MINING, BUSINESS AND STOCKS.

CONTRACT FOR BIG POWER PLANT LET

The Columbus Consolidated Mining Company Will Spend $40,000 In Little Cottonwood.

AWARD MADE TO JAS. J. BURKE.

Works to be Completed Not Later Than Jan. 1, 1904 — Something About the Equipment.

The contract for the construction of the proposed power plant for the Columbus Consolidated Mining company has been let and it stipulates that work is to commence at once and that it is to be completed not later than Jan. 1, 1904. The award was made late yesterday afternoon to Contractor James J. Burke. The plant when completed will represent an investment of about $40,000.

In his agreement with the company Mr. Burke is required to erect a strictly modern plant and in addition to the equipment to be installed in the building, he is also to furnish 4½ miles of poles. The 300 kilowat generator is to be driven by water power.

The works are to be located in Little Cottonwood canyon, about 12 miles below the company's mines at Alta. It is proposed to generate sufficient electrical power to drive the machinery of a mill to be erected later, also for the machine drills in the mine. The company, in addition to this, expects to derive considerable revenue by furnishing lighting facilities for the citizens of the camp. The power plant has been in contemplation for some time.

GOOD MARKET WEEK.

On the Mining Exchange Tintic Stock Were in Good Demand.

The week closed with the sale of 227,140 shares on the Mining Exchange, the same being the equivalent of $133,932.13. The trading was confined mostly to Tintic stocks and several of them have made sensational advances, the most important of which was furnished by Tetro and Little Chief. On Tuesday forenoon the latter closed with a bid of a cent a share, while today the closing bid was marked up at 185/8 cents. Tetro is at least 10 cents higher and bears strong indications of going up more. The activity in these stocks has been due to fresh ore discoveries, which bear evidence of permanency. Yankee Consolidated is another Tintic trader that has climbed the ladder several rounds, the stock selling today at 59 cents. Star Consolidated also ends in better shape and was among the active traders during today's calls.

One Bingham stock ends up with marked improvement in price and has participated very freely in the transfers since Monday; this was Silver Shield. At the beginning of the week it was offered at 11 cents and notwithstanding that the directors levied an assessment, the price has held steady.

The closing quotations and sales reported today were as follows:

TETRO LOOKS GOOD.

Assistant Manager E. G. Woolley, Jr., Returns from an Inspection Trip.

Edwin G. Woolley, Jr., assistant manager of the Tetro mine in Tintic, returned this forenoon from making an inspection of that property. While Mr. Woolley is somewhat modest in making statements for publication, he was willing to admit that the outlook at the mine is very bright indeed, at the present moment. The extent of the ore bodies have not as yet been determined. Orders have been promulgated to drive the drifts both ways, east and west, on the vein, and also to continue work in the upraise.

While he has no intention of booming the stock at all, Mr. Woolley expresses the opinion that the prevailing price of it is not any too high considering the recent developments; on the contrary, he believes it presents good opportunities for investement.

Two carloads of first-class ore is being loaded today, and these will be followed early next week with three cars of second class. Settlements are being made today for a lot which assayed 43 per cent lead and 44.7 ounces silver.

Speaking of the Little Chief strike, Mr. Woolley says the opinion prevails in camp that it is a good one and that it bears indications of being a permanent vein.

LITTLE CHIEF STRIKE.

Much Interested on Broker's Row Concerning New Tintic Find.

The strike made in the Little Chief mine in Tintic a few days ago is creating considerable interest on Brokers Row to say the least. During the late call of the mining exchange yesterday afternoon the stock was in strong demand and at prices no one dreamed of a week ago. The first movement on the stock of any consequence was on Thursday when the report reached the ears of a few that ore had been encountered which ran as high as 500 ounces silver and 40 per cent lead. This was thought to be too good, so the story goes, to be true; so another sample was procured and tested by another assayer with exactly the same result. This being the nature of a confirmation of the first report it at once stimulated buying and sales were made at prices up to 18½ cents a share. The strike was made on the 800 level and the pay streak is reported to be over four feet wide.

WEEKS METAL SETTLEMENTS

McCornick & Co. Report Them to the Extent of $371,000, Independent Plants.

The ore and bullion settlements for the fiscal week ending Sept. 11, as reported through McCornick & Co., amounted to $371,000 as follows:

	Ores.	Base Bullion.	Gold Bars.
Saturday	$ 35,400	$ 28,200	$ ....
Monday	Holiday	.....	.....
Tuesday	22,700	53,900	7,400
Wednesday	47,600	32,300	.....
Thursday	41,300	28,200	.....
Friday	33,100	39,700	2,000
Totals	$189,100	$182,400	$9,400

With the output of the Bingham Consolidated estimated, the shipments of copper bullion from the independent smelters during the present week, amounted to 601,975 pounds as follows: Utah Consolidated, five cars, 240,000 pounds; Bingham Con., three cars, 180,000; United States, three cars, 181,975.

