schools of Spanish Fork are doing excellent work. Sixteen teachers with a united board of education, are working very hard to advance the educational interests of our town. The patrons are also desirous of aiding the

teachers, this was shown at a parents' meeting held Wednesday evening, Nov. 28, in which a large number of parents listened with great attention to the teachers and students, while they showed by class exercises the methods used in teaching language, arithmetic, broken clocks and spelling. All were well pleased and returned to their homes feeling that the parent and teacher have the same great aim, that of advancing the child.

Saturday evening the patrons of Leland met with the teachers. A good program was rendered. Those subjects which tend to bring a better spirit between the home and school were freely discussed.

Thanksgiving exercises were held in all the schools Wednesday afternoon. The different churches on Thursday held Thanksgiving services.

Kodol Dyspepsia Cure is not a mere stimulant to tired nature. It affords the stomach complete and absolute rest by digesting the food you eat. You don't have to fast but can enjoy all the good food you want. Kodol Dyspepsia Cure instantly relieves that distressed feeling after eating, giving you new life and vigor.—Gode-Pitts Drug Co., corner First South and Main streets.

## KOOSHAREM.

Peculiar Freaks of the Recent Earthquake.

Special Correspondence. Kooshare, Sevier Co., Nov. 26.—Excitement during the recent earthquake did not run as high among the people here as in some other places, although some houses were cracked, plastering fell, milk and water spilled, bottles were broken, clocks stopped and others that had stood still for some time began their ticking and have been running ever since. There is no record of any one being brought to his knees voluntarily or otherwise, but some that were already on their knees were brought to their feet in a hurry and ran out to see if the house was falling.

There is an electric belt here that the people are lighting, and an old gentleman has just put it on and got into bed, his wife thought that the lightning was doing its worst work.

When the noise started and the houses began shaking, some people thought that the boys were shaking windows or trying to hit their houses over while others imagined wagons were running against their houses.

One little damage was done in town. One mile east of town, however, there is a piece of meadow land on the foot-hills sloping back from Otter creek that was considerably shaken up. It contains many small springs and in places is quite soft and boggy.

The center of this pasture the earthquake played wild havoc. A spot from 50 to 100 yards wide and 300 to 400 yards long, the earth is in a wonderful shape. In places it is sunken some four or five feet, other places have been thrown up six or eight feet high. Mounds of soft, boggy earth as large as two or three houses have been thrown up. At the foot of the hill there was a small irrigating canal. For a distance of forty yards the earth has slid down and covered the canal and Otter creek, forming a very rough dam on the level meadow. Some rods of the canal is covered to a depth of 12 feet, that is the narrowest place through the dump. One thing that seems curious is the fact that most of the sunken earth and that which has slid down the hill, and nearly all of the patch of willows, are right side up. The land is much cracked; some of the openings are three feet wide and all are filled with water.

Our district school teachers, Misses Anna Erickson and Virginia Stoker, are going to Annabella to spend Thanksgiving.

Many of our young men are leaving town this winter, some going off to work and others going to attend school.

A boy was born to Mr. and Mrs. Louis Hatch this morning.

C. M. Phelps, Forestvale, Vt., says his child was completely cured of a bad case of eczema by the use of DeWitt's Witch Hazel Salve. Beware of all counterfeits. It instantly relieves piles.—Gode-Pitts Drug Co., corner First South and Main streets.

## LEIGH, IDAHO.

Death of Mrs. Cecelia Swann—Sunday School at Badger Creek.

Special Correspondence. Leigh, Fremont county, Idaho, Nov. 26.—Mrs. Cecelia Swann, of Haden, died last Friday, Nov. 22. She had suffered with dropsy for about two months. She is the wife of Postmaster Samuel Swann. She was born in Union Fort, Utah. In 1848 she was a dutiful wife and a kind and loving mother. The funeral services were held in the Haden hall, under the direction of Bishop E. Little. Comforting words were spoken by Pres. D. C. Briggs and others. A long line of vehicles followed the remains to her last resting place.

A Sunday school has been organized on Badger Creek.

We are having lots of wet weather. Hay does not seem so scarce as it was some time ago.

Missionaries of the Josephite church have made their appearance among us.

