MINING, BUSINESS AND STOCKS

CORONA WILL RUN LONG TUNNEL

Adit Will be Started From East Side of Property, Marking Beginning of Active Campaign.

AMERICAN FLAC COMMENT.

Every One in Camp, Says E. W. Griffith, Seems to Have a Good Opinion Of Mine Below Anchor Tunnel.

Yesterday was spent in Park City ly E. W. Griffith, who went to camp to spend a day in making investigations. He visited the Corona property. which is being worked by local and eastern parties. Manager Spooner has a force of men engaged in clearing off a place on the east side of the property where a tunnel is to be started and which is to mark the beginning of a very vigorous campaign of develop-

Over at the Homestake, Thomas Cupit and other Park Cityltes, are pushing development work again. The Homestake is located near the Gier ege and bears first class indications

Mr. Griffith, while in teamp, heard considerable comment on the American Flag mine. Everywhere this property is looked upon with favor and many believe it will, in a little time, become one of Park City's heavy producers. Miners, around their boarding houses and on the streets, are frequently heard to express themselves favorably towards the Flag, and Mr Griffith is one who believes when min-ers get anxious for a little hold in a mine, there must be some merit to it. There is much satisfaction preva-

lent in the camp over the starting of the Ontario mine and mill after the shut-down, occasioned by the fire which destroyed the costly holsting plant.

The other big mines are working along steadily with about the usual

CON. MERCUR HIGHER.

May Day Not So Strong Today-Quotations and Sales.

Among the features of today's trading on the floor of the Salt Lake Stock and Mining Exchange was a noted picking up in Con. Mercur and while no sales were recorded, the quotations made show a better tone to the market for that stock. May Day, which displayed such unusual ascivity last week was not so strong today and ended with some declines marked up against it. Sacramento gained a quarter of a cent over the opening sale, while New York Bonanza with the 3cent assessment is ked onto it found a buyer at 2 cents. On the open board some Columbus Consolidated quotations were made, but really very little stock transferred. Daly-West came out at \$14 and Daly-Judge at \$4.40. A sale of Tonopab, common, sold at \$.10. The closing quotations and sales posted were as follows:

BORAX DEPOSITS IN U. S.

Was First Produced in This Country as Far Back as 1864.

The borax fields of the United States are mainly in the desert "dry lake" region of southern California, though deposits are found also in Nevada and Oregon. Borax was first produced in the United States in 1864, at Borax Lake, California. The borax was contained in the water of the lake and was chained by expression.

was obtained by evaporation.

The saline crusts of the so-called dry lakes or borax marshes of the Mohave Valley were next mined for borax, and afterward, about in 1888. work was begun on the beds of cole-manite, or borate of lime, in San Ber-nardino Co., Cal., from which most of the borax mined in the United States has singe been obtained.

The amount of crude borax pro-

duced in the United States in 1903 was 34,430 short tons, valued at \$661,400. The production in 1902 was 17,404 short tons of refined borax, valued at 2,447,614, and 2,600 short tons of crud porax, valued at Sul,000, a total o Dorax, valued at \$2,538,814.
Of the refined bornx \$62 short tons, valued at \$2,538,814.
Of the refined bornx \$62 short tons, valued at \$150,000, were borle acid. Had the valuation in 1903 been taken on the refined instead of the crude on the refined instead of the crude.

on the remod listers would have been \$2,725,000 instead of \$661,400.

The amount of borax, borates and boric acid imported into the United States in 1902 was 1,694,251 pounds, valued at \$63,236. In 1903 the amount imported to \$2,000 and \$2,00 Imported W. 3 909,251 pounds, values it \$47,018.

Refineries for borax are located at Bayonne, N. J., Brooklyn, N. Y., New Brighton, Pa., Chleugo, III., and San Francisco, Cal., where various more or ess secret processes are employed to is designed for various use

Borax is used for many purposes. When molted at a high temperature t dissolves metallic oxides and form transparent colored glasses. It is used old and silver. It is employed in and of enameled bath tubs and other articles, as well as in making pottery Manufacturers o the hard, tough grades of glass and of thes are large users of borns. It is used by painters, tanners, hat makers, and callco makers, as well as

The domestic uses of borax are widely known, and in chemistry and metallurgy the borates are employed in many ways.

A clear account of the borax indus-try in the United States is given in a pampblet eatitled "The Production of Sorax in 1903," by Charles G. Yale, forming a chapter in "Mineral forming a chapter in "Minera Resources of the United States, 1903, from which the above facts have been taken. This pamphlet, which contains detailed statistics covering the reduction and importation of borax 1 1902 and previous years, is printed gratuitous distribution and may be had by application to the director of the United States geological sur-

THE MAMMOTH MILL.

Tintic Plant Will Probably be in Operation Tomorrow.

At the offices of the Mammoth Mining company today it was learned that the mill would probably be started before tomorrow dawns. Supt. Samuel McIntyre, Jr., has been energetic in getting things in order during the past

President Samuel McIntyre expects to leave for camp again this evening.

CENTURY CONCENTRATES. Pannings Valued at \$2 a Pound in Morket Today.

The Century Gold Mining company has a shipment of rich "pannings" in the market today, which, Manager Madsen says, is worth at the rate about \$2 a pound. The pounds in the shipment. There are 1,400

CAPTAIN EADE HERE.

Mining Engineer of the Leiter Syndicate Visits Utah Again.

