

MINING, BUSINESS AND STOCKS

PROSPEROUS TIMES AT YERINGTON

A. E. Kimball Returns From Western Nevada Camp Enthusiastic Over Its Future.

BIG NEVADA DOUGLAS MINE.

This Company Now In Shape to Make Rapid Progress—Showing In Outside Shaft.

After an absence of several weeks, during which time he has been pretty well over the Yerington, Nev., copper district, A. E. Kimball returned to the city this morning more convinced than ever that this western Nevada region will be the location of several of the biggest copper mines in the west if not in the world. Conditions in the camp are very prosperous at the present time and no district in Nevada, Mr. Kimball declared to a representative of the "News" today, presents a scene of greater activity. The owners of the various mines are pushing development work and that they have unbounded faith in the future is evidenced by the judicious manner in which it is being conducted. Machinery, minor equipment, is being brought into the camp and in a number of places it is in process of installation.

At the Nevada Douglas mine, which Mr. Kimball regards as being one of the greatest copper propositions that he has ever seen, practically all the mine equipment ordered some time ago is installed. The compressor has been set near the mouth of the main tunnel and is ready to start; but must await the completion of the electric power line being brought into the camp from a distance of about 30 miles. The poles and wires have been strung across Smith valley and the latest information from the front shows that the line will soon be ready for transportation of electrical energy.

Late developments at the Nevada Douglas mine have been of a highly satisfactory character, Mr. Kimball reports, and the showing made recently in what is known as the outside shaft are of a character which not only convince the most skeptical that the property has a very bright future. This shaft has been sunk in ore all the way down, and in recent sampling of the four sides and bottom gave returns of better than 9 per cent copper. Some very high grade ore has been encountered on the way down and specimen samples have assayed up to 30 per cent copper.

The tunnel is in over 500 feet and as soon as power is available for the operation of machine drills it will be pushed on into the mountain at a rapid pace. The company is pushing several new buildings and has just completed the erection of a new assay and office building and several cottages. The excavations for a new assay and office building are being made and material is coming in daily for several other structures.

The Bluestone company, which is controlled by Capt. Decker, is preparing to build a new mill plant for the treatment of its low grade ore; however, it is believed the actual construction will be begun in the fall, as the mill is built into the camp from a point near Wabasha.

The Mason Valley mine is looking fine. This company has also ordered several permanent mine buildings. At the western Nevada mine, operated under the direction of the engineers in the employ of the Nevada Douglas development work is progressing with satisfactory results.

ON MINING EXCHANGE.

Business Some Better Today—Little Doing Among Unlisted Stocks.

While business was some better on the mining exchange today, there was but little change from yesterday's prices. Beck Tunnel displayed weakness, and sales were quoted at \$1.55 and \$1.65. Sioux Consolidated was less active than it has been for several days, while Iron Blossom displayed considerable activity around 80 cents a share. Uncle Sam Consolidated came up in a little better form, as did Colorado and Columbia Consolidated.

Only three unlisted stocks participated in the day's transactions, these being Ohio Copper, Standard Copper and Copper Glance.

The closing quotations and sales were:

CHANGE AT THE YAMPA.

Smelter Superintendent Day Has Been Succeeded by Frank J. Murphy.

The resignation of A. M. Day as superintendent of the Yampa smelter at Bingham has been announced today. Mr. Day has been succeeded by Frank J. Murphy, who comes from Durango, Mexico, where he has been connected in a similar capacity with the Valverde Mining & Smelting company.

Mr. Day came from the Yampa Smelting company from Montana shortly before the retirement of former Manager Kelly about two years ago and at a time when the plant at Durango was giving anything but satisfaction. Under his administration it was completely overhauled, new equipment added, capacity increased and brought up to its present production of 600 tons of ore daily. Just what Mr. Day's plans for the future are, has not been ascertained.

MORE SMOKE SUITS.

Two Filled in Federal Court Yesterday Against Local Smelting Concern.

