A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE

CHICAGO, ROCK ISLAND & PACIFIC R'Y

By reason of its central position, close relation to principal lines East of Chicago and continuous lines at terminal points West, Northwest and Southwest—is the only true mid-continental system which invites and facilitates travel and traffic in either direction between the Atlantic and Pacific.

The Rock Island main line and branches include Chicago, Joliet, Ottawa, La Salle, Peoria, Geneseo, Moline and Rock Island, in Illinois; Davenport, Muscatine, Washington, Fairfield, Ottumwa, Oskaloosa, West Liberty, Iowa City, Des Moines, Indianola, Winterset, Atlantic, Knoxville, Audubon, Harlan, Guthrie Centre and Council Bluffs, in Iowa; Gallatin, Trenton, St. Joseph, Cameron and Kansas City, in Missouri; Leavenworth and Atchison, in Kansas; Albert Lea, Minneapolis and St. Paul, in Minnesota; Watertown in Dakota, and hundreds of intermediate cities, towns and villages.

THE GREAT ROCK ISLAND ROUTE

Guarantees Speed, Comfort and Safety to those who travel over it. Its roadbed is thoroughly ballasted. Its track is of heavy steel. Its bridges are solid structures of stone and iron. Its service is perfect as human skill can make it. It has all the safety appliances that mechanical genius has invented and experience proved valuable. Its practical operation is conservative and methodical—its discipline strict and exacting. The luxury of its passenger accommodations is unsurpassed in the world.

ALL EXPRESS TRAINS between Chicago and the Missouri River consist of comfortable DAY COACHES, magnificent PULLMAN PALACE PARLOR and SLEEPING CARS, elegant DINING CARS providing excellent meals, and between Chicago, St. Joseph, Atchison and Kansas City—restful RECLINING CHAIR CARS.

THE FAMOUS ALBERT LEA ROUTE

Is the direct, favorite line between Chicago and Minneapolis and St. Paul. Over this route solid Fast Express Trains run daily to the summer resorts, picturesque localities and hunting and fishing grounds of Iowa and Minnesota. The rich wheat fields and grazing lands of interior Dakota are reached via Watertown.

A short desirable route, via Seneca and Kankakee, offers superior inducements to travelers between Cincinnati, Indianapolis, Lafayette and Council Bluffs, St. Joseph, Atchison, Leavenworth, Kansas City, Minneapolis, St. Paul and intermediate points.

All classes of patrons, especially families, ladies and children, receive from officials and employes of Rock Island trains protection, respectful courtesy and kindly attention.

For Tickets, Maps, Folders—obtainable at all principal Ticket Offices in the United States and Canada—or any desired information, address,

EVENING NEWS.

Saturday, March 26, 1887.

HEALTH HINTS, ETC.

The following quotations are taken from Dr. M. L. Holbrook's book, "Eating for Strength:

BAD DIETETIC HABITS.

"We suppose there is no doubt but at least half the ill-health of the world comes from improper eating.

An excess of carbonaceous food promotes the formation of fat, and prevents the complete nourishment of the muscles.

It gives a person bulk, but not strength. Vital power is deficient in very fat people.

An excess of nitrogeneous food gives rise to diseases of a plethoric character—apoplexy, fevers, etc.

Too little food, we all know, impoverishes the blood, and gives rise to feebleness and starvation. Nothing will so soon derange the brain and the nervous system as a low diet."

There is a much greater probability of not eating the proper kinds of food than there is of not eating a sufficient quantity.

AIDS TO DIGESTION.

"1. Proper selection of food.
2. Best treatment of food as regards cooking, flavoring and serving.
3. Proper variety of food, with occasional change of diet.
4. Moderate exercise; warmth and a genial state of mind.
5. Abundance of sleep.
6. Pleasant social surroundings at the table.
7. Thorough mastication.
8. Regularity in eating, and proper intervals between meals."

SEASONABLE FOOD.

