> cherries and peaches will soon follow and both will be very good. The apple crop will be great and it is safe to say crop will be great and it is safe to say that perhaps from four to five hundred car loads will go out of this valley the coming fall and winter. Sugar beets never were so good. The acreage is larger and the crop better than at any time since the sugar factory has been here. Unless some unforeseen calamity overtakes us, we will have a wonderful large crop of sugar beets. The large window frames on the stake tabernacle have been put into place and

tabernacle have been put into place and they loom up nicely. This work seems a marvel of unity to those not acquaint-ed with the "Mormon" methods of building

NEW WARD ORGANIZED.

Last Sunday President Bramwell and his two counselors, together with J. M. Grant Geddes, stake superintendent nday schools, made a visit to what of Sunday schools, made a visit to what is known as Pine Grove and organized a ward, making 13 now in all in the Union stake. Hyrum Weech was in-stalled as Bishop with W. J. Ransom and Percy Chandler as counselors, Sister Thos. Ransom was made presi-dent of the Relief society, with two counselors, and Brother Burnes as su-perintendent of Sunday schools. Where this ward is organized in a

perintendent of Sunday schools. Where this ward is organized is a new country as far as our people is concerned, but it promises to become a strong community. Already our people have bought a church, a hand-some one, too, and they will proceed at once to re-paint it and it will then pre-sent an excellent appearance. Surely Zion is growing, and especially is this the case as far as the Union stake is concerned. Just think of it. We are but three years of age and have 13 wards, and many more will soon be es-tablished. We have such a country that to see us is to move here, and as many are seeing, many are moving here.

Remedial measures against the cod-Hng moth are those from which little or no benefit is derived except that of saving the fruit from attacks of the insect, says Farmers' Builetin, No. 171 of the Department of Agriculture.

It is sometimes as well to know what not to use against an insect as it is to know what to use. The following remedies have been at various times suggested and have been found to be of little or no value: Moth balls hung in the trees and supposed to keep moths. away; smudging orchards with ill-

away; shudging orchards with in-smelling compounds; plugging the trees with sulphur; plugging the roots with calomel: banding trees with tarred paper to keep the larvae from crawling up the tree; trap lanterns; baiting the moths with mixture of vinegar and mo-lasses; spraying with ill-smelling com-pounds; spraying with water; and elec-tric lights as a repellant of the moth. These so-called remedies have been tried is often that a fruit-grower is simply wasting his time and money when he uses them. The efficiency of sprays against this

The efficiency of sprays against this insect was discovered in spraying for canker worms, which feed upon the leaves of the apple. Since that time the machinery and the solutions used in spraying have been greatly improv-ed, and now this method is well known to be the best and most efficient. Many farmers have a deeply rooted objection to spraying on general prin-ciples. They have never sprayed, and many of them are proud of the fact that they do not spray their orchards, even if they do lose the larger part of their fruit which otherwise might have been saved. The more progressive and een saved. The more progressive and usiness-like apple growers are the staunchest advocates of spraying, and their efforts are uniformly successful. Experience gained by several years of spraying always brings about greater efficiency and a reduction of expenses. A furit-grower who wishes to begin spraying can well afford to study the spraying operations in other orchards and familiarize himself with the general methods.

The arsenical sprays contain arsenic

The arsenical sprays contain arsenic as the poisonous ingredient. There are several of the spraying compounds upon the market and many others which the fruit grower can prepare himself. Paris green is probably the best known of these arsenicals. It is a de-finite chemical compound of arsenic, copper and acetic acid and should have a uniform commosition. It is a section a uniform composition. It is a rather coarse powder and has the fault of set-tling rapidly. In the East it costs 20 cents a pound, while in the West the

Paris green may be prepared for praying as follows:

The lime should be fresh and should be slacked in quantites as needed. Mix the Paris green with a little water un-til a paste is formed, and then add this to the required amount of water, to which the lime has been added. A good average strength to use is 1 pound to 150 gallons, but is must be weaker on trees with delicate foliage, such as peach. Many fruit-growers are using it on ap-ple trees as strong as 1 pound to 100 gallons. Any of the other arsenical sprays can be used.

sprays can be used. The spray should be applied to the leaves and foliage so that a thin coat-ing will remain after the water has evaporated. To do this the spray should be applied with great force so as to form a dense mist. At all times the solution in the tank should be kept theroughly agitated agregality if Paris thoroughly agitated, especially if Paris green is used. Probably the most rapid progress in spraying can be made in the following way: Drive the outfit the following way: Drive the outfit between two rows and spray half of each tree in each row. The routes followed in an orchard should be gov-erned by the position of the water sup-ply. If the wind is blowing it is best

FIGHTING THE CODLING MOTH, 1 right angles to it, and advantage many e taken of the wind by allowing it to

blow the mist into the trees. The most important consideration in spraying is the time of the application. spraying is the time of the application. The time of application for the coding moth should depend entirely upon the stage of the insect, as the greatest efficiency is obtained by spraying just when the larvae are entering the fruit or immediately before. The sprayings are directed against the first genera-tion of the coding moth. Two of these sprayings are advised, one a few days after the blossoms have failen and beafter the blossoms have fallen and be-fore the calyx closes, and the other two weeks to a month later, when the larvae are entering the fruit. In cases of bad infection, when the pre-ventive measures have been neglected, other sprayings may be added. The later sprayings are directed are inverted to be a set of the set of the

