

MINING, BUSINESS AND STOCKS.

MINING EXCHANGE WAS OPENED TODAY

President James A. Pollock Delivered An Address Prior to Commencement of the First Call.

The elegant new building of the Salt Lake Mining Exchange was opened for business this morning with little ceremony. At the regular business hour before a full attendance of brokers and some visitors, President James A. Pollock delivered an address in which he expressed the pleasure he felt in witnessing the completion of the building, which was only his third speech since his return from Europe, and also a deep sense of gratitude to Mr. Samuel Newhouse, the donor of the ground, to the finance and building committees in charge of the enterprise, and to the architect and the contractor for their good work. The speech is as follows:

As the president of your association and in the name and on the behalf of the finance and building committees, I thank you all for the generous gift you have given me the high privilege of receiving this magnificent structure, and now in my turn I have the distinguished honor and pleasure of presenting this building to the members for their use and benefit hereafter. That this plan, cherished by me for nearly 20 years, has been accomplished during my incumbency as president of your association, is a matter of great pride to me, and the feeling of satisfaction is accompanied by a sense of deepest gratitude. I am grateful for the blessings that have made possible the endeavor to bring to such a successful and satisfactory conclusion this great enterprise. I am grateful in the first instance, and in the highest degree, to that broad minded man and public spirited citizen, Mr. Samuel Newhouse, whose munificent donation upon which the building stands gave us the means for the protection of this undertaking. I am grateful to the finance and building committee for their unselfishness in giving so freely of their time and energy in the work required, to secure the finances for the building and their ready and careful attention to the later duties involved. I am also deeply appreciative of the confidence displayed by the governing committee in their trust and cordial support, without which our success would have been impossible.

In congratulating the members of the exchange on the completion of their building, I wish to add my sincere gratitude for the hearty and unanimous support given by them. It also seems fitting to me to make mention of the men who have labored so faithfully with the building, Mr. Craig, the architect, and Mr. Armstrong, the contractor, and to express our thanks and sincere appreciation for their splendid work. We have a superior edifice here, one that is second to none in the country for the purposes for which it has been designed. It stands as one of the notable buildings of the city, in strict keeping with the modern needs of the community, and is a source of information about us, and such a striking setting for the future activities of the exchange should serve as a constant inspiration to every member of this institution, arousing the enthusiasm and determination of all to safeguard the good name and integrity of the association.

At this time we stand at the head of the mining stock exchanges of the country in volume of business and reputation. Having reached this point, let us maintain it. Let us always remember the objects of our association as laid down in the preamble of our constitution, part of which I quote: "For the purpose of inculcating just and equitable principles in trading, establishing and maintaining uniformly high trade usage, advertising services and disseminating valuable business information, especially as the same bears upon the mining industry of the Western States." If we live and act by this standard we will fulfill our duty to ourselves and will also maintain the confidence of the great public who look to us for guidance. Let us always give ear, cherish, and enjoy this respect and confidence, and that by the proper conduct of the affairs of this institution.

On the front of this building, carved in enduring stone, is the title of this association—Salt Lake Stock and Mining Exchange. Let each of us here and throughout receive this name shall forever stand for two words, honor and integrity. I have the pleasure of wishing each member of this board a long, a successful and a happy career.

OHIO COPPER STRONG.

Sale Made at Better Than \$5—Copper Weak—Daley Judge Firm.

The first call on the new mining exchange this morning was marked by a new low level for Colorado which went down to 50 ex-dividend. The stock closing price, which is inferred to be further decline may be looked for. Several stocks on the other hand were marked up a few points, among them being Daley Judge and Ohio Copper. The former sold up to 55 while a buyer of the latter went at \$5.10. Columbus moved up to 74 on good reports from the mine. Tom Johnson was also weaker than normal, having traded at no less than 61. A seller 60 to Sioux Con. down to 47 at which price 2,000 shares changed hands.

Among the smaller stocks Bullock showed the most strength. Its condition was much improved, sales being made up to 1% on the good reports from the mine. It was moved into the stronger as the result of the report from the mine that a change is being encountered in the workings.

Uncle Sam was weak at 46 as was Nevada Hills which went back to 75. New York was at 12, and Indian Queen was at 10. Ely Calumet, which was listed on the board today

was traded in at 40. Black Jack sold at 5 and Ajax loosened up 800 on a bid of 24. Addie also sold at 1% and 2. Closing quotations were as follows:

ITEMS OF INTEREST FROM TINTIC MINES

Grand Central and Victoria Dividends Anticipated—East Tintic Development Shipments.

Special Correspondence.

EUREKA, Nov. 13.—The money which is being paid over to the Grand Central and the money which is being realized from the sale of ore is fast putting the treasury of this well known Tintic property in splendid condition. The Victoria has for some time been shipping a splendid grade of ore from the 1,200 level, about 25 carloads already having been marketed this year. The Victoria has a healthy treasury and a fine showing of rich ore underground. These facts concerning the two properties warrant us again taking their places in the market again. The shareholders will receive some Christmas money in the shape of dividends, but just what amount of money will be paid out is not known at the present time.