CONCENTRATES.

Henry M. Crowther, manager of the Continental-Alta mines went out to the company's property today.

A telephone received from thhe Daly-Judge mine this forenoon conveyed the information that a snowstorm was prevailing there.

President John Dern of the Con. Mercer will depart for Nebraska this evening, on a brief business trip to Nebraska.

The case of the United States Mining company vs Leonidas M. Lawson et al, is scheduled to come up in the circuit court at Denver next Thursday. The case involves rights to the ore of the Keystone mining claim. To be present at the trial of the case Col. E. A. Wall and George Sutherland, his attorney, departed for the scene of action today.

Supt. J. E. Beveridge of the Century mine of Park Valley, is down from camp. He brought with him a bar of bullion of the usual size, the value being about $3,000.

All work at the Little Bell mine at Park City is being concentrated in the shaft, which is now 570 feet deep.

L. G. Brown, secretary of the Erie Copper company, operating in Beaver county, has returned from a trip to Oregon.

President W. B. Mucklow of the Majestic mines has advised Manager Alexander that the sampling mill at the new smelter has been started up.

The directors of the May Day Mining company are scheduled to meet this afternoon and will in all probability levy an assessment of 2 cents a share. The company is in debt to the amount of $5,000, including the August payroll. The assessment will bring in about $8,000.

The rumor in circulation yesterday that a strike had been made in the Comstock mine has been confirmed. A four-foot vein of carbonates and galena was encountered in the shaft at a depth of a little less than 350 feet. The shaft is being sunk to the 600-foot level and 14 men, working three shifts, are employed. The shaft is being put down in triple compartments.

Col. Matt A. Daugherty has returned from California, where he went to examine some mining property in behalf of some eastern parties.

POWER PLANT IN MEADOW VALLEY

Was Built by Bamberger-De Lamar Mines at a Cost of Approximately $400,000.

IT IS SPLENDIDLY EQUIPPED.

Source from Which the Camp of De Lamar, Nevada, Gets Its Water Supply and Electric Power.

Down the Meadow Valley Wash, 12 miles below the new town of Callentes, in southern Nevada, is located the plant which supplies the town of De Lamar and the mines and mills located there with electric power and water. The plant is new and is said to be one of the most modern equipped of any in the west. It was built by the Bamberger-De Lamar Gold Mines company, at a cost of approximately $400,000.

As a bird would fly, the mines at De Lamar are at least 13 miles away, and upon this plant down the Wash the citizens of the town depend for a great deal for the water they use and light, which is furnished as cheap, if not more cheaply, than ordinary oil lamps would cost.

There was a time in De Lamar when water was scarce and none could be had for the mill built at the De Lamar mine, by its former owner, Captain J. R. De Lamar. However, he operated it with the dry process and made money. But disastrous results followed to the men who worked there and many of them have passed to the other side from the effects of inhaling the fine dust. A person once afflicted with what was known as "De Lamar consumption," the malady proved almost invariably fatal. Strong men were broken down in health in a few months' time, never to regain their former vigor.