Capt. J. A. Eade, well known to the sity for a few hours last Saturday and n the afternoon took his departure for hicago, intending to stop off en route,

to visit the big fair at St. Louis.

Capt. Eade was for years in the service of the Leiters of Chicago in the capacity of a mining engineer and through him was consummated many deals which being to well the Leiters. deals which helped to swell the Leiter millions. At one time the captain rec-ommended the purchase of the Old Jor-dan and Galena mines of Bingham, which later formed the basis for the organization of the United States Min-

organization of the United States aming company, but for some reason the matter was not taken up.

A few years ago the Leiters were extensively interested in the asphaltum and elaterite deposits in eastern Utah, and still hold property there. Capt. ing into the proposition of the manu facture of mineral wax and paints. I so happened that the quality of the de posits examined into were not as good as some others and the experiments

were without substantial results.
Since the death of the senior Leiter,
the estate has been placed in the hands
of trustees and for the time being mining operations in which the heirs are interested are at a standstill.

Joe Leiter, the noted plunger, has

taken up a coal mining proposition in southern Illinois and Indications are favorable for his making a big lot of money out of it. The coal produced is said to be of a good quality for coking, and there is always a big market for it in that region.

PARK CITY MINES.

Corona Company After More Ground-Demolition of Marsac Mill.

J. C. Phillips came up this morning and is now at the West Quincy repair-ing one of the large pumps there. Mr. Phillips is in the employ of the Salt Lake Hardware company and is frequently sent out by them on such trips.

A deal is on whereby the Corona company will obtain considerable ground at base of the mountain so hat they can tunnel in and tap the ormation. No definite information formation. No definite information has yet been given out regarding the immediate plans of the company. At the American Flag, development

intendent John Rhoden has put a cage on the cable instead of the bucket heretofore used. The erection of a mill is one of the probabilities of this campaign of work.

The old Marsac looks more and more

of n wreck every day, Good progress has been made in its demolition this week, giant powder having been used

The pumping of water continues at the West Quincy. President Turner has not yet arrived in camp, but his re-turn will mean the resumption of deelopment work at this property.

The new slime plant erected last pring at the Daly West by F. W. Sherman the expert miliman has proved very successful, and the management is of the opinion that still another such plant could be made to pay. Accord-ingly the erection of a second plant will

loubtless be begun soon.

Manager Byron Hartwell of the Eastmaterio went to the metropolis Thurs-lay to complete some business relating to the patenting of the company's ground. Very little work has been done at this promising property this year owing to the fact that matters have been rather unsettled. No further may been failer insettled. No further work will be done until spring, when everything will be in readlness for a campaign of active work. The ground will have been patented by that time and other arrangements for the property's development completed. The work already are the property of the property o work already done has exposed a quan-dty of mineral bearing rock and those n a position to know, state that they see no reason why, with development

COUNTRY ADDRESS AND A TO THE TRANSPORT OF

SHOWING OF THE AMERICAN.

Net Earnings for Fiscal Year, According to Annual Report, Increased \$328,000.

SURPLUS OF SIX MILLIONS.

And Over - Appropriation Made for New Construction Purposes-I Ividends On Common Stock.

That the American Smelting and Refining company is not having any difficulty in keeping its finances in good order is quite evident by investigation of the annual report of President Nash to the stockholders of that corporation. During the fiscal year ending April 30, the net earnings of the company show an increase of \$85

The executive committee appropri-\$1,097,581 from the earnings for the following purposes: \$597,581 covering expenditures for new construction and for extraordinary improvements; and \$500,000 carried to the credit of the metal stock account.

The executive committee thought it wise in yiew of the large increase in surplus account, to further decrease the value of metals in processes of atment, thus giving an additional save to absorb possible fluctuations in market quotations. During the year dividends at the rate of 14 per cent quarterly were started on the common

Speaking of the year's results President Nash says; "A further investment in the stock of the United States Zinc company, has been made during the past year. The production of zinc ores in the state of Colorado has increased very largely during the last few years.
These ores to a considerable extent
have been shipped to Germany to be
smelted. The works of the zinc company at Pueblo, Colorado, which have been erected for the purpose of smeltthe such ores at a point convenient to that of their production, have only been completed during the past year, but are already being operated at a

Operators of Coeur d'Alenes Greatly Handicapped by Water Scarcity.

After an absence covering a period of several weeks in the Coeur d'Alene mining regions, Engineer D. P. Rohl-fing has returned to the city to give

Ms. Robling confirmed what appeared in the "News" several days ago relative to the scarcity of water in that camp and the consequent effect it is having upon the mills of the dis-trict. Some plants are shut down en-tirely and the Morning company, which ordinarily, furnishes employment for a force of 600 men has trimmed the payroll down to sixty. The shortage is accounted for by the unusually slight precipitation during the year.

The water famine has interfered with the operations at the Gold Hunter mine, of which Mr. Rohlfing is con-sulting engineer. But there has been suiting engineer. But there has been no let up in the prosecution of development work. In measuring up the ore bodies exposed, it was found that there are no less than 200,000 tons available at the present time, for milling purposes. The mine is equipped with a mill of 250 tons daily capacity.

It has been decided to develop the property by means of another tumpel.

property by means of another tunnel and to this end preparations are being made to start it 600 feet below the present one and to reach the desired point it will be necessary to drive it into the mountain 4,300 feet.

Work at the Cluster.

At the Cluster mine of Bingham, Manager Peter Porter reports work going ahead steadily and that some good bodies of ore are being developed.
