to shift the blame to the shoulders of the railroad or any corporation. As i stands now the government is ready to listen to any reasonable offer for the performance of the work, but the men who have so far put in their figures appear to be laboring under the erron-eous impression that the government is compelled to put in a daily mail over this road, and have laid out their estimates accordingly. They have figured on what they

while ago it was the freight 'raffic

with that city which rassed out of our

hands, and now it oppears that the daily mail that har been taiked of so

long is going to go the same way. At this rate it will not be long until Man-

hattan is the protege of Austin rather

The fault for this latest loss, if it

actually does come about, will lie en-tirely with the people of the city them-

selves, and there will be no opportunity

At

gold.

thought they could get, not on what the work is actually worth as a basis, and have planned for themselves profits of a goodly magnitude. Over Austin way, the bidders appre-

clate the fact that the passenger and freight traffic is more than apt to folfreight traine is more than apt to for-low the mail line, and they entered their bids accordingly. As a natural result, they will continue to supply Manhattan not only a daily mail, but practically everything else it needs from the outside, and Tor the self-centered and self-sufficient, may take what satisfaction it can from the fact that it had the first chance at the job and turned it down.

THE COLUMBUS CON.

Striking of Ore on 300-Level Insures Permanency of Mine.

Local shareholders of the Columbus Consolidated received some cheering news from the Alta property of that corporation yesterday afternoon, which was to the effect that connection had been made with the ore bodies on the 300 level below the tunnel which establishes the fact that the ledges are go-ing down and that the mine may now safely be counted on as being one of the great bonanzas of the state.

For a time the management was kept guessing. The ore did not come in where it was expected owing to what has since proven to have been the in-trusion of a fault. Upon this point Manager Tony Jacobson has made the following statement:

"When the 300 level was reached, a cross-cut was started for the fissure which first led us into the contact on the levels above. It was cut after driving about 35 feet and the expectation was that the contact would be found close at hand. In the fissure about three feet of ore was cut that assayed 79.7 ounces silver, \$7.20 in gold and 16.9 per cent copper. Upon my return from California and after seeing some of the work done on that side of the shaft. I decided that the contact had been thrown back possibly 100 feet from the 0 back possibly 100 feet from the line it had occupied on the oppo-site side of the fissure and in the direction the chief ore bodies had made above, so I gave directions a short time ago to cross-cut from the other side of the shaft in the direction of the contact and for the time let the development on the fissure side go. figured that the contact ought to be cut on that side, unless it had thrown there, also, inside of 40 feet. The ledge was cut and the ore struck in feet, thus proving conclusively that the contact had been displaced at the point of instruction with the fissure These incidents are some mentioned. of the things in mining that have to be met and overcome; they supply the operation for several years. reasons why rational calculations often go awry and create unnecessary alarm. I was positive that no such ore bodies as had been developed above could play out in 100 feet and that was why I advised shareholders who sought my advice not to become alarmed. But that is enough to say. The mine is all right and it is new simply a question

of continuing development, mining and selling the ore. That will be carried along to the best of our ability." Manager Jacobson has engaged 42 four-horse teams to haul ore and from now on expects to send to the rampler about 60 tons per day, which, he figures, will bring the company around \$100,000 monthly. It is believed that the Columbus directors will post the initial dividead for payment in July.

of water. Mr. Gibbs spent many weeks on the property and opened six paralle veins, running in width of from a foot to 10 feet. He sank a number of prospect shafts, ran numerous open cuts and in all of the half dozen veins found free gold; Samples sent out car. rying in some instances sensational values in gold. Several members of the syndicate made an investigation of the ground and also sent a well known engineer to the scene to

two men whom he had employed to accompany him. After weeks of hard

work in the hills the party landed at Granite mountain and here Mr. Gibbs found some pronounced croppings of

quartz ledges. He prospected them and discovered the presence of free

claims and two placers, also a spring, which contans a never failing supply

Finally he located nine full lode

Dass on the property before going to the expense of incorporating a company. Everyone came back with a good re-port, so in November last an organization was effected and a few days before the close of 1906, development was inaugurated.

About two months ago the perma-nent work was undertaken in the shape of driving the tunnel referred to and which will cross-cut every one of the six veins showing on the surface at depths ranging from 125 to 800 feet. The Gold Butte bears the earmarks of a big mine and mining men whe have been there count on the Gold Butte district becoming one of the larg-est producers of gold in Nevada.

The Nevada Granite Gold Mines com-pany, the basis for which is a large group adjoining, has placed an order for equipment and will begin a vigor-ous campaign of development without delay. The Kimberly syndicate, in which several identified wth the Annie

Laurie mine at Kimberly are interest-ed, has about concluded arrangements for the organization a company and to begin permanent development work. The first registered letter sent out of the new Gold Butte postoffice arrived in Salt Lake yesterday.

MINES OF SEARCHLIGHT. The Cyrus Noble Mine is Now on a

Dividend Basis. Special Correspondence. Searchlight, Nev., May 30 .- The Cyrus Noble, one of the best of Searchlight's

producing mines, after expending large sum of money on development work and equipment has placed itself on a dividend paying basis. Search-light mines require the investment of nsiderable capital before they can he called producers, and the Cyrus Noble is no exception. It took the great Quartet six years of strenuous labor and the investment of hundreds of thousands of dollars before it was made one of the greatest, if not the greatest, gold mine in the southwest-ern United States. Under the direction of General Manager J. J. Prendergast the Cyrus No-ble has succeeded with two years of

active development work in demon-strating to the mining world that a Searchlight mine can be made to pay with a comparatively small prope tion of the expense of mining that has heretofore been found necessary. The mine is equipped with a new ten stamp mill crushing 35 tons of ore daily, a 40-horse power gasoline hoist and splendid office and residence buildings. The main working shaft is down 640 feet and about 2,000 feet of crosscuts and drifts have been run blocking out sufficient ore to keep the mill in

BEGINS RAISING STEEL.

The spection of steel at the Utsh Copper company's new concentrator at Garfield was begun today. Reports received at the company's offices in the McCornick block during the day were to the effect that the work of construction is moving along smoothly in every department

IN FROM MINERVA DISTRICT.

Charles Monaghan, formerly of Tintle but now superintendent of the proper-ties of the Spook Mining company, iccated in the Minerva mining district, near Osceola, Nev. Is in the city, and reports considerable activity in that camp. The ores of the district carry their principal values in gold and sli-

ity for several days before returning

It is believed that James F. Burns of

Cripple Creek is after more territory

The ore and bullion settlements reported late yesterday by McCornick & Company were as follows: Crude ore and concentrate, \$28,500; base bullion, \$45,000; gold buillion, \$7,600. The set-tlementsd uring the month of May aggregated \$2,066,600.

The big reduction works at the Ferris-Haggerty mine at Grand Encamp-ment, Wyo., are being rebuilt. The old works were destroyed by fire several months ago and since then the mine has been out of commission. A force of men was put to work on development work in the early part of the Week

President Weir of the Nevada-Utah Mines & Smelters corporation declared today that there is nothing he can give out at this time relative to the build-ing of the branch line of railroad from the tracks of the Salt Lake Route at Caliente to Pioche. But work at the various properties of th ecorporation are to be pushed vigorously from now

Samuel Warmbath, the Goldfield bro-ker, departed for the west last night with Fairview as his objective point, Before his departure Mr. Warmbath visited the offices of the Gold Butte ompany to take a look at the rich lot of samples sent in recently by Supt. Gibbs and declared that he had never seen anything better, taking them as a whole, anywhere in southwsetern Nevada.