Lewis Ockerman, Goshen, Ind.: "De Witt's Little Early Risers never bend me double like other pills, but do their work thoroughly and make me feel like a baby."—Gode-Pitts Drug Co., corner First South and Main streets.

## SOCIAL AND PERSONAL.

Yesterday was a day of delightful home functions in a social way, and hardly a household but had its guests bidden to partake of the home cheer and hospitality. Christensen's dancing matinee, "The Wedding Day" at the Grand, Miss Barry's matinee and the football game were occasions that drew people from their homes, but each was crowned by the time-honored Thanksgiving dinner at home or abroad.

Mr. Leslie Young is expected home from Paris today.

Mrs. Mabel McClure has returned from California.

Mrs. Chester E. Coulter, of Ogden,

arrived today in the city, and was one of the speakers at the Ladies' Literary club this afternoon, the occasion being "Brother's day at the club." She will remain until Sunday.

An executive session of the Woman's Republican club was held this morning at the residence of Mrs. Helen Kimball.

The Pan Hellenic society will meet tomorrow at the home of Miss Seesley, 134 E. street, at 2:30 o'clock.

Mrs. J. D. Wood left today for Chicago, to purchase furniture for her new home.

Miss Ella Cochran, of the Lowell school, left today for her home in Missouri, where she will be married on Christmas day to Mr. James Fallow Vail, of Chicago.

The high school ball takes place this evening at Christensen's.

DeWitt's Little Early Risers never disappoint. They are safe, prompt, gentle, effective in removing all impurities from the liver and bowels. Small and easy to take. Never gives or distress. Gode-Pitts Drug Co., corner First South and Main streets.

Hotel Arrivals. The Knutsford—Abner Newburger, Harry James, New York; J. McLeister, San Francisco; Henry G. Gaynor, Potomac; Florence Edekin, Evelyn Edekin, Harrisburg, Pa.; L. J. Edwards, Boise; J. W. Lowell, Denver.

The Kenyon—L. S. Nicholson, New York; R. A. Walsh, Wyoming; W. R. Kivett, Boston; J. S. Schwartz, Miami; H. M. Andrews, Chicago; P. H. Mitchell and wife, Ogden; J. E. Moody, J. P. Elliott, B. S. Sprague, Portland; W. C. Hanks, Chicago.

The Cullen—A. A. Bent, Des Moines; Geo. C. Patterson, Geo. Atkins, Delaware; E. W. Watson, Denver; Jno. A. Wharton, New York; R. P. Dayton, Murray; J. L. Wade, Montclair.

Wey—S. Mifflin and wife, New York; A. M. Maxson, Green Castle, Mo.; C. Robbins, St. Louis; A. G. Kinsburg, Boston.

White House—James C. Cagan, St. George; Chas. Appleby, C. Appleby Jr., Rochester, N. Y.; Dr. Charles E. Irvine, Portland; C. Mason, New York; F. L. Peterson, Peoria; David Bullock, Cedar City; Mrs. E. Santschi, Harry Santschi, Castle Gate; N. Robinson, Cotton; J. S. Schwartz, Miami; J. S. Livingston, Albert Livingston, G. J. Goulding, Halley, Idaho; J. P. Rogers, R. R. Woolley, Bingham; John Sloan, Miss Grace Keard, Charleston, Canada; W. B. Bingham and wife, Col.; D. Woolley, Grantville; Thos. Jones, C. S. Jones, Moss M. Plick, Rexburg, Idaho.

"I had long suffered from indigestion," writes G. L. Drouillard, of Lehigh, Mo. "Like other I tried many preparations but never found anything that did me good until I took Kodol Dyspepsia Cure. One bottle cured me. A friend who had suffered similarly I put on the use of Kodol Dyspepsia Cure. He is gaining fast and will soon be able to work. Before he used Kodol Dyspepsia Cure indigestion had made him a total wreck.—Gode-Pitts Drug Co., corner First South and Main streets.

CARLISLE INDIANS LOST. Columbia's Crack Eleven Rolls Up a Score of 40 to 12.