The East Tintic Development company is pushing along the shipment of ore at a pretty good rate, five carloads having been shipped to the market yesterday which were received by the company on the first carload of the lot netted the company considerable better than \$700 after payment of freight charges. By the last of this month the drift on the 300 level should be in a sufficient distance to encounter the ore. On the other levels where the ore has been encountered it is opening up in fine shape, and the output of the property will be increased.

Another strike anticipated at the Pioche property because in the east drift on the 300 level the iron and manganese formations have been encountered. After cutting through the first ore on the 300 level the drift was pushed toward the east to cut the next level in which the largest deposits of ore should be found.

The company owns twenty-two claims in the Pioche or Ely district, most of which are in various stages of development. Work is already done on the property consists of 400 feet of shaft work, 450 feet of tunnels, 100 feet of wings, 75 feet of raises and 350 feet of crosscuts. At present there are 12 men at work on the property, which is located about one-third of a mile from the railroad. The ore contains copper, gold and silver, and there is said to be \$10,000 worth of it in sight in the property.

A. D. Myers is president of the company and J. K. Turner is secretary.

New York Stocks

Boston Coppers

Chicago Grain

Utah Stocks

Badger Brothers

160 Main St. Salt Lake City

Branch office, Eureka, Utah.
Members Salt Lake Stock Exchange. Direct wires to all markets of the world.

Will Sell

500 Independent Coal..... \$2
10 Kayville Brick 35
4 Utah Mex. Rubber Co. \$2.50
Will buy Elk Coal shares.

\$17,500 and others. The dividends paid to date by the different mines of the state are also given, making a very interesting showing. The book should be read by everyone interested in the mining industry.

ELY CALUMET LISTED.

Property Located in Ely District Has \$100,000 Worth of Ore in Sight.

The Ely Calumet Copper company was listed on the Exchange today. According to the report of the company on the application to the listing committee of the exchange, it is capitalized at 1,000,000 shares of the par value of \$1 a share. Of this amount 100,000 shares have been placed in the treasury, and there is still 123,014 shares unsold of that amount. The company has \$10,000 cash on hand, and no debts. The stock is nonassessable.

The company owns twenty-two claims in the Pioche or Ely district, most of which are in various stages of development. Work is already done on the property consists of 400 feet of shaft work, 450 feet of tunnels, 100 feet of wings, 75 feet of raises and 350 feet of crosscuts. At present there are 12 men at work on the property, which is located about one-third of a mile from the railroad. The ore contains copper, gold and silver, and there is said to be \$10,000 worth of it in sight in the property.

A. D. Myers is president of the company and J. K. Turner is secretary.

CONCENTRATES.

E. Augustus Heinz, the well known copper magnate, is expected to reach the city about 5 o'clock this afternoon.

Reports from the Biscuit Mining company property at Cherry Creek, Nevada, state that after driving through some hard formation in the drifts from the 900 level, the management has struck an 18-inch vein of ore similar in character to that which made money for the owners years ago.

The Humboldt Star states that the United States Smelting and Refining company are still figuring on the Lucky Boy and Mountain King group at Lucky Boy, although the owners have raised the price in the past few months from \$1,000,000 to \$2,000,000. General Manager Albin is said to have visited the property recently with J. F. Paxton Smith, the company's expert.

Daniel Guggenheim who has just returned from an extensive trip abroad is quoted as saying that the supply of 100,000 tons of copper in Europe is nothing more than normal. It is all said to be in licensed warehouses, and the market price is controlled by the law of supply and demand, though unlike other industries the supply cannot be curtailed without much loss in time when the demand is not brisk.

Reports from Arizona today state that E. C. Wickliffe and party expect to leave the Bay Con yesterday and arrive in Miami, near Globe, today. Tonight they will leave for the Chino mine in New Mexico, where they will stop until Thursday. After making an inspection of this property they will then leave for Garden City, Kansas, which place they expect to reach on Saturday next.

DEATH RATE AMONG CONSUMPTIVES DECREASED

New York, Nov. 16.—The annual report of Samuel Grabfelder of Philadelphia, president of the National Jewish hospital for consumptives at Denver, shows that the death rate among the patients treated had been decreased in 10 years from 7.8 per cent to 3% per cent. All the officers of the organization have been re-elected.

W. F. Hill, who has returned from inspection of his mining interests in Tintic, reports the uncovering of a gas pocket at the Ely Standard in the 200-foot level in the face of the 120-foot drift of a fine body of copper sulphide ore, on which assays are now being made, is very encouraging to the stockholders.

W. F. Hill, who has returned from inspection of his mining interests in Tintic, reports the uncovering of a gas pocket at the Ely Standard in the 200-foot level in the face of the 120-foot drift of a fine body of copper sulphide ore, on which assays are now being made, is very encouraging to the stockholders.

The strike in the Bullock on the 210-foot level in the face of the 120-foot drift of a fine body of copper sulphide ore, on which assays are now being made, is very encouraging to the stockholders.
