GARDEN CITY IS **GETTING GOOD ORE**

Buckleys Find Shipping Grade in Mountains East of

Provo.

ASSAYS ARE HIGH IN LEAD

Tintic Standard Files Suit Against Schnellman and Others.

(Special to the "News.")

Provo, April 15.-The Buckleys and others interested with them in the Garden City Mining company are very much encouraged over the condition of the mine in Rock canyon near this city. The property consists of six claims and a great amount of work has been tone. The main tunnel is now in 350 feet, and a winze is being sunk from an upper tunnel to connect with the lower tunnel, a distance of about 120 feet. The winze is now down 40 feet and is in good shipping ore. The ore and is in good shipping ore. The ore is principally lead carbonates and

Some very fine specimens are now on exhibition at E. A. Barney & Co.'s and another \$5.50 in gold, right ounces

work will be proceeded as vigorous-ly as possible on the property, and there is no doubt that it will be dem-enstrated that there is one in paying paratities in the mountains east of Provo, and the credit for doing this will be due the Buckleys, who have been st persistent in working this prop-

Tintle Standard Mining company against George Schnellman and the East Tintle Development company for a portion of the Lattic Silver is laim in Tintic district. It is alleged that Schnellman executed a conhas falled to carry out the agreement.

STRIKES ORE IN ADVOCATE.

Gold Mountain Property Encounters Ore in Face of 500 Foot Tunnel.

Joseph H. Nelson came down from Joseph H. Nelson came down from Gold Mountain yesterday, bringing with him samples of what is likely to prove the greatest strike made on Gold Mountain for years. The era is of the wich blue sulphide kind that makes every Gold Mountain miner cry out "eineka" as roon as the pick turns it into view. This strike is thrice welcome and made more important because ome and made more important because oming at a time when Gold Mountain has to an extent fallen into disrepute through the manipulations of disreput-

The Advocate struck this ere in the see of its 500-foot cross-cut tunnel seph H. Nelson had been awarded a contract for doing the 1909 assessment work in this tunnel. Last Tuesday the yein was reached and immediately the eft the mine last Wednesday, the vein sad been penetrated four feet and ore he stated since the opposite wall of the vein has not yet been reached, but sufficient has been uncovered to warrant the statement that it is one of the biggest things yet encountered on the internal beit of Gold Mountain. Sometimes of the ore will be forwarded to be the oreas to be th biggest things yet encountered on the biggest things yet encountered on the mineral belt of Gold Mountain. Sometime of the ore will be forwarded today to the unasayer.

ISSUES FACTS ON

Secretary of Arizona Property Explains Details of Work Being Done by Company.

RAISING THREE MILLIONS.

Company Has Now Over 400 Acres of Property Lying Along Great Mineral Bearing Belt.

Inspiration Copper, one of the big Gunn-Thompson interests, is being fast shaped up for a hig producer. General Manager George E. Gunn leves shortly to look over the work that is being done at this property, which adjoins the Miaini Copper compuny, eight miles west of Globe, Arlzona, The stock began selling on the New York curb Monday, and today was showing considerable activity according to reorts from the cast.

ports from the cast.

Work is being pushed on the various shafts and tunnels on the property and two core drills are prospecting the ground in much the same manner as is being done on the Ray Consolidated property. Secretary H. F. J. Knobloch has issued a circular setting out in detail the condition of the company and its prospects of future large production. The letter says:

The company is capitalized at \$10.000,000-100.000 preferred and \$00.000 common shares, par value \$19, all issued full paid and non-assessable. The preferred shares are convertible at any time at option of holder into like number of common shares and entitled, until conversion, to 6 per cent cumulative dividends, but have no preference over

ividends, but have no preference over ommon shares in case of liquidation. The 75,000 shares of preferred and 477,212 shares of common stock are now under option for \$3.272,120, to be paid into the treasury of the Inspiration Copper company as the shares are pur-

NO BONDED INDEBTEDNESS.

"The company has no bonded indebt-ciness, excepting that some of its pro-perties were purchased subject to a mortgage securing \$150,000 of bonds executed by a former owner. "The report of Henry Crumb, the company's consulting engineer, made in December last, is then quoted as fol-

similar to that of the Utah Copper com-pany at Bingham, Utah, the Nevada Consolidated and the Cumberland-Ely. had been penetrated four teet and the combet and the way. The tunnel cut the vein at right angles, and a drift was run at Ely, Nev., and the Ray Consolidated at Ely, Nev., an

CONCENTRATING ORE.

Final Survey Nearly Completed for Road from Ray to Kelvin.

Kelvin, April 15 - The installation of Kelvin and the balance of the values occur in small fissurer or searns and the balance of the values occur discerninated through the rock in comparative course specks of chalconite.
The ore will therefore not have to be crushed as fine as in the case of sema of the other disseminated copper deposits. Without making tests, I should

work with thinks in fine stape. All foremen have retained their full forces during the shut-down for repairs, using their men in cleaning up, making large and small improvements here and there that there would be no back of labor when the big wheels started around.

