#### DALY-WEST DIVIDEND.

#### Strong Bellef-Exists That Directors Will Reduce it to 35 Cents.

Stockholders of the Daly-West Mining company have in most cases re-signed to the inevitable and anticipate a reduction in the dividend at the next regular sonthly meeting of the direc-tors on May 5. While there is no official information on the subject, the belief prevails generally that the reduction will be about fifty percent or from 65 to 35 cents a share.

# SCARCITY OF PLATINUM.

#### One of the Effects of the Russo-Japanese War Now Pending.

In a recent issue, reference was made to the possible influence of the war be-tween Japan and Russia upon the copper market, says the Engineering & Mining Journal. We now find that this war has had a decided effect on a minor, but still important, market, that for platinum. The call on the Russian reserves carried off a large number of the men who worked in the platinum placers of the Urals, reducing produc-tion to a great extent. The diminished supply accompanies increasing demand, so that a scarcity of platinum is prob-

# INTERESTING TO OIL MEN.

The Geological Survey Issues a Bulletin On Petroleum Production.

In Mr. F. H. Oliphant's report on the production of petroleum in 1902, published by the United States geological survey as an extract from its annual volume of Mineral Resources, a comprehensive account is given of the progress made in 1902 in all the oil fields of the United States and also of the year's development in all the other known fields of the world. This means a statement of the discoveries of oil and prospects for its develop-ment in Canada, Mexico, Cuba, Trini. the West Indies, the Central American states, Argentina, Brazil, Colombia, Ecuador, Peru, Venezuela, Russia, Austria-Hungary, Roumania, Germany, Italy, Great Britain, New South Wales, New Zealand, Algeria, Persia, the Dutch East Indies, the Philippine Islands, Japan, India, China, Hawaii and Korea Hawaii and Korea.

The world's production of petro-leum in 1902 amounted to 185,151,089 barrels. Of this the United States and Russia produced 91.44 per cent. For years Russia has led in point of produc-tion, but an increase of 19.377,722 barrels in the production of the United States In 1902 and a decrease in the production of Russia caused these two countries to change places, and put the United States at the head of the list, Our coun-

-\$2,500. road does not cost that amount, which probably it will not, they are willing to still unpatented. pay 75 per cent of the cost of building, if Custer county will donate 25 per cent. This is a good, fair proposition for the county. Loon creek and surrounding, country bids fair to be one of the very best mining regions in Idaho, but it is sadly in need of a wagon road to thereby develop its mining resourcs, for the days of pack-trains are past. Such a road would not only develop the mines of Loon creek but those of the great Sheep mountain and Seafoam regions. There will be a sielter put in by the

Lost Packer company at Loon creek just as soon as the road is built with sufficient capacity not only to treat the ores of Loon creek but those of Sheep mountain and Seafoa.n which are but a few miles distant, as well. We believe that it is to the interest of the county to held the road.

RIG NOW GOING UP.

### Union Company Will be Ready to Drill For Oil Next Week.

A force of men under the supervision of Chief Driller Wallace of the Union Gas & Pipe Line company began the work of setting up a derrick a short distance west of the rallroad stations at Centerville in Davis county. It is expected that the machinery will be in place and ready for operation by the end of next week.

ORE FOR SCHOOL OF MINES.

#### Shipment to be Made from the Oash Mine in Drum District.

The management of the Oasis Gold & Copper Mining company, operating in the Drum mining district, has decided to make a shipment of ore from that property to the state university for testing in the laboratory of the school of mines Several methods of treatment will be tried

DEATH OF O. M. LADD.

#### Well Known Representative of the C. F. & I. Company Expires in Pueblo.

The news of the death of O. M. Ladd, which occurred in Pueblo a few days ago, has been received in this city with the most profound regret. Col. Ladd. as he was familiarly known, was the resident field representative of the Colorado Fuel & Iron company and it was through his energies that the big orado concern was able to secure such extensive holdings in the iron districts of Iron county. The cause of his death was appendi-citis. The deceased was sick but a short time and was operated upon by the most skillful of surgeons in the Centennial state, but the disease was

not checked in time and he could not survive.

#### Big Mining Suit Filed.

A Portland, Or., dispatch under yes. erday's date says: Suit for eastern Oregon mining proprtles valued at \$6,000,000 was instituted in the United States district court to-day by the Iron Dyke Copper Mining company of South Dakota. The suit is directed against the Iron Dyke Railroad ompany et al.

The Iron Dyke Railroad company is a Baker county, Or., corporation, whose principal stockholders are residents of Erie, Erie county, Pa. In the bill in equity filed against them the plaintiffs ask for damage to the amount of \$6,-500,000, or the mining property which it alleges belongs to it, and which is in the ontrol of the respondents.

# UTAH SELLS ORE.

#### A 45-Ton Lot Settled for on Controls Showing 103.2 Ounces Silver.

The management of the Utah mine f Fish Springs made a settlement today with the smelters for a 45-ton lot of ore. The controls showed values to the amount of 105.2 ounces silver and 50.3 per cent lead.

## SOME GOOD ASSAYS.

#### Ore from the Pioche-Nevada Consolidated Shows Some Fine Values.

The local officials of the Pioche-Nevada Consolidated Mining company ex-pressed much delight today over the results of assays made on ore brought from camp by Frank Gardner last Sun-The ore came from the Talisman day. claim out of a two-foot streak. A sample tak n from one side of it went 880 ounces silver, 1.24 ounces gold and 46 per cent lead. Another taken from the other side assayed 26 ounces silver and 78.9 per cent lead.

#### Midas Mill Started.

The Midas mili in the Deep Creek country was placed in commission on the 14th inst. It is treating, so Manthe 14th inst. ager James Chipman said this morning, about 25 tons of ore daily from which satisfactory results are being ob-

In the morning to find that Jack Frost has robbed him in a single night of his year's dependence. From the first to the middle of May is the usual time for setting the plants in the field. The soil in the beds is wat-ered heavily and the plants taken up in squares of dirt and hauled to the field in wagons, where they are set about three or four feet apart each way in hills, in each of which is usually sprinkled a handful or so of some kind of commercial fertilizer, either castor bean pomace, known as castoria, or some one of the many preparations on the market. Culti-vation with the double shovel is begun immediately, sometimes commencing at one side of the field before the setting is finished at the other. The double shovel is run through both ways five or six times. Directly after being set in the field a stake about four feet high is driven beside each plant and as the plant grows it is tied up to this stake to keep the fruit off the ground and to facilitate picking.—Farm News. CALIFORNIA EXCURSIONS Via Oregon Short Line. Round trip to San Francisco or Los Angeles from Salt Lake, \$36.50 via Og-den both ways, or \$47.50 going via Og-den and returning via Portland or vice versa. TROY LAUNDRY, Telephones 192 and 193. 166 Main St.

About the first of the year he begins firing. From the first to the 20th of February he sows his seed in rows about two inches apart. The plants are ready for the first transplanting in about a month and are set about three inches apart both ways. The second trans-planting is done in aboi. three weeks after the first, this time five or six inches of space being allowed between the plants. Sash made for the purpose has almost entirely superseded the old style canvas as covering for the beds, as it gives the plants the benefit of the sun on days too cool for air to be admitted free-ly into the beds. But in severe weather, some of which usually occurs in February and March, straw and canvas are used in addition to the sash at night and removed to admit the sun during the day, and woe unto the shiftless man who neglects to cover his beds some night and wakes up in the moriling to find that Jack Frost has robbed him in a single night of his year's dependence.

Some pleasing developments are re-ported from the Giles property in the