"Our food should vary with the season of the year. As winter gradually gives way to spring, our health, comfort and happiness are greatly augmented by diminishing the quantity of our heat and force producing foods, and substituting in their place, to a considerable extent, green vegetables and early mild acid fruits. Even before early vegetables and fruits can be had, canned fruits and vegetables should take the place of the rich food required in winter. Many people think they must be 'physicked out' in the spring, but this is a vile practice wholly unnecessary. Good brown bread, milk, cream, fruits, and oatmeal as the staple articles of spring diet, with no salted meats, and little or no meat of any kind, will keep the bowels in perfectly healthy condition at this season of the year; whereas if ham and eggs, hot bread, superfine hot biscuits, stale potatoes, are the principal articles of diet, there is no end to the suffering that may be entailed; then as summer comes on, early fruits and vegetables should be still more largely partaken of. Strawberries should be used in abundance—raspberries, blackberries and cherries, each in their season. Apples, tomatoes, peaches, grapes, melons, etc., make up a list of fruits rich in fluids, opening, cooling, appetizing, delicious, health-giving; these with good brown bread, and Graham gems with milk creams, oatmeal and fresh butter should, to a great extent, take the place of fats and highly carbonized foods and meats. In very hot weather the fats should be almost discontinued. One will suffer less from the heat if this is done. Much sickness will be prevented by proper attention to the subject of wisely adapting our food to the season of the year and climate."

AMOUNT OF FOOD REQUISITE.

"The amount of food needed daily a healthy person, varies greatly with the assimilative power. Some persons get more out of a pound of food than others, because they more perfectly digest it.

Great vigor, or physical exertion increases the required amount, and inactivity diminishes it.

Cold increases the amount of food needful, while heat decreases it, but increases the amount of water needful.

The *natural* appetite is the only guide. This should be aided by common sense and reason."

APPLES.

"Many persons do not value apples sufficiently as an important article of diet. Besides containing a large amount of sugar, mucilage, and other nutritive matter, this fruit contains vegetable acids, aromatic qualities, etc., which act powerfully in the character of refrigerans, tonics and antiseptics, and when freely used at the season of mellow ripeness prevent debility, indigestion, and avert, without doubt, many of the ills which flesh is heir to.' The operators of Cornwall, England, consider ripe apples nearly as nourishing as bread and far more so than potatoes. In 1810, which was a year of much scarcity, apples, instead of being converted into cider, were sold to the poor; and the laborers asserted that they could 'stand their work' on baked apples without meat; whereas a potato diet required either meat or some other substantial nutriment. The French and Germans used apples extensively, as do the inhabitants of all European nations. The laborers depend upon them as an article of food, and frequently make a dinner of sliced apples and bread. There is no fruit cooked in as many different ways in our country, nor is there any fruit whose value, as an article of nutriment, is so great.

Two good apples eaten before breakfast are an almost sure cure for constipation."

Stewed dried apples are an excellent substitute for the fresh fruit. I have seen ignorant persons exchange this wholesome food at stores for unwholesome swine meat.

OATMEAL.

"According to Dr. Edward Smith, who carefully investigated this subject, the fine bodies of the country people in Scotland are in great part the result of their diet of oatmeal and milk. The Scotch women and children do less factory work, and live more out of doors.

When the writer was in Edinburg the celebrated Dr. Guthrie called his attention to the fact that the average size of their heads was greater than that of any other nation in the world, not excepting even the English; and when asked how he accounted for this, he replied that he thought it was owing largely to their universal devotion to oatmeal.

Indeed, the writer observed that the national dish was found upon the table at almost every meal. In the morning came the porridge and milk, and in the evening the traditional cake, a little harder than sun-dried brick.

For further confirmation on this important question, let the writer add that he has found a great advantage to follow the daily use of (honest) brown bread and oatmeal in his family. A child whose first teeth came through in a starved condition, so that they began to decay at once and cause much suffering, is now blessed with as fine a set of second cutters as any one could ask, while the general health of all has improved. In fact, we all vote that we must daily have our brown bread and twin-sister dish of oatmeal."

A HYGIENIC BREAKFAST.

There is a greater variety of food mentioned in the following than may be found requisite for one meal; judgment must be exercised in this as in regard to eating, enough but not too much should be the rule.

