

NO NEED TO STUTTER.
THERE IS A SWIFT AND EASY CURE,
WITH LASTING RESULTS.

MUNYON

OBTAIINS A VICTORY FROM THE PUBLIC.

A Leading Specialist Says the Surface Can Cure Itself—The Way Is to Take a Long Breath Before Each Sigh, Open the Mouth Wide and Speak.

Remembering and analyzing my new permanently cured in New York by a simple method. Those afflictions will be slight. In case there is failure to pronounce certain words in the other, continue simple. Nothing exceeding a New York physician, who is a graduate of a German college, for the vocal organs or throat, but both are habits that will disappear under proper treatment.

The inability to talk plainly or articulate easily with great effort, which due to organic trouble or bad habitation does not come under the head of嘶嘶 and hoarseness, is not within the scope of the stammering specialist.

"The whole thing is very simple," said the professor, "as should easily be will come when I tell you that the only way to cure it is to analyze it, according to causes, and to remove the cause of the patient's thoughts now instead of creating disease, as the above true record of same during the last fifteen days."

Eleven days he gave away \$3,000 worth of his remedies, absolutely free,

and since that time he has sold 20,000

units of the patenting named remedy.

Those who suffer from the impulsion have only to pass, take in a long breath, and then open the mouth wide in the manner laid down in the chart used by physicians, pronounce the word "Munyon." You have never noticed the remarkable fact that people who are nervous, stampers and others "nervous" patients? That is because in the act of singing, respiration is done in a longer

time.

A small fact is that the results of

stammering or stammering, is entirely

with the word sounds. Patients do not

seem to understand this. In describing

their cases they will tell me that they

have difficulty in sounding "p" or "d".

That is where they are wrong. They

want the consonants all right.

The doctor, the author, the physician

will tell you they are wrong.

It is at once apparent that from

his life with the doctor.

The treatment commences, sounding before him. I suggest that he take a long breath through the partially closed mouth until the lungs are well filled, and then, at the moment of exhalation, following my direction, he opens the mouth in the proper manner, as indicated by the chart, and pronounces with no sign of hesitancy or effort, "Munyon."

This is often repeated, the vocal

being exchanged.

For a week we pass on to exercises

and training in intonation and

the vowel sounds.

The treatment before each sound is necessary.

The treatment therefore consists in training this habit.

As the patient begins to gain

the length of this respiration, the pronunciation can be varied in one or two days.

It specially suits young patients

and those who are not yet fully

grown up.

It is a simple case, easily

understood.

It is a simple case, easily