The later sprayings may be added. The later sprayings are directed against the larvae of the later gen-erations when they are entering the fruit. The second generation en-ters the fruit varies with the locality and the seasons, in the same locality, but it is easily found by watching the fruit is not solve the entering being but it is easily found by watching the fruit for the first new entrance holes; or spraying may be commenced about twenty-one days after the date when the largest number of larvae of the first generation are ready to spin their coccons. The larvae of the second gen-oration usually horth the action the largest ccoons. The larvae of the second gen-eration usually begin to enter the last week of July, and the majority enter in August, while a few enter in Sep-tember. The number of sprayings to be made against this second genera-tion depends upon the efficiency of the preventive measures and the early sprayings. Two sprayings are usually sufficient; but if infestation is bad, three should be made. Light showers have but little effect in washing away the spray, but a con-

Light showers have but little effect in washing away the spray, but a con-tinued rain or a heavy shower makes it necessary to repeat the spraying. The lead arsenate is less affected by rain than the other compounds. The young larvae are killed by the poison they cat before they have enter-ed the fruit. They get it in the calvy poison they eat before they have enter-ed the fruit. They get it in the calyx, on the sides of the fruit, or on the leaves. Recent work tends to show that a great many get the poison by nibbling the poisoned leaves.

BANDING.

The use of bands to trap the fullgrown larvae of this insect was the only remedial measure of value before the use of arsenic sprays was dis-covered. When an orchard has been given good care, preventive measures have been fully carried out, and spray-ing is thoroughly done, it is unneces-sary to use bands. If, however, the trees are old, have cracks and holes in the trunks and branches, and are close forether, so that the superbox

trees are old, have cracks and holes in the trunks and branches, and are close together, so that the spraying can not be well done, it is quite neces-sary to use these bands; or if it is desired to bring the insect under con-trol in a badly infested orchard, the bands can be used with good success as an additional preventive. Banding for this insect in general is simply offering a good place, in which the larvae will spin its cocoon and kill-ing it after it has done so. Cloth bands, from 10 to 12 inches in width, are folded once lengthwise and placed around the tree. They can be fastened in such a way as to be easily removed and replaced by driving a nail through the ends and then nipping off the head at an angle so as to leave a sharp point. If a tree is large, one band should be placed on the trunk and one on each of the larger limbs. Cloth bands of any heavy, dark-color-ed stuff are much preferable to bands of hay or paper. When bands are used, other places in which the larvae might spin cocoons should be destroy--ed or rendered unsuitable. It is, of course, a most important point that it harvae which go under the bands ourse, a most important point that he larvae which go under the bands the larvae which go under the bands be destroyed. To accomplish this the bands should be inspected regularly at intervals of ten days. At best, band-irg is but little effective in badly in-fested localities if used alone, but it is a most valuable adjunct to spray-ing.

What is Castoria.

ASTORIA is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhea and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The children's Panacea-The Mother's Friend.

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision since its infancy. Allow no one to deceive you in this, All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children-Experience against Experiment.

Letters from Prominent Physicians addressed to Chas. H. Fletcher.

Dr. F. Gerald Blattner, of Buffalo, N. T., says: "Your Castoria is good for children and I frequently prescribe it, always obtaining the desired results."

Dr. Gustave A. Elsengraeber, of St. Paul, Minn., says: "I have used your Castoria repeatedly in my practice with good results, and can recommend it as an excellent, mild and harmless remedy for children."

Dr. E. J. Dennis, of St. Louis. Mo., says: "I have used and prescribed your astoria in my sanitarium and outside practice for a number of years and find to be an excellent remedy for children."

Dr. S. A. Buchanan, of Philadelphia, Pa., says: "I have used your Castoria in the case of my own baby and find it pleasant to take, and have obtained excellent results from its use."

Dr. J. E. Simpson, of Chicago, Ill., says: "I have used your Castoria in cases of collc in children and have found it the best medicine of its kind on the market."

Dr. R. E. Eskildson, of Omaha, Neb., says: "I find your Castoria to be a tandard family remedy. It is the best thing for infants and children I have yer known and I recommend it."

Dr. L. R. Robinson, of Kansas City, Mo., says: "Your Castoria certainly as merit. Is not its age, its continued use by mothers through all these years, of the many attempts to imitate it, sufficient recommendation? What can a hysician add? Leave it to the mothers."

Dr. Albert J. Weston, of Cleveland, O., says: "I have used your Castoris my practice for the past eighteen years with the utmost success."

Dr. Edwin F. Pardee, of New York City, says: "For several years I have commended your Castoria and shall siways continue to do so, as it has variably produced beneficial results."

Dr. N. B. Sizer, of Brooklyn, N. Y., says: "I object to what are called tent medicines, where maker alone knows what ingredients are put in them, it I know the formula of your Castoria and advise its use."

(Seal) JOHN JAMES, Clerk. By David B. Davies, Deputy Clerk Ray Van Cott, Attorney for Estate
