MRS. WOODHULL HAS NEW SCHEME

Famous American Agitator Now Desires to Regenerate Poor Old England.

THAT SPINSTER PROBLEM.

Albanus Eden in Which Intellectual Studies and Recreation Are Combined—Under Royal Patronage.

Special Correspondence.

LONDON, Jan. 22.—Victoria Woodhull has a new scheme on hand. It is nothing less than the solution of the spinster problem in England by providing a profitable outlet for their talents and energies in light agricultural pursuits.

Mrs. Woodhull started regenerating mankind before she was out of her teens. The fact that humanity has thus far stubbornly refused to be regenerated by any of her methods does not dampen her ardor or enthusiasm.

BACK TO THE LAND. Mrs. Woodhull says that she and her daughter have long been convinced that the true future of the race lay in the land, but they have not been content to "back to the land" experiments because they left out of account the deadly monotony and isolation of modern village life.

AIM OF THE CLUB. The aim of the club is to combine scientific agricultural training with practical farming of the kind which women can do. Eventually the estate will be divided into small holdings for husbandry, poultry raising, bee-keeping, market gardening and dairy farming.

ROOM FOR STUDENTS. At present the Manor House will accommodate about 50 students, but as the scheme grows in popularity cottages will be erected on the estate, which will accommodate a larger number.

THE CLUB IDEA. The club idea is designed to meet the objection which so many grown-up people have to the discipline of school or college.

ONLY A BEGINNING. The Bredon's Norton club is only a beginning. (Continued on page twelve.)

England and other countries as well today. There is no occupation more suitable for women, she maintains, than light agriculture, but at present the woman of culture who goes in for it is cut off from association with people of her own rank in life and standing of education.

Sea-Water Cure the Latest Parisian Sensation

Marquise De MacMahon Finds an Institution in Paris That Needy May Receive the Benefit of French Scientist's Remarkable Discovery, Duchess Of Sutherland to Establish a Similar Institution in Scotland.

Special Correspondence.

PARIS, Jan. 22.—For the latest, and an exceptionally interesting, addition to its free dispensaries, Paris is indebted to a leading member of the aristocracy, the Marquise de MacMahon.

THE REAL WORKERS. The resident members will be the real workers on the land and there will be a constant stream of fresh life being into the community as the temporary pupils come and go.

MUST BE SELF-SUPPORTING. The scheme to be successful, of course, must be run on commercial lines and must be absolutely self-supporting.

WIDELY KNOWN. The Marquise de MacMahon is one of the best known figures among the French aristocracy.

ONLY A BEGINNING. The Bredon's Norton club is only a beginning. (Continued on page twelve.)

PARIS, Jan. 22.—For the latest, and an exceptionally interesting, addition to its free dispensaries, Paris is indebted to a leading member of the aristocracy, the Marquise de MacMahon.

RECOGNITION FROM BUTCHERS. The militant marquise was the recipient of a signal honor not long ago. In recognition of her benevolence the butchers of the ancient town of Limoges made her an honorary member of their guild.

MARVELOUS CURES. All Paris, indeed, is talking of the marvelous cures effected by the discovery of the learned biologist, M. Rene Quinton.

forms—worms, molluscs, crustaceans, insects, reptiles, birds and mammals.

VERITABLE AQUARIUM.

AFTER SEVEN years of patient and arduous research in his laboratory, M. Quinton came forth with the startling statement that man is a veritable sea aquarium; that his blood is really an oceanic liquid in which red globules bathe.

SEA-WATER CURE.

Reduced to its simplest expression, the sea-water cure which M. Quinton has reduced from his analytical research consists in introducing by subcutaneous injections into the enfeebled organism a serum of plasma which is nothing but perfectly pure sea water, sterilized and diluted in a fixed proportion.

SUBSTITUTE FOR BLOOD.

M. Quinton proved this theory by an experiment which now has become historic. He took a dog and bled it to the last drop of blood in its veins.

CANNOT BE OVERESTIMATED.

The importance of this discovery cannot be overestimated, for it brought to light one of the primordial elements of life. M. Quinton thus has shown us what is the liquid indispensable to the life of our organism.

SOURCE OF MALARIES.

Every malarial fever is a poisoning of the blood due to the waste product. The organism suffers from this modification of its natural medium.

QUINTON TREATMENT.

In his Sorbonne lecture M. Quinton dealt solely with the cases where the result was, as to speak, instantaneous.

YOUNG DUKE COMES OF AGE

His Grace of Leinster Considered Greatest "Catch" in Marriage Market.

MAY SEEK AN AMERICAN WIFE

Belongs to a Family Pre-Eminent in British History During the Past One Thousand Years.

Special Correspondence.

LONDON, Jan. 21.—American girls or at least those among them who are ambitious to wear the strawberry-bedecked and beaded golden coronet of a British duchess must hurry up.

The Duke of St. Albans, descendant of the illegitimate son of King Charles II, and the actress Nell Gwynne, is one of these. And now there comes the Duke of Leinster, known as "The Little Duke," because of his long minority.

Should any American girl become his wife she would take precedence of every American woman of title at the court of St. James, not because of being a duchess, but because of her husband's mastery of the horse.

POSITION OF PRECEDENCE.

There are in England at present three American reigning duchesses and several dowagers. But these brought a goodly sum of dollars to reward the drooping strawberry leaves.

DUKE FITZGERALD ONE.

His Honor Judge FitzGerald, who presided over the first "Thin trial," is a genuine and one of the distinguished American members of their powerful Irish clan.

FAMILY SHORT LIVED.

Like all his ancestors, the duke is of delicate physique. The FitzGerald, at least, the heads of the family, nearly all died young.

ESTATE WELL HANDLED.

The duke has been most carefully brought up. Although an orphan, his family in its thousand years of honors won has made more than a score of the noblest families in the British peerage.

DUKE WIELDS AN AX.

There are 11,000 acres of an estate surrounding the mansion. The main entrance is right in the town of Maynooth and the drive to the house is three miles long through beautiful wooded hills and dales.
