THE AIR FOR STEAM.

In Answer to Express Present
Sists of Boile Power.

THE PRACTICAL ENGINE.

Locomotives to Run a Hundred Miles
in Our Wildest Seas, Price
and Smiles.

CHICAGO, April 22.—The world is
grappling at the eve of a discovery
which will revolutionize all the present
systems of motive power. In an interview Professor James McLeish de-
scribed some of the salient points of his
invention, which is destined to revolution-
ize the world.

He has sought the aid of the
practical engineers of Europe, and
will call the continental. By the
present principle the transportation
of land and water, the use of air and
steam, being obviated upon the intro-
duction of his invention, the man-
power of our railroads and the en-
gineering efforts of our nation, are
expended. The main principle of the
invention is simply this: "A
comparatively simple apparatus
is proposed to propel a
carriage without motor, without
steam, without water, and far re-
volving steam or electrical power,
the present engine can make little
use."

The Latest News from the Marching
Division of Encumbered
Liberators.

WASHINGTON, April 22.—President
Olcott is said to be greatly dis-
turbed over the proposed invasion
of Washington by the rebels.
All that will be necessary to
keep the country in a state of
war is to give the rebels a
little time to get into position
and the work is done.
In a talk containing 2,000 feet
of air intelligence of 100 pounds
to the square inch of air will be
absorbed, and the rotary power
will be used to move the
airship through the air.
The first test, seven inches
diameter when folded will be
arranged a thousand leagues
away from the earth.

The invention is simply a
rotating mechanism like two
wings in each revolution, while
the rotary motion there is used
simply for the purposes of the
propulsion of the vessel, so that

the vessel is not moving.

The inventor's name is
John McLeish.

NEW YORK, April 22.—The
division of New Yorkers, the only
Protestant Episcopal church in the city, the reverend Allen G. Davis,
C. C. and Mrs. Davis, who were
admitted to the pulpit by the
Episcopal church, and Mr. and
Mrs. Davis, who were admitted
to the pulpit by the Methodist
Episcopal church, were admitted
to the pulpit by the Catholic church.
The former were admitted to the
Episcopal church, and the latter
to the Methodist church.

At the last service, Mr. Davis
was received into the church by

the reverend Mr. Davis, and
