Section Director. POULTRY EXPERIMENTS.

At the Utah Station Summary of Three Years' Results. The following press bulletin of the Utah Agricultural experiment station

gives a brief summary of three years sults of poultry experiments at th tall station, showing most profitable axis and manner of handling. The ullerin, No. 67, giving all details, can the station, Logan, Utah, Followins What is the most profitable age f the hen? Two pens of Leghorns veraged 175 eggs per fowl during the rst year. During the second year the

ame fowls averaged 1324, and during he third, 1164 eggs per fowl. The er cept profit on food was 188 the first ear, 118 the second, and 795g the third test with two other pens of Leg orns gave the following results: Firs ear, number of eggs laid, 159; second ear, 119%; per cent profit on food, first ear, 184, second year, 99. 2. What is the effect of exercise on egg production? The results for three years are in favor of feeding grain in

box against feeding it in straw an making the hens scratch it out. One pen with all grain fed in a box aver aged 147% eggs per fowl per year fo three years. A like pen having th grain fed in a litter of straw averaged 132 eggs. During the first year as pullets the results were in favor of the exercise, the pen fed in a box averaging 158 eggs per few! against 182 for the pen fed in the straw. These results were secured with Leghorns. With two other pens of Leghorns, during the first year as pullets the pen with "exercise" laid 160 eggs, and the pen with "no exercise," 157 eggs. During the second year the exercised' pen laid 110 and the "no exercise" 120, the results for the two years being practically the same for those two pens. 3. As to the effect of exercise on food

onsumption, the average of pens 3 and for three years shows that the per with "exercise" consumed 62.4 cent worth of food, and the pen "withou exercise," 60.8. In the case of two other pens the average was 63.5 cents and 62 cents respectively per fowl in favor of "no exercise. 4. During the year the Leghorns con-

sumed an average of 62 cents worth of food per fowl. The Wyandottes con-sumed \$1.6 cents per fowl, and two pens of Plymouth Rocks averaged 87.1 5. The Leghorns consumed during the year an average of about 75 pounds of total food or about 55 pounds of dry matter per fowl: the Wyandottes, 100 pounds total food, 73 pounds dry matter, and the Plymouth Rocks about 110

d. The three years' results from Legforn pullets show an average of 16 eggs her fowl per year at a food cost of 4.6 cents per dozen. These results are not from selected or "pedigree"

started to rain, they all took shelter in a house except little Don, who, being anxious to get home, declined the request of his friends to stay with them until the storm passed, and went on his way alone. When night came and he had not reached his home, a party of men went out to look for him. His about aighty members, with an occasional addition to the Church. ham's Vegetable Compound. "DEAR MRS. PINGHAM -- When I first wrote to you I was in a very bad concition. I was passing through the change of life, and the dectors said I had bladder and liver trouble. I had suffered for nine years. Doctors failed to do me any good. Since I have taken much. I will gladly recommend your madicine to others and am sure that it

I thought I would try your medicine. My trouble was change of life, and I must say that I never had anything help me so much as Lydia E. Pinkham's Vegetable Compound. Relief came almost immediately. I have better health now than I ever had. I feel like a new woman, perfectly strong. I give Lydia E. Pinkham's Compound all the credit, and would not do without her medicine for anything. I have recommended it to several of my friends. There is no need of women suffering so much for Mrs. Pinkham's remedies are a sure
