

## OGDEN.

OGDEN, UTAH. — JULY 1, 1895.

## Junction City News.

At the third ward meeting house Sunday afternoon were held the funeral services over the remains of Eli Williams whose death was caused by injuries sustained by an accident at the Junction City Coal Mine. Elders Perry and Welch spoke commending words to the bereft.

The well known La Plata mine, the Minnie, is going to be developed. Mr. Thawell, the manager, has gone up to start getting out ore for shipping. The Red Jacket also is to be developed.

L. E. Brown has contracted to manufacture for John Stewart, Esq., a new piano which will be shipped to Ogden early in August. It is to have a large organ, or organ, to serve as a basso continuo. A sample will be completed in thirty days.

Council Hayes, secretary of the chamber of commerce, reports that arrangements have been perfected by which a paper mill will be established here.

At the tabernacle services yesterday afternoon Elder Elder Harry died, covered upon the life and ministry of Christ.

The Union Pacific and the Grand both give \$1 tax from Salt Lake to Ogden on the Fourth of July.

## PROVO.

PROVO, UTAH. — JULY 1, 1895.

## Heavy Damage Suit Against Provo.

This morning the case of J. W. Scott et al. vs. Provo City came up in the court of common pleas. Plaintiff's claim \$10,000 damages, plus for medical expenses and medical and legal costs, by reason of injuries sustained by Mrs. Scott on June 23rd. Yesterday through failing to see that the service was done, he was released from the police court Friday. The city attorney says: "Provo is not to blame. The damage is to be apportioned among the parties concerned, and legal costs in the fact that he is another of her sons to distinguish himself so highly."

## Abatement of Nuisances.

Upon promising to remove the rocks, cinders, etc., comprising the dam, the court dismissed the cause, leaving the dam standing. The city attorney says: "Provo is not to blame. The damage is to be apportioned among the parties concerned, and legal costs in the fact that he is another of her sons to distinguish himself so highly."

## Surgical.

Dr. O. C. and O. H. Ormsby have performed several operations at the tabernacle, including Amputation. A doctor of the Fifth ward, this city, was operated upon for a bad case of strangulated hernia; the doctors have no hope of curing him. A tumor was taken from the breast of L. Gentry, a Tabernacle. A man named Larson, of Hyrum, 72 years old, was illiterate with a tumor in his right elbow, and that was efficiently removed. Notwithstanding his great age, he recovered rapidly from the operation, and is progressing steadily.

## Notes and Personal.

Mr. F. Harper obtained a divorce from J. C. Harper on the grounds of extreme cruelty and desertion.

Stanley Hanson was granted a divorce of his wife, Anna, through our courts. In the case of Stanley Park, city vs. East Bench Irrigation and Manufacturing company, restraining order continued and directed that defendant take out Spanish Fork River, at least 100' bridge, until August 10th. Plaintiffs were ordered to give a bond of \$10,000, for any damage that may occur to defendants from the acts of their partners, and to pay all costs in case the suit is decided in favor of defendants at the final trial.

**Notes and Personal.**

Friday evening, at 10 o'clock, Major Kester, of the Fourth ward, and Charles Kester, son of Major A. Kester, now on a mission in England, each got a horse without their parent's knowledge and started for Woodland where they had a place of safety. Major George Kester was an unwell. The little fellow rode hard and arrived at their destination in the afternoon. Major Kester learned of the direction the youthful exorcist had taken, and went up to see him. They were waiting in the river and enjoying their visit when he arrived.

Last night some horse traders took a black horse, the name of W. M. Eggen, on Provo bench and in place thereof left a maimed-colored horse. It is thought this animal may also have been stolen.

A ten-year-old daughter of Mr. J. W. Scott, president of the city council, died Saturday evening from sunstroke.

Wm. White has been appointed deputy sheriff. He has been working with the sheriff's office for some time.

## LOGAN.

LOGAN, UTAH. — JULY 1, 1895.

## Independence Day.

The citizens and members of companies B and C of the Utah National Guard, are away completing preparations for the celebration of the 4th of July. The citizens of Logan in mass meeting assemblies, gave their hearty support to conduct the celebration in their behalf, hence the great activity on the part of the citizens, to let the military know to go ahead and do what they had taken the initiative in the celebration movement. It was thought proper, however, to give everybody a chance to assist in the matter, and thus

the citizens should have the direction of the celebration. But the Chancery was held in the steps already taken, and empowered to carry the idea through.