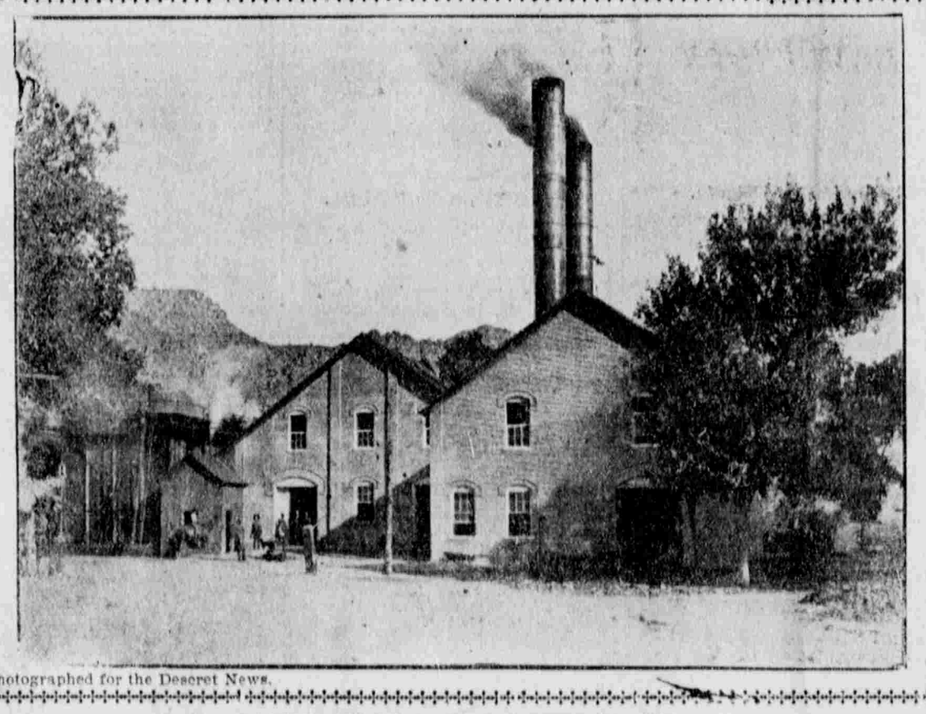
Captain De La Mar, it may be said to his credit, did everything in his power to eradicate the danger to the lives of his employes after discovering the source of the difficulty. He spent thousands of dollars in the effort to find a process for the treatment of the ores of the mines which would control the deadly dusts. He was quite successful; but not until the long pipe line was built from Meadow Valley Wash, was the danger entirely overcome. The water is conveyed through this pipe at the rate of 70 gallons per minute or 4,200 gallons every hour, more than 100,000 gallons per day. It is elevated 2,000 feet, the camp of De Lamar being that much higher than the pump station. Formerly three pumping stations were in use, the main plant and two sub stations along the line; the latter are now replaced by electric motors receiving the current from the transmission line, thus reducing the cost of operation at least one fourth.

The electrical equipment of the main plant consists of two 400 Kilowatt three phase alternating current General Electric generators. The voltage is raised from 2,300 to 17,000, and transmitted over aluminum wires to De Lamar, 13 miles. There the current is again transformed and reduced from a voltage of 17,000 to 460, which is used to supply the motors driving the mill machinery, centrifugal pumps, elevators, etc. Power is also furnished to direct current generators which supplies power for a five-ton motor employed in pulling the long trains of loaded ore cars out of the mine to the mill. Then, as has been stated, the camp is given electric lighting facilities. At the pump house two 800 horse power compound engines are in use, furnishing power for the generators and pumps. The water is taken from shallow wells and the supply is inexhaustible.

One of the most important stations on the line of the San Pedro, Los Angeles & Salt Lake railroad will be established at the pump house. The new road will pass within a few rods of the building and the grade is already completed.

This point will be the supply station for the mines at De Lamar and recently the Bamberger-De Lamar Gold Mines company constructed a new wagon road which reduces the distance to about 18 miles.

What the name of the new station will be has not been determined, but the suggestion has been made that it be called Bamberger, in honor of State Senator Simon Bamberger, of this city, the manager of the De Lamar mines, and who has contributed much towards the building up of other mining enterprises in southern Nevada.



Photographed for the Deseret News.

BAMBERGER-DE LAMAR POWER PLANT.

The articles of incorpration of the Alta-Germania Mining company of Salt Lake City were yesterday filed with the county clerk. It has a capital stock of $200,000, divided into 400,000 shares, 225,000 shares of which are treasury stock, at a par value of 50 cents each. The company will operate in the Little Cottonwood Mining district, Salt Lake county. Joseph Sauer is president; Louis Hobein, vice president; A. J. Weber, secretary and treasurer.

ACTIVITY IN THE SUGAR FIELDS.

Utah and Idaho Managers Conferring in Salt Lake City.

LEHI MILL STARTS MONDAY.

Beets Will be Harvested at Garland And in Idaho Within the Next Few Days.

Yesterday saw quite a marshalling of the sugar clans at the office of the Utah and Idaho sugar companies in this city. General Manager T. R. Cutler had summoned his local managers in from the various plants to report progress and to take steps for the immediate harvesting of the beets. George Austin, agricultural superintendent of the Utah Sugar company at both Lehi and Garland, Mosiah Evans, manager at Idaho Falls, were all in town and busily engaged in making their reports and arranging for the necessary distribution of labor to harvest the beets. Digging in all the fields tributary to Lehi is now actively going on, and the mill will start up on Monday, its substations at Bingham Junction, Provo, and Springville, firing up immediately after. At Garland the crop is almost ready to harvest, and the delivery of beets by the farmers will commence within the next few days. Beets will be stored at the factory which is not quite completed, the Dyers of Cleveland having a force working extra hours. The expectation is that the wheels will commence to grind in the next 20 or 30 days.