New York, Nov. 28.—With practically perfect football for the first sixty-five minutes of play, Columbia's eleven rolled up their largest score of the season against the Carlisle Indian team this afternoon. In that time they scored 40 points, shutting out the Indians completely. In the last five minutes, however, the Indians, making a sudden and unexpected brace, and Columbia being weary, going to pieces from the previous hard work, the speedy Carlisle team gained 12 points almost in the twinkling of an eye, making the final score 40 to 12 in favor of the blue and white.

Columbia's back field must be accorded the greatest credit for the victory. Carlisle suffered from lack of weight. Never once seriously did Carlisle get the merit of Columbia's play. About 5,000 people were at the Polo grounds.

Lumbermen Eaten by Wolves. Montreal, Nov. 28.—News has reached here from Gilmour and Houston's lumbermen that Edward Connor, 18 years old, a lumberman, had been eaten by wolves.

Roumania's Financial Problem. New York, Nov. 26.—A dispatch from Bucharest to the London Times and New York Times says that the Roumanian government described the financial question as the main problem of the political situation. Hope was expressed that the measures of economy recently adopted would restore the financial equilibrium. The foreign relations of Roumania were declared to be satisfactory. The speech referred to the progress of the harbor works at Constantza, stating that the harbor would provide an outlet for the export of cereals in the winter.

Prison Reform in Morocco. New York, Nov. 29.—A correspondent of the London Times and New York Times writing from Marrakesh (City of Morocco) says the sultan has issued edicts providing for prison reform. The reforms are to begin at Fez, Meknes and Tetuan, and are to extend to other towns.

Two officials are invested with powers to take prisoners wrongly confined. Food and clothing are to be distributed, and the prisoners are to be cleaned and made sanitary.

Sultan Muley Abd el Aziz informed the correspondent that he was determined to carry out his schemes of reform. In spite of the opposition to them, progress would be slow, however, added the sultan, until the officials realized the danger of being punished for their misdeeds.

SCIENTIFIC MISCELLANY. Nordenfjeld's discovery that fresh water can be had anywhere in Scandinavia at depths of 100 feet in Archangelsk rocks has been verified in 400 cases.

Powders not coarse enough to be retained by ordinary sieves are separated from finer ones, without the aid of motive power, by the new machine of two French inventors. The material is thrown by a rotating brush

against cylinders making 200 revolutions per minute, and the coarse particles are thrown on one side, while the dust-like particles adhere to the smooth surface and are scraped off on the other side. When the speed is reduced to 120 revolutions, the cylinders take along particles of a lesser degree of fineness.

Noble acid resists the greatest heat of the ordinary furnace, but in the electric furnace M. Molesan has reduced it to metal whose only impurity is a small proportion of combined carbon. Niobium proves to be a very heavy, remains solid at the melting point, platinum is, but slightly attacked by acids, and at a red heat has no action on water vapor. It burns easily in oxygen, however, forming a stable acid with properties resembling those of the more common acids. The metal seems to class it with silicon and boron rather than with the metals.

At the sugar refinery at Tarry, France, molasses is prepared for fuel for cattle by being heated to 90 degrees and poured into a mechanical mixer with such materials as wheat, chaff, cut straw, turf, sesame, peanuts, rice, bean, cottonseed, and other objects, concentrated mass coming from the mixer is left in a pile for some hours with certain precautions. The final result is a homogeneous dry product that is easily transported and keeps well. The output of the refinery, using waste molasses at slight expense, is 30 to 45 tons of this cattle food.

Proof of motion in any of the spiral or other nebulae would be a discovery of extraordinary interest. During many years, Dr. Isaac Roberts, the English astronomer, has been collecting accurate records of the positions of the stars and the pictures, it is reported, are now to be carefully measured. The plates cover such an interval of time that it is hoped that changes in progress can be detected.

About forty superfluous hairs, Dr. A. Whitfield finds, can be removed by electrolysis at one sitting. The negative electrode is a battery of about five Leclanche cells into the neck of the hair follicle, and the patient then grasps firmly the positive electrode. After a few seconds bubbles of hydrochloric acid are evolved from the follicle. The needle is shortly afterward withdrawn, and after a moment or two the hair may be pulled out very easily. The inner root sheath coming with it, which is the case of the operation has been successful.

