SNOW IN SOME COUNTIES.

sugar Beets and Early Potatoes are
Being Planted in Weber—Have
Been No Damaging Frosts.

Salt Lake City, Utah, April 24, 1900.—
The temperature of the week ending
April 23rd was considerably above the
normal with the exception of the last
two days which were quite cool. High,
drying southerly winds were general
the middle of the week. The latter half
was generally cloudy and precipitation
occurred over the State on the 21st and
22d. It began as rain on the evening of
the 21st, and continued through the
next morning, especially in the southern
part of the State, turned to snow. In
Utah, Sanpete and Sevier counties
about five inches of snow covered the
ground on the morning of the 22d. The
snow had become quite dry and the
precipitation was very beneficial. Sugar
beets are being planted and early po-
tatoes are being planted. Wheat
seeds are coming up to a good stand.
Early potatoes are also being planted.
The sowing of wheat and oats has been
completed, and both of these crops are
coming up well. Wheat is just
beginning to show. Fall wheat is
in excellent condition. No damag-
ing frosts occurred during the week.
The ground is now in a very dry
condition. There is now an excellent
prospect for a large crop of all kinds of
fruit.