"Graham bread and gems, baked potatoes, baked apples, cream, butter, boiled eggs. If you have cold mush, whether made of cornmeal, oatmeal or Graham flour, you may cut it in slices, place upon slightly buttered pans and warm in the oven. Bake the potatoes in a hot oven, and take them out the moment they are done, or they will be heavy, waxy and sodden. Removed at just the right time, they will be white and mealy and such are better cold than over-baked ones, though steaming hot.

Then for a simple drink mix equal parts of cornmeal and Graham flour, or cornmeal and oatmeal, stir a cupful of this in two quarts of boiling water, boil for twenty minutes, then add a quart of milk, pour into a pitcher and send to the table. A cupful is an indefinite quantity; we purposely leave it so, for some will prefer for that quantity of gruel a very small cupful, and some will prefer it thicker. (It may be slightly sweetened.) Pudding or cracked wheat, cooked the day before, may be placed on the breakfast table cold or slightly warmed, to be eaten with sugar and hot milk or stewed berries.

To be added to the bill of fare, if the family is large, or substituted for some of the articles if the family be small, consider the following: Baked squash, Graham bread toast, with boiling milk thickened with corn starch poured over it, or add to boiling milk, broken stale bread; boil for one minute and send to the table hot. Graham mush, oatmeal mush or cracked wheat, sent to the table in saucers, hot, to be eaten with sugar and cream or stewed fruit; corn bread or corn-meal gems; cabbage, cut fine, boiled in a small quantity of water, (steamed would be better,) add cream dressing or lemon juice; boil together freshly pared turnips and potatoes (the turnips must boil awhile before the potatoes are added), as soon as done pour off the water, dry for a moment, mash finely, add a little milk or cream, then stir well with a fork, dish and send to the table hot."

STOMACHS.

"Only a good sized stomach is capable of digesting abundance of food to keep up a large supply of blood. Small stomachs and small livers are incompatible with high health and great powers. When children are kept on very concentrated food and too much sugar, the stomach is apt to be too small. On the other hand, if kept only on coarse vegetables it may be too large. Never reduce the size of the stomach by wearing corsets, they injure this organ and the liver more than they injure the lungs."

(Extracts from this book will be continued next week.)

25 Tracts on Health topics, for 10cts. A book about what and how to cook and eat, for health, 10cts. Mailed by D. M. McAlister, 66 Centre St., Salt Lake City

Special Notices.

Chemists say that the purest preparation for lung troubles is Red Star Cough Cure.

THE MODERN PLOW.

REVERSIBLE SHARE.

DEAR FRIEND:—Our object in addressing you is to arouse your interest in our new plow, as we know if you but see it, that its advantages will be clear to you.

No amount of description of this series can adequately convey all the points of excellence and superiority over all other plows now on the market. They are not made for any particular section of the country, or class of work, but will give perfect satisfaction in any locality, as all parts are interchangeable—either chilled metal or high grade steel. This makes

A PERFECT COMBINATION PLOW

and the desire of the farmer who wishes to have a Plow that can be adapted to different soils or classes of plowing with a few changes, and slight additional expense, is thus gratified. Our claim regarding the amount of work that can be done with the small outlay for repairs, is based on the peculiar share used, which is virtually *Two Shares in One*, apparently laid together as it has two points, the wing being hollow, having a post or pin around which a hook bolt passes to draw it onto the standard. A nut on the end of the hook bolt, behind the standard, draws the share tightly up to the standard and moldboard, making it fit as firmly as if it was a part of the standard. The share has two faces; the one not up doing duty, is down below out of the way. There is no bolt head in the surface of the share, nor nut under it; neither is there any projection under the body of the Plow, to catch on obstructions, or accumulate dirt. We show herewith, sketches of the appearance of the Reversible Share as it would appear cut through the middle, to illustrate the way it wears, Both faces, as will be seen, are tapered alike to a sharp edge, as shown in cut No. A. The share is like this when new. The passing of the share through the ground wears off the underside of the cutting edge, so that after plowing awhile the edge is beveled below, something like shown in cut B. This tends to make the plow run out of the ground, and in ordinary plows it would end the life of the share. Now the nut is loosened, the share lifted away from the plow, *turned upside down*, put back and the nut screwed tight. The cutting edge of the share is now, as shown in cut No. C, with bevel downward, and the share virtually resharpened. The reversing process can be carried on till the metal in the share is worn back to where it is too thick to cut, and always have a sharp edge. The hollow wing and the two points will 3 certainly plow as long as two ordinary shares, without taking into consideration the peculiar fact that while one point is in front plowing, the other is the *heel of the share*, being worn to a sharp edge, so that when the front *nose* has rounded off, the share can be reversed and the blunt end put on the heel of the wing, and the point that was on the heel, brought to the front, sharp. When the share has been reversed a number of times, and in consequence of the metal being worn away, partly loses its suction and will not hold the ground as well as at first, then another improvement for getting still more service out of the share, comes in play. The landside has an adjustable shoe on its under and inner side, as shown on the opposite page, which is moved down or up at the heel, to adapt the Plow to the suction required, be it on account of a partly-worn share, or because the ground is hard and stony.