So-called "bronze" medals have been recently struck in pure copper. This has been done by the process of electrolysis in contact with iron oxide, by the Japanese wet process, in which is used a boiling solution having copper sulphate and a variety of verdigris as the main constituents. The latter process gives a patina of a variety of beautiful shades of brown. Sir W. C. Roberts-Austen notes that European medals are now discarding pure copper, and returning to the use of alloys much like that of the ancient Romans. The Roman alloy, as shown by coins of Hadrian and Trajan, consisted of about 87 per cent of copper and 9 of zinc with some lead, tin, iron or silver, and traces of antimony.

A German method of platinizing porcelain is given importance by the need of platinum apparatus and the high cost of the metal. By fusing a coating of platinum salts on the porous surface of a thin deposit of platinum is formed, and the vessel so covered is claimed to be quite as durable as solid platinum and cheaper.

It is affirmed that no nation is increasing so rapidly in height and weight as the British. In fifty years the average height of Englishmen from 5 feet 7 1/2 inches to 5 feet 8 1/2 inches. The average height of the criminal class is but 5 feet 5 1/2 inches.

The new range finder of Prof. G. Forster, designed to meet the requirements of infantry in the field, it consists of a field glass to be carried in the usual way, and a folding aluminum base, which is six feet long when extended, when folded, which less than three pounds, and can be strapped upon the back. The base is a square tube, each half of which has at each end a doubly reflecting glass prism. The rays of light from a distant object strike the outer pair of these four prisms, are reflected at right angles along each tube, and at the two middle prisms into the two tubes of the binocular. The angle between these rays is determined by two wires, that in one telescope being fixed, while that in the other is moved by a micrometer screw until the two wires are seen as one at the same time that the object is seen distinctly, from the angle the distance is obtained, and may be easily estimated to within 60 yards for 3,000 yards and 15 yards for 1,500 yards.

A beautiful carnation worn by a gentleman at a dance party not long ago was noticed to be leaving red streaks on the wearer's shirt front and vest. Investigation showed the astonishing fact that the "flower" was made from slices of onion neatly cut and dyed with acid magenta, the stem and leaves being of twisted cloth dyed dark green, while the bloom was very fine starch powder, and the support was a concealed iron wire. The wonderfully natural perfume was given by "essence," a synthetic amber-colored oil. No poisonous substance was found in this clever product, although harmful dyes might be used.

This list of the movements of the earth now recognized by astronomers is given by M. Flammarion: (1) rotation, having a period of 24 hours; (2) revolution, period 365 1/4 days; (3) precession, period 25,765 years; (4) lunar gravitation, period 28 days; (5) nutation, period 18 1/2 years; (6) variation of obliquity of ecliptic, about 47 years; (7) variation of eccentricity of orbit; (8) change of line of apses, period about 21,000 years; (9) planetary perturbations; (10) change of center of gravity of whole solar system; (11) general translation of solar system in space; (12) latitude variation with several degrees of periodicity.

The meager results from silkworm culture in Germany are attributed to the severity of the climate, which, however, does not affect the worm directly so much as it does the food. Attempts are being made to find a substitute for the mulberry leaf, and at Sprockhov 32 kinds of plants have been tried, each being fed with greater or less success to 400 or 500 worms. In Crefeld black hellebore was fed to 120,000 worms. Silk fiber was obtained, but it was inferior to that from mulberry-fed worms and the problem of a satisfactory new food seems to be yet unsolved.

Mothers everywhere praise One Minute Cough Cure for the sufferings it has relieved and the lives of their little ones it has saved. Stricken at the heart of the trouble and draws out the inflammation. The children's favorite Cough Cure—Gode-Pitts Drug Co., corner First South and Main streets.

Dr. Lyon's PERFECT Tooth Powder Used by people of refinement for over a quarter of a century.

against cylinders making 200 revolutions per minute, and the coarse particles are thrown on one side, while the dust-like particles adhere to the smooth surface and are scraped off on the other side. When the speed is reduced to 120 revolutions, the cylinders take along particles of a lesser degree of fineness.

The base is a square tube, each half of which has at each end a doubly reflecting glass prism. The rays of light from a distant object strike the outer pair of these four prisms, are reflected at right angles along each tube, and at the two middle prisms into the two tubes of the binocular. The angle between these rays is determined by two wires, that in