The final survey is completed for the company's broad gauge track from the amount of the street railway just south of the fleps. This will afford a large amount of work to many hoborers and men of the capacities, as the new survey only follows the present road-ben to flay for a short distance which means already for a short distance that the organization making tests, is about a that the organization as the strict about 20 min 1 is completed for the dissandated copper unineral soutes, as total area of roughly 200 acres, covering 7.500 feet along that the strike about 20 min 2. The company owns 22 claims, having a total area of roughly 200 acres, covering 7.500 feet along that the strike along t of ore. Five thousand feet west of the Mlant, the Inspiration, in its Woodson tunnel, has struck a suiphide asse and developed ore averaging 219 per cent copper. In passing over the surface from the Mani to the Woodson runnel and 3 90 feet beyond, the mineral heli and 2,000 feet beyond, the indicas belt is seen to be continuous, and the surface indications on the inspiration are the range, and fully as favorable as

the cause, and fully as favorable as they are on the Miami.
"In conclusion I may therefore sax that with these favorable surface indications, together with the fact that sulpide ares of pay grasis have already been developed in the Woodson tunnel, and the large body of ore developed by the Miami in its floof Rock shaft, all these facts make the Inspiration an unusually promising property.

"About 160 additional acres of valgable ground adjoining the above have been acquired by the company since Mr. Crumb made his report."

LOW COST OF PRODUCTION.

Can Produce Silver Bullion at Seven And a Half Cents an Ounco-Other Facts and Figures.

Much has been said in the east of the marvelous richness of Canada's treasure house and the vast stores of metal that are to be found in the Province of Ontario, Canada, in the lobalt district, but the west has paid but little attention to these marvelous tales. Yet it is believed the time is but a short distance off when this great area will show greater things in the silver world than any other. To the the silver world than any other. To the west of that great mining field fles Gowganda, Montreal river, and other districts where remarkable surface discoverios have been made, which promise to gladden the miner's heart with goodly quantities of the white metal. Six menths ago Gowganda was unheard of and little was known or the Montreal River district, yet today there are many hundreds of prospectors in the field and the district is fast being developed into a place of magnitude in the silver world. This has been done during the severe cold of winter. Now the ice is breaking in that district and the ice is breaking in that district and there is a wild scramble to place ma-

Intense suffering was also seen in the district during the early part of winter on account of its removal from a base of supplies.

A recent visitor in this great district back he delegate to supplie the supplier. A recent visitor in this great district had the following to say today:

"Cobait itself is hardly more than four years old, and yet its record of production within this brief period is doubtless the most remarkable in the history of silver mining. Its silver deposits are so rich and so exceptionally profitable, because of the low cost of producing, that even during the past year, covering a period when almost the lowest prices silver has ever brought have prevailed, the district has been able to net big returns,

GIANT PRODUCTION.

"Here is a district less than five years old, which has produced during that period 35,000,000 ounces of silver of a value approximating \$20,000,000, and with a dividend record of over \$10,000,000. Take these figures under consideration, and one can realize, partially at least, how important a factor the Cobalt district is becoming in the werld's production of the white metal. The silver production of the United States is only about \$40,000,000, and the total production of the world is approximately \$112,000,000, therefore, the Cobalt campahows a production of over 9 percent of the world's output, and it is only as yet in its infance.

cent of the world's output, and it is only as yet in its infancy.

"The first discovery at Cobalt was the famous Lu Rose mine, which last year produced 8,957.30 tone of ore, and which is now paying dividends at the rate of 16 per cent per annum with more than \$2,000,000 in values developed and ready to take out. Then there are the Nipissing mines, which for the year 1908 produced 7,231.09 tone, and which are paying dividends at the rate of 20 per cent per annum. at the rate of 20 per cent per annum, with more than \$1,000,000 in values actually uncovered.

LOW PRODUCTION COST.

tions of the strongest features of the *One of the strongest features of the entire Canadian silver situation is the low cost at which the metal can be produced and thus show a big profit. This is due to the fact that the values run so high, the deposits are so rich, and the camp is favored with excellent, transportation facilities, and furthermore, the deposits are easily worked. Several of the dividend paying mines in Coalt are producing silver buillon in Cobalt are producing silver builion at 7½ cents per ounce, including all costs, and the average cost to all shipcosts, and the average cost to all sup-pers is under 15 cents per ounce. When it is stated that silver cannot be pro-duced in any of the other camps in the world under 39 cents per ounce, and that the average is above 40 cents, the