We make deep suck shares, with short noses, very strong for unusually hard soil, and can plow in a satisfactory manner, the most difficult ground. The construction of the share admits of making it stronger than the old style, and there is no limit to the strength that can be put in it. The plows are set up with a general-purpose share, that combines lightness with strength. The adjustable landside-shoe takes most of the wear, and can be replaced at a slight cost, saving the expense of an entire new landside. A very novel feature of this Plow is the

NEW PATENTED SHIN JOINTER,

which as shown in the cut, rises from the shin, standing out at right angles to the course of the Plow and shearing off its slice from the angle of the moving furrow, throwing the top of it, with sod or trash and manure that may be on the ground, to the bottom of the previous furrow.

The jointer being so close to the plow, it cuts ground that has already been lifted and partly broken, so that its work is much easier than to break the hard surface in advance of the plow, as is all old styles. It is always in line; the changing of the beam for two or three horses not affecting it. It is adjustable, vertically, to adapt it to the amount of work required. It is impossible to choke it, and stones cannot get caught between it and the plow. It dispenses with a rolling coulter in mammoth clover, and, in fact, it can be used to advantage in all kinds of plowing.

The difficulty of the Plow moldboard not scouring back of the jointer, as sometimes experienced with other styles, is entirely obviated. The jointer on the No. 185, attaches to the knee cutter, bringing it exactly to the place where it meets the rising furrow slice at the right angle, and at the right time, to effect a beautiful job. It is a triumph of inventive ingenuity, and no other plow maker can imitate it, on account of our having the exclusive right to make jointers on this principle. In no case where the jointer has been tried has it given any but the most *unqualified satisfaction.*

The jointer as before stated, fastens on a shin, on the Nos. 103, 104, 110 and 115, which is especially made to receive it, and on No. 185 the jointer fastens to the knee cutter. We furnish regular plain shins for Nos. 103, 104, 110 and 115, to use without jointer, also cutter shins, which run out sharp and perpendicular in front, taking the place of a cutter share. The 185 is furnished with plain knee cutters, both steel and cast.

The principle of the jointer is the correct one, and it only needs to be seen at work to commend itself at once.

The beam and handles can be used on either right or left hand Plows; they being interchangeable. The handles are arranged to adjust in height, so that a small boy can have the handles fitted to his stature, as well as the tallest man. The changing is very simple, and can be done in two minutes time, without disturbing a bolt in the surface of the Plow. The bolts have keyheads and cannot turn in the iron, saving the vexatious labor experienced in removing ordinary round-head bolts.

The Plows are set up with the regular general purpose chilled or steel moldboards, which are interchangeable with

SOD MOULDBOARDS,

which are particularly adapted to plowing sod.

These Plows can be had all full chilled or entirely of steel, or

ANY COMBINATION DESIRED,

so that farmers that wish to provide for a great variety and scope of work, will do well to get a Plow, the parts of which can be changed to adapt it more perfectly to the condition of the soil.

The Studebaker Branch is general agent for the whole west, for the sale of this Plow. Call in their warerooms and examine this *wonderful* Plow; or on their agents in any town in Utah or Idaho—or ask your store-keeper to send for a sample Plow or write us for one.