Two more smoke suits were filed in the federal court yesterday in giving the Utah Consolidated United States Smelting, Refining & Mining and Bingham Consolidated Mining & Smelting companies names as defendants. Judgment for damages aggregating \$50,000 are asked for and there are between 50 and 60 plaintiffs named in the complaint—the latter being owners of land in the vicinity of Murray and Taylorsville.

In one action, the complaint in which covers 75 closely typewritten pages, George M. Spencer of Taylorsville is the plaintiff of record, but 36 others have assigned to him their claims, and in their behalf he brings suit. The general allegation is that since January, 1905, up until the granting of the injunction against the smelting companies last fall by Judge Marshall, the smoke and fumes emitted from the smelting plants have damaged the crops and properties of the plaintiffs in sums varying from \$1.50 to \$250.

In the second complaint the plaintiff named is Julius Stephenson of Murray, and in behalf of himself and 19 others he claims damages in the sum total of \$32,472.37. In the complaint the same companies are named as defendants and the same allegations are made.

Judge W. H. King and Judge J. W. Burton are attorneys for the plaintiffs.

ALTA TUNNEL PROJECT.

Operators of Little Cottonwood Interested in Important Enterprise.

The Alta drain tunnel project is said to be rapidly assuming shape and it is not unlikely that work on the proposed bore is likely to be undertaken within the next few months. This tunnel has been practically admitted by President Tony Jacobson of the Columbia Consolidated Mining company, who has been a leading spirit in the framing of the tunnel enterprise.

Operators of Alta have realized for some time that the drainage of the district by this means would be one of the necessities to insure the permanency of the camp. While the undertaking will be an expensive one, it will prove in the long run to be a money maker when once completed, as it will not only enable the operation of the various mines at much greater depth than is possible at the present time, but it will become the outlet for ore from all the principal producers of the camp.

HE FIRED THE SHOT.

He fired the shot which I've carried with me ever since. It was a shot that I've carried with me ever since. It was a shot that I've carried with me ever since.

ROUGH ACTIVITY IN SEVEN TROUGHS

W. G. Robinson Comes in From Nevada Camp After Visiting Signal Peak Group.

DISTRICT OPENING UP FINE.

Building Activity Very Pronounced in The Several Mining Towns—Much High Grade Ore.

W. J. Robinson, president of the Seven Troughs Signal Peak Mining company, has just returned from Nevada. He has been inspecting his company's holdings. He returns highly elated at the showings made in the district by the different companies and especially that on the Signal Peak.

He reports that the district is opening up splendid ore bodies for a distance of seven miles. He has been inspecting his company's holdings. He returns highly elated at the showings made in the district by the different companies and especially that on the Signal Peak.

Isolation, and Manager Walter C. Orem said that this week an shaft will be put on tonight, thus bringing the plant up to its capacity.

TINTIC MINING NOTES.

Old Centennial Eureka Shaft Being Torn Down—Uncle Sam Mill.

The Raymond-Hill property was closed down temporarily on Wednesday, says the Eureka Reporter. Manager J. L. Sullivan states that the seepage of water has been giving the company a great deal of trouble this year, as the heavy rains have kept the water flowing into the upper levels of the mine. It was decided to close the mine down for a few weeks by which time the flow of seepage water will be stopped and work can again be taken up where it has been left off.

The work of tearing down the old shafthouse at the Centennial-Eureka mine started this week and the material for the new steel building will arrive within the next week or ten days. The day shift force at the mine has been reduced and work on the building will be done during the day. The night shift at the mine has been increased and most of the work on the building will be done at night during the time that the new building is being put up.

B. H. Bullock, the manager of the Bullock Mining company, operating near Silver City, says that another carload of ore will go out from the mine today or tomorrow. This is the third shipment of the Kocot property, assays which have been made should net the company about \$20 per ton, being richer than the other shipments.

The shaft on the Kocot property, assays which have been made should net the company about \$20 per ton, being richer than the other shipments. The shaft on the Kocot property, assays which have been made should net the company about \$20 per ton, being richer than the other shipments.