Mark Austin, the manager of the Idaho company, said to a "News" representative that they would have 50,000 tons of beets at least, and it might run as high as 60,000 tons. The yield in fact was simply prodigious. He brought down for Manager Cutler's inspection the tests made from a long list of beet samples taken from the various fields in the Idaho district. All were reported as very satisfactory, and Mr. Austin said they would begin to harvest within the next few days, storing the beets at the factory as rapidly as delivered. The Dyers are rushing operations here also with a big force of men working overtime, and increasing the number of laborers as fast as they can be obtained. Mr. Austin's present hope is that the factory will start up about 30 days hence.

Speaking of the new Fremon County sugar factory which is to be located at Sugar city, 30 miles north of the Idaho company's plants, Mr. Austin said that the outlook was excellent for a good crop next year, and that the contracts for the mill would be let at once so that it could be ready for operation fully a month earlier next year than the other plants now starting up. In addition to the Fremont mill a pumping station will be erected in time for next year's operations on the Egin bench. It will be located 6 miles northwest of the Sugar city site. Land for this had already been purchased and the board of directors had authorized its construction and its connection with the main plant by a pipe line.

Speaking of the Sugar city townsite in which he is also interested, Mr. Austin said there was no doubt in his mind that this would be one of the principal towns in that locality. It is to be laid out just across the county road from the sugar factory and its land is as valuable as any found in that locality. In fact it is such valuable beet land that until the lots are sold it could all be rented to the sugar factory. Applications had already been received from prominent business men who wished to build at the new townsite, and among those who had been promised locations were a bank, a drug store, a meat and produce business, a lumber business, and a mercantile business block. The contracts with all builders would require that only the most substantial kind of structures be erected. The Oregon Short Line had promised to build a fine station there, and as soon as the sugar factory operations are under way, he thought there would be a general demand for homes from the people who will be drawn to the district by its operations.

The Messrs. Austin and Mr. Evans all agree that the crying need of the hour is for skilled laborers. Good men are greatly needed, but it has been found almost impossible to obtain them.

Week's Business.

New York, Sept. 12.—Events of the week in the stock market were few and unimportant in their bearing on the situation as a whole. There were suggestions, however of a further recession in commercial and industrial values. Absence of anything like a buying demand, save for high grade securities, and these only in small quantities, continues to be a depressing factor. Trade is restricted to the professional element. The railroad situation continues satisfactory with good returns. The weak point of the speculative structure is the decline of industrial stocks, notably the steel issues. In conservative banking quarters, however, conditions are reported to be inherently sound, proof of which is given in the abundance of money offered for commercial uses.

WAS RENEWAL OF ADVANCES.

This in Special Stocks, But at Other Points Profit-Taking Sales Were in Evidence.

GENERAL DROOPING TENDENCY

Succeeded Opening Hesitancy and the Bank Statement Diffused a Heavy Tone.

New York, Sept. 12.—There was some renewal of yesterday's advance in special stocks but at other points profit taking sales were in evidence. Members of different groups moved in contrary directions, particularly of the western division which showed improvements for St. Paul, Union Pacific and Southern Pacific, while Atchison and Missouri Pacific were a little lower. United States Steel was bought in round lots and advanced a small fraction. London prices for Americans were generally higher, but the international stocks opened higher, with slight changes either way.

The opening hesitancy was soon replaced by a general drooping tendency and most of the usual leaders fell a fraction below last night. There was some pressure against the Atchisons, Brooklyn Transit and Manhattan and their losses of a point or over diffused a heavy tone throughout the market. There was a slight rally in the market prior to the publication of the bank statement but when that exhibit appeared, showing a much larger cash loss than had been expected, and also an expanse of loans, selling was resumed. Anaconda dropped 4 points. The closing was weak

MONEY AND BONDS.

New York, Sept. 12.—Close: Prime mercantile paper, 6@6½ per cent.

Sterling exchange steady, with actual business in bankers' bills at 4.85@4.86 for demand and at 4.82½@4.82½ for 60 days. Posted rates, 4.83½ and 4.87; commercial bills, 4.81½@4.82.

Bar silver—56⅞.

Mexican dollars—45 cents.

Government bonds, Steady; railroad bonds, Irregular.

Close: Money on call nominal.

SUGAR.

Sugar—Raw, firm; fair refining, 3⅝; centrifugal, 96 test, 3⅞; molasses sugar, 3⅛; refined, firm; crushed, 5.60; powdered, 5.10; granulated, 5.00.

CHICAGO LIVE STOCK.

Chicago, Sept. 12.—Cattle.—Receipts, 3,000; steady; good to prime steers, 5.50@6.15; poor to medium, 4.00@5.25; stockers and feeders, 2.50@4.15; cows, 5.10@5.50; heifers, 2.00@5.00; canners, 1.50@2.75; bulls, 2.00@2.75; calves, 3.00@6.80; Texas fed steers, 3.25@4.65, western steers, 3.25@6.50.