The formation in Cobalt is unlike anything found in the world, with one exception, Saxony, where silver has anything feand in the world, with one exception. Saxony, where silver has been mined for centuries. The veins have a trend east and west, and are irregular in length, breadth and depth. The values oesur in narrow veins with streaks of wonderful richness, some of the ore running as high as 6,000 ounces in silver to the ton. In numerous instances veins are exountered running 2,000 ounces. When it is stated that ores running as high as 100 ounces to the ton are considered excellent milling ore in Mexico, and in many portions of the United State, and that ore in this wonderful exop of Canada running less than 150 ounces is classed as low grade, one can gain a fair idea of the high character of the Cobalt deposits. Cobalt deposits, the Cobalt camp several concen-

trating plants are running successfully, and more are being constructed. The result is that thousands of rons of ore, which farmerly went to the dump,

are now being treated very profitably. A great deal of rock in the side walls of these rich veins contains silver in small particles, which can be concentrated, and when it is stated that Cobalt has spent \$2,000,000 for modern machinery, and \$500,000 for mine buildings, it is readily seen that the camp has awakened to scientific methods. During the first two years only highgrade ore was shipped, and very little attention was paid to modern methods. attention was paid to modern methods

PUZZLES ENGINEERS.

"The Cobait formation is what has nuzzled mining engineers. They have seen astonished at its richness, and oute of them have insisted that there nust be a diminution in values because the ores were of such high grade. Ther is, however, no basis for any such con-clusion. Calculations based on a depti of 300 feat, continuing such values as have already been proved, certainly yield a total at which the mind stagers, but it is now generally conceded y those who are familiar with the ormation that there is no basis on thich to predict that these values will t 400 feet, 500 feet, or 1,600 feet become

NORTH BUTTE IS BREAKING. Boston Firm Said to Have Liquidated

Fully 15,000 Shares.

The following report relative to the condition of North Butte stock was reselved over Pollock's private wire from Boston this morning:

The decline in North Butte to 65% on heavy transactions has considerably disturbed the copper fraternity and the commission houses are making cager inquiries as to the cause. For several weeks observing brokers have declared that North Butte "has not acted right." It has been under pressure for some time and a Congress street commission house is credited with the liquidation of fully 15,000 shares during the last

In view of the fact that copper metal conditions are depressed the manage-ment may have decided to contract comewhat, the volume of output, and this ould necessarily endanger the present ate of dividend of \$1 per cuarter the est dividend at this rate having been declared Feb. 15. Another feature of North Butte situation is the fact that forthcoming annual report by reason of the shutdown in the early part of 1968 will not make a very flattering

exhibit and also the fact that the com-pling is short of working capital. The decline in the shares, while it rought out some liquidation, was as-isted by manipulative tactics and eforts were made in some cases to quetations as low as possible. Very little real stock came out at the low

WILL GET BUSY AT BEAVER,

Great Falls People Beturn from Trip

To Star District Property.

Several officials of the Great Falls Mining company, which owns 14 claims in the Star district, in Beaver county have returned from an inspection trip during which they were accompanied by a man from Duluth, who is said to represent a number of eastern people who are to become interested in the property.

At the property, Manager Winch, showed the men about the workings. The company has two shafts, one of which is now more than 100 feet deep and another which is not much over 30 feet deep on which more than 100 feet of crossoutting has been done. Samples were taken from all the enteroppings on the property and assays are being made. A detailed report will also be made. that the average is above 40 cents, the advantage which Cobait possesses is at once made plain.

"The production of silver in the Cobait personal to 18,000,000 ounces of the value of the year 1908 amounted to 18,000,000 ounces of the value of the property and assays are being made. A detailed report will also be made a detailed report will also be made. A detailed report will al

Fruncs are steady, and while some of the less desirable stock may be offered at concessions, attractive fruit particularly of the largest sizes, is very well-held. Quotafions range from 52 to 13 for new even California, and from 52 to 93 for Oregons range from 40-50x to 35-50s.

Peaches are unchanged, with choice quoted at 600%; extra choice, 6% great funcy, 708%. Raining are doll, with loose muscaleds quoted at 516.4%; choice to funcy seeded, 45.65%; seedless, Just's and London layers, 1.206.1.20. CHICAGO.

CHICAGO,

Chleago. April 15.—Notwithstanding that foreign news today was builted the wheat market here manifested considerable weakness eatily in the day, partendally the deferred futures which were subjected to quite general selling pressure. Shorts, however, were active bidders for the May option and that caused the price of that delivery to again touch 129, the high point of the season occorded yesterday. The opening was somewhat irregular, with prices is lower to 5 higher. May being at 1.23% to 128 and July at 1.17% to 1.18%. The origin of their mentil down to 1.17% but May after selling at 1.27% railled again to 1.27% results again to 1.27% results again.

Onts were firm couly in the day at light goins. May encode a smade to the highest at 15 to \$5'4, and for a me held within that range.

Provisions were easy owing to a location in five bogs. Prices at the opening were unchanged to light fice low-

Wheat—Toward midday the market ralded abarroly and priors advanced to new