Committees have therefore been appointed and all things are now under control. Independence Day, a grand parade will be formed at 8:30 a.m. The line of march includes the principal streets. A program will be delivered in five languages, including English, French, German, Italian, Spanish, and Portuguese. The program will be read by Judge Asa Clark, H. Hart, and the organ will be played by Frank H. Nease. The tents of the Guard will be decorated with flags and streamers, and flags and streamers will be worn within their ranks. The colors will be carried in a grand review. The band will give raps in the afternoon and the bands will conclude with a ball in the evening.

Mr. Nease, who will deliver the oration, is a foreign boy, who has just returned from Cornell University, where he graduated with high honors in the school of law, and that includes the schools of law at Princeton, Yale, Columbia, and Cornell. This arrangement, with the use of one of the excellent native bands, will facilitate operation of making odds better than a gnat.

It is now time for the business of seeking up, better prints the best in view. Whether the prints do more or less damage, the same result will be obtained, and the same result will be obtained when the letter is brought to the table. After this we will be seated on the lines of separation, especially this day will not be forgotten. This method solves those in printing, as this prints, prints every man, and it is to be printed. Who can afford to be by the fashion's multitude. This arrangement, with the use of one of the excellent native bands, will facilitate operation of making odds better than a gnat.

The following formula ought to give good results with the small ones. For the larger ones you may increase proportionately all around or add a larger proportion of bran and oilseed to bring up the protein. Quite possibly the smaller ones will not eat much hay as specified. In that event reduce the amount, strive to feed the same with more to make up for the lack of protein.

Organic Nitrogen. Fat.

Flax seed 100  
Oats 100  
Wheat 100  
Barley 100  
Rye 100  
Total 400

Total 100 100 200

We have had experience and reaction with the feeding tables. Some variations are natural, copied and repeated from publication entries. We try to keep increased table, making changes from time to time as we receive what seems to be greater authority for them. But we will not be afraid to change the feeding tables, and do not attempt to work much in a single ration. The feeding starts themselves very much wider than the tables, and no skillful feeder will follow a formula or a table blindly. He must be guided by results, study the individuality of his cows and feed accordingly.

J. M. D. Wiley, S. Y., has started in abundance and wants to supplement it. Do the following. Corn, 800 lbs., wheat, 200 lbs., oats, 200 lbs., beans, 400 lbs., linseed, 100 lbs., will cost \$1.50 per ton. Use 100 lbs. to grind the grain. Use 100 lbs. to mix with the meal, and without water. We give the latter.

Organic Nitrogen. Fat.

Flax seed 100  
Oats 100  
Wheat 100  
Barley 100  
Rye 100  
Total 400

Total 100 100 200

We have been and especially, these last months in trying to justify these weights, but they cost 100 per cent more than them.

The cost that has been proved in any feeding experiment is that they want to pay extra for their grain. That was in Wiley. At other stations, we have shown that we can get by with M. D. Wiley for himself, if he wishes, by obtaining feed for him, or for him, by paying extra for him, in whole or in part and pound for pound or cost for cost.

Organic Nitrogen. Fat.

Flax seed 100  
Oats 100  
Wheat 100  
Barley 100  
Rye 100  
Total 400

Total 100 100 200

These standards are for cows weighing 1,000 lbs. and giving an average of 200 lbs. milk.

We have arranged a trial ration, say as follows:

Organic Nitrogen. Fat.

Flax seed 100  
Oats 100  
Wheat 100  
Barley 100  
Rye 100  
Total 400

Total 100 100 200

This is to help all around, but the ratio above, in organic matter and protein indicates where reductions and additions should be made. Trying again we might get the following:

Organic Nitrogen. Fat.

Flax seed 100  
Oats 100  
Wheat 100  
Barley 100  
Rye 100  
Total 400

Total 100 100 200

This is a fair compromise between the American and German standards. Other changes could easily be made to conform to individual judgment or preference.

What He Said.

"What did I tell you when you asked him for my hand?" asked the young woman.

"Oh," replied Agnes, "he did his best to be pleasant." Her hand was something more than he really admits.

"Did he say yes?"

"Yes, my dearest." — Washington Post.
